DOCUMENT RESUME

ED 030 001 VT 008 784

Microfiche Collection Of Clearinghouse Documents Reported In Abstracts of Research and Related Materials in Vocational and Technical Education (ARM), Spring 1969.

Ohio State Univ., Columbus. Center for Vocational and Technical Education.

Spons Agency-Office of Education (DHEW), Washington, D.C.

Pub Date 69

Note-6,921p.

EDRS Price MF-$25.00 HC Not Available from EDRS.

Descriptors-*Annotated Bibliographies, Clearinghouses, *Educational Research, Indexes (Locaters), Information Dissemination, Resource Materials, *Technical Education, *Vocational Education

Documents announced with VT numbers only in the Spring 1969 issue (VT 008 751) of "Abstracts of Research and Related Materials in Vocational and Technical Education" (ARM), are included in this microfiche set. Microfiche availability for these documents is shown on the ARM resume as MF AVAILABLE IN VT-ERIC SET. The microfiche set is arranged in the following sequence: (1) a Vocational Technical (VT) number index to documents in the microfiche collection, (2) the author index, the vocational and supporting services index, and the subject index from ARM, and (3) the full text of documents listed in the Vt number index. The texts are filmed continously in VT number sequence. (BS)

INTRODUCTION

This collection of microfiche consists of the documents which are announced with VT number only in the Spring 1969 issue of Abstracts of Research and Related Materials in Vocational and Technical Education (ARM). Microfiche availability is shown in the resume as MF AVAILABLE IN VT-ERIC SET. The documents are grouped in VT number sequence and filmed continuously as a microfiche set. These documents are not available on microfiche as individual items, but are obtainable only through purchase of this set, or from agencies who have this set and have the capability of reproducing microfiche. The microfiche set includes the following sections:

1. Vocational Technical (VT) Number Index to Microfiche Collection of Clearinghouse Documents Reported in ARM, Spring 1969.

2. Selected indexes from ARM, Spring 1969.

   a. Personal and Institutional Author Index.
   b. Vocational and Supporting Services Index.
   c. Subject and Identifier Index.

   The documents identified in the indexes with an ERIC Document (ED) number are usually available as separate documents from the ERIC Document Reproduction Service (EDRS). Information about EDRS Service can be found in ARM or RIE. Items not available through EDRS will include a source of availability. The page numbers shown in these indexes refer to the location of the abstracts in ARM, Spring 1969.

3. The full text of documents listed in the Vocational Technical (VT) Number Index to Microfiche Collection of Clearinghouse Documents Reported in ARM, Spring 1969.

A Program of Curricula Evaluation and Certification Procedure.

DRIVER EDUCATION
VT 000 876 ED 016 033 574
Immediate Learning Reinforcement in a Complex Mental-Motor Skill (Driver Training).

DROPOUT PREVENTION
VT 001 969 ED 019 425 536
The Tragic Migration--School Dropouts.
VT 006 865 489
School to Employment Program (STEP).

DROPOUT PROGRAMS
VT 005 447 ED 022 033 546
The School Environment and Its Influence on Educational Programs for High School Dropouts. Interim Report.

DROPOUT REHABILITATION
VT 003 955 ED 021 979 538
The Rehabilitation of School Dropouts in Oklahoma City: An Experimental Appraisal.

DROPOUTS
VT 000 884 558
Attitudes and Motives of MDTA Trainees: A Pilot Investigation.
VT 001 969 ED 019 425 536
The Tragic Migration--School Dropouts.
VT 003 955 ED 021 979 538
The Rehabilitation of School Dropouts in Oklahoma City: An Experimental Appraisal.

ECONOMIC FACTORS
VT 004 547 ED 020 339 524
The Development of an Instrument for Measuring the Understanding of Profit-Maximizing Principles.
VT 006 271 ED 023 846 488
Vocational Education Improvement Act Amendments of 1967. Part 1.

ECONOMIC OPPORTUNITY ACT PROGRAMS
VT 004 567 ED 023 809 481
Handbook for Sponsors.

ECONOMIC RESEARCH
VT 007 438 ED 023 937 492
Review and Synthesis of Research on the Economics of Vocational Education.

ECONOMICALLY DISADVANTAGED
VT 001 969 ED 019 425 536
The Tragic Migration--School Dropouts.
VT 004 222 541
Population Data and Community Self Surveys for the Planning and Operating of Youth-Work Programs.
VT 005 776 ED 021 130 547
A Study of Factors Associated with Outcomes of MDTA Agricultural Education Projects in the Somerset Area.
VT 006 760 ED 023 875 548
Annotated Bibliography of Publications and Reports Resulting From Southern Regional Cooperative Research Project S-44.

ECONOMICS
VT 004 307 ED 019 475 550
A Teacher's Guide to Economics in the Business Education Curriculum.
VT 006 525 ED 022 056 497
An Experimental Junior High School Course in Occupational Opportunities and Labor Market Processes.

EDUCABLE MENTALLY HANDICAPPED
VT 004 237 ED 016 116 542
Vocational Rehabilitation for Mentally Retarded Pupil-Clients. Summary.

EDUCATION
VT 000 808 ED 019 396 536
Raising Low Incomes Through Improved Education, A Statement on National Policy.

EDUCATIONAL ADMINISTRATION
VT 000 872 466
Summary of Conferences on Professional and Leadership Development for West Virginia County Vocational Supervisory Personnel, 1966.

EDUCATIONAL BACKGROUND
VT 000 675 ED 018 545 466
The Future Farmer of Today is the Successful Farmer of Tomorrow.
VT 006 723 ED 023 873 529
Influence of High School Vocational Agriculture on the Matriculation, Graduation, and Employment of Agricultural Engineering Graduates from the Iowa State University of Science and Technology.

EDUCATIONAL BENEFITS
VT 003 415 576
Apprenticeship, An Answer to Training Needs of Business.
VT 007 438 ED 023 937 492
Review and Synthesis of Research on the Economics of Vocational Education.

EDUCATIONAL CHANGE
VT 006 151 487
New Designs in Vocational, Technical, and Practical Arts Education in the Public Schools.

EDUCATIONAL EQUIPMENT
VT 000 848 532
Suggestions Pertaining to Space and Equipment for Post-High School Technical Programs.

SUBJECT AND IDENTIFIER INDEX

Page

VT 002 773 533
The Home Economics Department, Its Equipment and Furnishings, Supplement.

EDUCATIONAL EXPERIMENTS
VT 002 912 ED 017 670 550
Technological Change and the Journeyman Electrician, An Experimental Study in Continuing Education. Volume II, Course and Supplementary Materials.
VT 002 914 ED 017 671 575
Technological Change and the Journeyman Electrician, An Experimental Study in Continuing Education. Volume I.

EDUCATIONAL FACILITIES
VT 001 631 ED 018 602 532
Guidelines for Realistic Facility Planning for Schools of Vocational, Technical, and Adult Education.
VT 002 902 ED 020 320 533
Nursing Education Facilities, Programing Considerations and Architectural Guide.
VT 004 337 ED 021 991 533
A Pictorial Guide to Aid in Planning Business and Distributive Education Classrooms and Facilities.
VT 004 399 533
Implications of the Richmond Plan, Pre-Tech Labs and the Comprehensive Secondary School.
VT 004 506 ED 022 001 534
Educational Specifications for Pre-Technology Facility.
VT 005 439 ED 020 422 534
A Guide for Projecting Space Needs for Schools of Nursing.

EDUCATIONAL IMPROVEMENT
VT 001 309 471
Strengthening Vocational Education in San Joaquin County. Phase II, Planning for Implementation.
VT 005 454 ED 019 500 484
Education for a Changing World of Work, Report of the Panel of Consultants on Vocational Education.

EDUCATIONAL INNOVATIONS
VT 005 026 ED 023 818 482
Demonstrating Innovations in Vocational Education.
VT 006 151 487
New Designs in Vocational, Technical, and Practical Arts Education in the Public Schools.

EDUCATIONAL NEEDS
VT 000 556 500
The Greenhouse Grower: Analysis of Training Needs and Career Information for Instructional Planning.
VT 000 984 467
Meeting Employment Needs; A Research Study.
VT 000 986 468
Kent County Vocational-Technical Education Survey.
VT 000 987 468
Berrien County Vocational-Technical Education Research Study. Final Report.
VT 001 079 468
A Survey of Vocational, Technical, and Adult Education Needs in Monroe County.
VT 001 102 469
Cass County Study of Vocational-Technical Education.
VT 001 108 469
Ottawa Area Vocational-Technical Education Needs.
VT 001 109 469
Macomb Occupational Education Survey.
VT 001 110 470
Area Vocational-Technical Study.
VT 001 292 470
Education and Employment; A Study of the Needs for Vocational-Technical Education.
VT 002 737 473
A Study of Post High School Education Needs in Bucks County, 1968-1980. Phase I Progress Report.
VT 003 568 507
Competencies in Farm Credit Needed by Farmers.
VT 003 576 507
Competencies Needed by Farm Credit Agency Employees.
VT 003 578 507
Competencies in Livestock Marketing Needed by Farmers.
VT 003 642 478
Manpower and Training Needs of the Food Service Industry, Report of a National Conference.
VT 003 695 508
Agri-Business Competencies.
VT 004 118 ED 021 982 495
Curriculum in Food Handling and Distribution; A Guide for Experimentation in High School and Post High School Vocational Training.
VT 004 548 ED 020 340 561
The Educational Needs of Beginning Farm Operators in Becoming Established in Farming in New York.
VT 004 913 481
Report to the Government of Libya on Vocational Training.
VT 005 249 483
Educational Activities within Business-Industry; Implications for Public Education.
VT 005 442 ED 018 672 483
Final Report of the Study of Post High School Education Needs in Bucks County, 1968-1980. Volume I.
VT 005 443 ED 018 673 484
Final Report of the Study of Post High School Education Needs in Bucks County, 1968-1980. Volume II.
VT 005 454 ED 019 500 484
Education for a Changing World of Work, Report of the Panel of Consultants on Vocational Education.
VT 007 159 ED 023 898 529
Farm Business Record and Analysis Systems of Iowa Farm Operators.
VT 007 173 ED 023 902 529
The Potential of Vocational Education: Observations and Conclusions Based on a Study of Three Selected Cities in Pennsylvania.
VT 007 237 ED 023 909 491
The Relationship of ADP Training Curriculum and Methodology In Federal Government.
VT 007 256 ED 023 916 556
Procedure for Determining Vocational Education Needs Through Community Analysis.

EDUCATIONAL OPPORTUNITIES
VT 003 871 510
Employment Opportunities and Training Needs for Skilled Workers in the State of Missouri with Projections through 1970.

EDUCATIONAL PHILOSOPHY
VT 001 306 ED 019 398 471
Education for a Changing World of Work, Report of the Panel of Consultants on Vocational Education. Appendix III.

EDUCATIONAL PLANNING
VT 001 292 470
Education and Employment; A Study of the Needs for Vocational-Technical Education.
VT 004 222 541
Population Data and Community Self Surveys for the Planning and Operating of Youth-Work Programs.
VT 005 315 ED 022 896 555
Methods of Forecasting Manpower Requirements With Special Reference to the Province of Ontario.

EDUCATIONAL POLICY
VT 000 808 ED 019 396 536
Raising Low Incomes Through Improved Education, A Statement on National Policy.
VT 006 271 ED 023 846 488
Vocational Education Improvement Act Amendments of 1967. Part 1.
VT 006 272 ED 023 847 488
Vocational Education Improvement Act Amendments of 1967. Part 2.
VT 006 273 ED 023 848 488
Vocational Education Improvement Act Amendments of 1967. Part 3.

EDUCATIONAL PRINCIPLES
VT 000 872 466
Summary of Conferences on Professional and Leadership Development for West Virginia County Vocational Supervisory Personnel, 1966.

EDUCATIONAL PROBLEMS
VT 005 996 ED 023 840 487
Vocational and Technical Education.

EDUCATIONAL PROGRAMS
VT 001 796 472
Education for a Changing World of Work. Summary Report of the Panel of Consultants on Vocational Education Requested by The President.
VT 003 642 478
Manpower and Training Needs of the Food Service Industry, Report of a National Conference.
VT 004 088 ED 015 310 539
Parent Report After Second Year's Operation. Cooperative School-Rehabilitation Center.
VT 004 101 ED 015 321 540
Oak Glen, A Training Camp for Unemployed Youth.
VT 005 294 ED 023 821 483
Resources Available to Member States for the Advancement of Women.

EDUCATIONAL RESEARCH
VT 002 489 ED 023 789 472
Proceedings, Regional Seminar and Research Conference in Agricultural Education.

A Developmental Program for the Improvement of Trade-Technical Teacher Education in the Southern States, Eight Month Follow-up Study.

INSTRUCTIONAL MATERIALS
VT 006 525 ED 022 056 497
An Experimental Junior High School Course in Occupational Opportunities and Labor Market Processes.
VT 007 268 ED 023 918 551
In-Service Training in Computer-Assisted Instruction for Vocational Teachers.

INSTRUCTIONAL MEDIA
VT 004 609 ED 021 056 577
Techniques for Effective Teaching.

INSTRUCTIONAL TECHNOLOGY
VT 005 549 ED 019 512 550
The Development and Testing of a Polysensory Instructional System for Teaching Knowledges and Skills Associated with the Use of Expandable Polystyrene Plastics.

INSTRUCTOR COORDINATORS
VT 000 929 566
Careers in Distributive Education.
VT 005 430 ED 020 421 569
A Case Study of Weaknesses in Coordination Practices.
VT 005 869 ED 021 137 571
In-Service Education of Office Occupations Teacher-Coordinators. Final Report.

INSTRUMENTATION
VT 001 020 566
Recent Developments in Technical Education; Report, Summer Institute, Instrumentation, 1966.

INTEGRATED CURRICULUM
VT 005 026 ED 023 818 482
Demonstrating Innovations in Vocational Education.
VT 005 800 ED 020 443 486
ES '70 News. Volume I, No. 1.
VT 005 801 ED 020 444 486
ES '70 News. Volume I, No. 2.

INTELLIGENCE FACTORS
VT 002 168 ED 022 844 560
A Study of the Effect of Physical Maturity and Intelligence on the Manipulative Performance of Junior High School Students.

INTELLIGENCE QUOTIENT
VT 001 924 ED 019 421 560
A Study to Compare IQ Scores of Selected South Carolina High School Freshmen Enrolled in Vocational Agriculture with Those not Enrolled.

INTERAGENCY COORDINATION
VT 004 245 ED 016 121 543
The San Antonio Rehabilitation-Welfare Report on Research and Demonstration Project RD 1513.

INTERDISCIPLINARY APPROACH
VT 007 130 ED 023 892 491
Research and Development in Vocational and Technical Education: Non-Metropolitan Areas. Appendix Two.
VT 007 131 ED 023 893 491
Research and Development in Vocational and Technical Education: Non-Metropolitan Areas. Appendix One.

INTEREST TESTS
VT 001 811 ED 019 404 520
Occupational Aspiration Scale for Females.

INTERNATIONAL ORGANIZATIONS
VT 005 294 ED 023 821 483
Resources Available to Member States for the Advancement of Women.

INTERSTATE CONFERENCE ON LABOR STATISTICS, STORRS, CONNECTICUT, JUNE 15-18, 1965.
VT 004 269 480
Proceedings of Interstate Conference on Labor Statistics, (23rd, Storrs, June 15-18, 1965).

ITEM ANALYSIS
VT 001 437 ED 018 575 559
Item Analysis of the Development Pool of Items for the Youth Opinion Questionnaire. Minnesota Studies in Work Attitudes. Technical Report 1.

JOB ANALYSIS
VT 005 184 ED 018 665 513
Clusters of Tasks Associated with Performance of Major Types of Office Work. Final Report.

JOB APPLICANTS
VT 001 082 501
Manpower Resources of Burnett County, Wisconsin.
VT 001 085 501
Manpower Resources of Washburn County, Wisconsin.

JOB DEVELOPMENT
VT 003 799 509
A Handbook for Leaders.

JOB LAYOFF
VT 003 231 504
The Impact of Layoff and Recall at Ford-Windsor.

JOB PLACEMENT
VT 000 941 518
Pennsylvania Meets the Challenge of Retraining; Case Studies of a Three-Pronged Attack.
VT 001 275 503
A Preliminary Study of Orange County's Junior College Occupational Curricular Needs.

JOB SATISFACTION
VT 003 310 ED 023 799 506
Viable Farmer-Worker Relationships: A Study of Selected Cases in New York State in 1966.
VT 004 734 ED 020 376 524
Vocational Education Completed by East Central Wisconsin Graduates and Selected Employment Factors.
VT 007 374 ED 023 930 564
The Effects of On-the-Job Counseling on Employers' Rating and Job Satisfaction of Persons Trained in Selected Oklahoma MDTA Classes during 1967-68.

JOB SKILLS
VT 000 556 500
The Greenhouse Grower: Analysis of Training Needs and Career Information for Instructional Planning.
VT 003 568 507
Competencies in Farm Credit Needed by Farmers.
VT 003 576 507
Competencies Needed by Farm Credit Agency Employees.
VT 003 578 507
Competencies in Livestock Marketing Needed by Farmers.
VT 003 695 508
Agri-Business Competencies.
VT 004 387 510
Mathematics and Science Competencies for Technicians.
VT 004 606 ED 023 810 511
An Analysis of Occupational Titles and Competencies Needed in Off-Farm Agricultural Supplies Businesses.
VT 005 544 ED 019 511 550
Evaluating the Efficiency and Effectiveness of Self-Instructional Methods for Selected Areas of Vocational Education.

JOB TRAINING
VT 002 817 ED 018 610 504
Reports of Subcommittees of the President's Committee on Youth Employment.

SUBJECT AND IDENTIFIER INDEX

Page

VT 003 427 476
Vocational Rehabilitation, Developing Needed Manpower.
VT 004 221 541
Issues and Problems in Integrating Needed Supportive Services in Neighborhood Youth Corps Projects.

JUNIOR COLLEGES
VT 001 271 519
Follow-Up Studies in Junior Colleges; A Tool for Institutional Improvement.
VT 001 272 470
Technical Education in the Junior College; New Programs for New Jobs.
VT 001 273 503
A Preliminary Study of Orange County's Junior College Occupational Curricular Needs.
VT 005 000 482
Associate Degree Education for Nursing.

JUNIOR HIGH SCHOOL STUDENTS
VT 002 168 ED 022 844 560
A Study of the Effect of Physical Maturity and Intelligence on the Manipulative Performance of Junior High School Students.

JUNIOR HIGH SCHOOLS
VT 004 553 ED 020 342 481
The Role of Prevocational Agriculture in the Junior High Schools of New York State.

LABOR ECONOMICS
VT 004 269 480
Proceedings of Interstate Conference on Labor Statistics, (23rd, Storrs, June 15-18, 1965).

LABOR FORCE
VT 001 082 501
Manpower Resources of Burnett County, Wisconsin.
VT 001 085 501
Manpower Resources of Washburn County, Wisconsin.
VT 001 124 502
Analysis of Occupational Trends in Kentucky from 1950 to 1960 with Projections to 1975.
VT 001 253 502
North Carolina Study of Manpower Needs in Selected Trade, Finance, Insurance, and Service Industries, 1963-1966.
VT 004 271 ED 023 806 510
Manpower Trends in Canada: Chartbook.

LABOR FORCE NONPARTICIPANTS
VT 004 081 ED 015 305 539
A Study--Those Not Working in a Tight Labor Market, Milwaukee, Wisconsin.

LABOR MARKET
VT 003 434 506
The Next Twenty Years; A Forecast of Population and Jobs in the New York-New Jersey-Connecticut Metropolitan Region, 1963-1985.
VT 004 010 538
The Negro Labor Market in Chicago, 1966.

A Pilot Program to Test the Feasibility of Increasing the Number of Vocational and Technical Education Scholarships in Tooele County, Utah.

SCHOOL DISTRICTS
VT 007 128 ED 023 890 490
Research and Development in Vocational and Technical Education: Non-Metropolitan Areas. Appendix Four.

SCHOOL INDUSTRY RELATIONSHIP
VT 002 146 ED 021 966 536
Workshop for Counselors and Educators Concerned with the Education, Training and Employment of Minority Youth. Final Report, Part I, Development, Program, Evaluation.
VT 003 422 475
Local Technical Schools, An Answer to Training Needs of Business.
VT 003 423 475
Experienced Vocational-Technical Teachers, An Answer to Training Needs of Business.
VT 007 124 490
Report of an Area-Wide Conference on Occupational Education--A System for Manpower Development (Tucson, Arizona, May 16, 1968).

SCHOOL PLANNING
VT 001 631 ED 018 602 532
Guidelines for Realistic Facility Planning for Schools of Vocational, Technical, and Adult Education.

SCHOOL SHOPS
VT 000 942 532
Principles for Arranging, Mounting and Storing Hand Tools in Industrial Arts Shops.

SCHOOL STATISTICS
VT 001 796 472
Education for a Changing World of Work. Summary Report of the Panel of Consultants on Vocational Education Requested by The President.

SCHOOL SURVEYS
VT 004 119 510
Instituting a Vocational Major in Natural Resources.
VT 005 550 ED 022 040 496
Dental Assisting Education in California.

SCHOOL TO EMPLOYMENT PROGRAM
VT 006 865 489
School to Employment Program (STEP).

SCIENCES
VT 002 336 ED 019 438 580
Scientific and Technical Societies Pertinent to the Education of Technicians.

SELF CONCEPT
VT 004 612 ED 021 057 496
Managerial Perception and Success in Farming. Research Series in Agricultural Education.

SELF EVALUATION
VT 003 273 521
Evaluation of Your Cooperative Distributive Education Program.
VT 007 161 ED 023 900 529
Self-Initiated Evaluation of State Teacher Education Programs in Vocational Education.

SEMANTICS
VT 002 344 ED 022 846 575
Semantic Differential Analysis of Teacher and Youth Communication in Vocational Agriculture.

SEMINARS
VT 002 489 ED 023 789 472
Proceedings, Regional Seminar and Research Conference in Agricultural Education.

SERVICE OCCUPATIONS
VT 003 799 509
A Handbook for Leaders.
VT 003 869 509
Employment Opportunities and Training Needs for Selected Service Workers in the State of Missouri with Projections through 1970.

SEWING MACHINE OPERATORS
VT 006 662 ED 022 059 528
Power Sewing Study.

SEX DIFFERENCES
VT 001 909 ED 019 417 560
Reasons for Selection of Expected Occupations--By Race and Sex.

SIMULATED ENVIRONMENT
VT 000 876 ED 016 033 574
Immediate Learning Reinforcement in a Complex Mental-Motor Skill (Driver Training).

SIMULATION
VT 004 236 MP 000 346 576
The Use of Simulated Experiences in Teaching Community Dentistry.

SKILL DEVELOPMENT
VT 005 549 ED 019 512 550
The Development and Testing of a Polysensory Instructional System for Teaching Knowledges and Skills Associated with the Use of Expendable Polystyrene Plastics.

SKILL OBSOLESCENCE
VT 005 622 ED 023 832 514
The Effects of Automation on Occupations and Workers in Pennsylvania.

SKILLED OCCUPATIONS
VT 003 871 510
Employment Opportunities and Training Needs for Skilled Workers in the State of Missouri with Projections through 1970.

Guidelines for Evaluating Secondary Vocational Programs in Ornamental Horticulture.

New York State Education Dept., Albany
New Hampshire Univ., Durham. Dept. of Agricultural Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 65 29p.

*HORTICULTURE; *VOCATIONAL AGRICULTURE; *PROGRAM EVALUATION; *PROGRAM PLANNING; *BUIDELINES; HIGH SCHOOLS

Three interstate conferences were held to develop evaluation guidelines for secondary education horticulture programs. Conference participants were representatives of operating horticulture programs in New Hampshire, Massachusetts, Pennsylvania, New York, and Connecticut. The report of their efforts is presented in three sections: (1) Planning for Organizing Programs, (2) Evaluation of Instruction in On-Going Secondary Horticulture Programs, and (3) Utilization of the Results of Program Evaluation. The first section outlines procedures for goal establishment, clientele and staff determination, organization, student selection, work experience programs, facilities, coordination, and teacher selection. Evaluation procedures are outlined for congruency of operations and goals, selection practices, instruction, work experience, facilities, and professional staff improvements. Among suggestions for utilizing results of program evaluation are outcome evaluation, data classification, emerging goal appraisal, goal establishment, and decision making. A bibliography of materials relating to the organization of horticulture programs contains lists of books, publications of the government, learned societies, and other organizations, periodicals, and unpublished material. Foreword

A paper presented at the North Atlantic Regional Agricultural Education Conference at the University of Maryland, by Professor William H. Annis in November, 1964, and the subsequent discussion of its content highlighted the need for interstate cooperation in the development of program evaluation procedures and guidelines in the emerging field of ornamental horticulture.

In his paper, Dr. Annis told of an attempt to establish a new secondary horticulture program and the problems presented due to the lack of definite guidelines for the establishment and evaluation of such programs. As a result, three interstate conferences were held, one in the spring of 1965, one in the fall of 1965, and one in the spring of 1966. The purpose of these meetings was to develop evaluation guidelines for secondary horticulture programs which could be used by schools to establish new programs or measure the success of programs already in operation. The conferences were sponsored by the Department of Agricultural Education, University of New Hampshire, and the Bureau of Agricultural Education in cooperation with the Bureau of Occupational Education Research of the State Education Department of New York.

Participating in the first conference, held at the University of New Hampshire in Durham, were representatives from operating horticulture programs in New Hampshire and Massachusetts. Among those present were: Phillip S. Barton, Director of the Thompson School of Applied Science, University of New Hampshire; Robert Kennedy, Associate Professor of Plant Science, Thompson School of Applied Science; and Martin L. Mitchell, Acting Director of Agricultural Education, State Department of Education of New Hampshire. Pennsylvania State University, represented by Mr. William Brown, Instructor of Agricultural Education, was involved in the second session held at Albany, New York. In the final session, held in Durham, New Hampshire, the State of Connecticut expressed interest in the program, and in conjunction with this, Dr. Howard Martin, Chairman of the Department of Agricultural Education, University of Connecticut, made a major contribution.

Responsibility for the coordination, direction and the production of these guidelines and of the project rests with William H. Annis, Chairman of the Department of Agricultural Education, University of New Hampshire, Alan G. Robertson, Cheif, Bureau of Occupational Education Research and Frank Wolff, Associate in Agricultural Education representing the Bureau of Agricultural Education in the New York State Education Department. Recognition is extended for the direct support of Ralph C. S. Sutliff who served as Chief of the Bureau of Agricultural Education, New York State Education Department until his untimely death in May 1966 and to Joseph R. Strobel, former Assistant Commissioner for Occupational Education who provided encouragement and leadership in bringing this project to its completion.

Aside from the publication of these guidelines, this project has stimulated the development of other interstate projects between the New England States and New York in the field of Occupational Education Research.

This publication was produced with funds made available to the State of New York under Section 4(a) of the Federal Vocational Education Act of 1963.

I. PLANNING FOR ORGANIZING PROGRAMS

A. Establishing Goals and Objectives

1. Obtain information from local, county, regional, state, and interstate planning agencies regarding the educational needs and employment opportunities for periods ranging from 5 to 15 years from the present. Examine the data obtained in terms of population projections, housing trends, the general business outlook, and other factors which may influence decisions regarding the establishment of programs. Assuming that the need for programs exists, the examination of this data may also reveal whether the needs are greater for persons with skills in the production phases or in the services phases of the industry, or if there is apparent opportunity for both.

2. Other types of information which should be gathered and evaluated and sources to contact include:

Types of Information	Sources
a. the number and types of jobs currently available	a. the employment service
b. the number and types of jobs likely to be in demand in the future	b. ornamental horticulture producers associations (i.e. - flower growers, nurserymen, etc.)
c. the location of the jobs	c. groups of ornamental horticultural service business operators (i.e. - landscape contractors, arborists, retail garden center and florist operators, etc.)
d. the level of skill required for entry and advancement in the identified job opportunities	d. the state and county agricultural extension services
e. employers who would provide opportunities for student work experience programs	e. local and regional horticultural employers
f. employers interested in hiring graduating pupils	f. state agricultural education supervisors
	g. faculty members and administrators of post-high school institutions
	h. representatives or private trade schools and correspondence schools

3. The formation of a consultant (advisory) committee composed of representatives from the sources listed above should prove helpful in focusing upon the immediate and long-range goals and objectives of the program.

4. Programs may be designed to serve the needs of many different persons:

Secondary Level

a. those preparing for employment upon completion of high school

b. those preparing for admission to post high school training programs (including two-year colleges, four-year colleges, and other programs such as at private trade schools)

c. those pupils who because of a handicap are in need of special programs

Postsecondary Level

a. those who have completed a high school program but are available for additional full-time preemployment training

b. those who are employed but are in need of part-time training or retraining in order to hold their present jobs or to prepare for advancement

5. Programs for preemployment training should be broad enough in scope to provide the skills, competencies, and understandings needed for clusters or families of related occupations in the field.

6. Programs for those already employed may appropriately be more narrow in scope and content as is determined to be desirable.

7. The programs should complement rather than compete with existing or planned occupational education programs in the area, including those at post high school level institutions. They should also be consistent and coordinated with the state or regional master plan for providing comprehensive occupational education opportunities.

8. After careful consideration of pertinent items including the above-mentioned items, and in consultation with representatives of the sources of information listed, initial operating goals and objectives may be formulated.

9. Procedures should then be established which will provide for the periodic review and possible revision of both the immediate and long-range goals and objectives.

B. Determining the Number of Pupils to be Served and the Staff Needed

1. Use available student-interest data to estimate the likely enrollments of the various groups to be served (secondary, including those with special needs, and postsecondary, including both those requiring preemployment training and those in need of inservice training or retraining).

2. If significant data regarding likely pupil enrollment is not available, devise instruments and procedures for collecting it. Representatives of the occupational education and/or research divisions of the State Education Department, local educational research specialists, and employment service personnel should be able to provide valuable assistance in the design of instruments and in the determination of suitable data collection procedures.

3. After data is gathered it should be analyzed to determine probable initial enrollments and projected enrollments for the second and each succeeding year of operation.

4. Determination of the probable pupil enrollment and the organization and duration of the program, as well as an analysis of the predicted ancillary services to be provided by the instructional staff will make it possible to estimate the need for instructors for the first and succeeding years of operation. Guidelines for planning the needs for instructional staff may usually be obtained from the State Education Department.

C. Determining the Appropriate Organizational Pattern

1. As part of the offerings of a general high school:

   a. Where it is appropriate to do so in terms of need, likely pupil enrollments, and provision for equipment and facilities, programs in ornamental horticulture for in-school youth and out-of-school youth and adults may be organized as part of the curriculum offering of a high school.

   b. This practice is likely to be justified only in large school districts.

2. As part of the offerings of an area occupational education program:

   a. The trend toward the development of area occupational education programs to serve the need for specialized educational offerings for the residents of several school districts is having an impact on educational planning. These developments provide the opportunity to make sound, extensive programs for many different youths and adults economically feasible.

b. Ornamental horticulture programs organized on an area basis differ largely from those offered by single school district. This is usually in terms of the problems of coordination and cooperation involving the several districts being served.

3. Specialized vs. diversified agricultural education offerings

a. Most of the area occupational education programs as well as some of the single district programs will include course offerings in several areas of the field of agriculture. In such cases programs in ornamental horticulture should be organized as part of the agricultural education department. This will provide an opportunity to effect a coordinated program and enable team teaching and other innovative techniques to be used to strengthen the program.

b. In urban and some suburban areas, ornamental horticulture programs may be the only offerings in agricultural education available. In these cases, especially close coordination and cooperation will be required among the various occupational education instructors and among those representing the field of general education.

4. Planning courses and sequences

a. After a determination has been made of the needs to be met, the organizational pattern of the courses to be offered may be established.

b. Some of the factors which will affect the decisions include:

(1) the needs of the pupils to be served

(2) the amount of time available during the school day, or in after-work hours for employed out-of-school youths and adults

(3) the number of years available in which to offer occupational education to high school youths

(4) the organizational pattern of the school(s) involved

(5) restrictions imposed by transportation, instructional staff, facilities, and similar practical administrative matters

D. <u>Establishing Pupil Identification and Selection Practices</u>

1. Translate the program objectives previously determined into program and course descriptions and disseminate them through all appropriate media to pupils, parents, guidance counselors, teachers (both in the school where the program will be located and in feeder schools, if appropriate), and to potential employers and other interested groups and agencies.

2. The orientation of interested persons and groups should include descriptions of:

   a. the content of the ornamental horticulture program and how it differs from high school biology or botany and other courses

   b. the kind of jobs and educational opportunities to which the program will lead

   c. the student selection characteristics and admission requirements related to the levels of the proposed program

   d. There should be different admissions requirements for college preparatory, terminal students, and/or disadvantaged youth, respectively

3. Suggested techniques for orienting students, parents, and guidance counselors include:

   a. meeting with groups of students and parents before applications are received from feeder schools

   b. distributing samples of application forms

   c. designing and distributing descriptive brochures which will include required planned work experience programs

   d. arranging for school newspaper and commerical press review

   e. scheduling small group visitations

   f. arranging for a summer orientation program

   g. setting up a year-round calendar of events which includes guidance and public relations activities

   h. explaining how arrangements are made for conducting required planned work experience programs, both at the school laboratory and/or in commercial employment

4. Suggested criteria to be considered in selecting students:

   a. occupational interest: as evidenced by hobbies, membership in Scouts or 4-H, interests in the work of relatives employed in the field, if any

   b. physical: manipulative skills, general good mental and physical health and stamina

   c. work habits: ability to follow through, as demonstrated by previous work experiences; willingness to participate in the required planned work experience programs

d. parents: interests, influence, aspirations, and cooperation

e. reading and mathematics skills: differentiated by levels of proposed program

f. academic achievement: used primarily as an indication of pupil study habits and interests

g. recommendations: previous teachers and other acquaintences

h. interview: horticultural teacher's interview of the potential student

E. Planning the Work Experience Programs

1. Begin by identifying the criteria for the planned work experience in terms of its relationship to the program goals.

2. The consulting committee can provide valuable assistance in terms of how, when, and where experiences should take place.

3. Make provision for the wide range of student abilities and interests in arranging for jobs, in making time requirements, and in planning other aspects of this phase of the total instructional program.

4. Work as closely as possible with other agencies placing students in work-study, community action, and job corps programs when it is possible to tie in related activities.

5. Provide for as large a portion of the planned work experience programs as may be appropriate to take place at the school site. Include experiences both during the school year and in the summer.

6. Allow sufficient time for supervision during the school year and summer months. Make sure administrators understand what a vocational ornamental horticultural teacher's duties and responsibilities are in regard to the supervision of work experience programs. Provide opportunities for pupils to plan as well as carry out programs.

7. Visit and approve business and industries for work experience programs in advance. In selecting, consider employer personalities as well as on-the-job learning experience opportunities.

8. Plan for the use of a memorandum of agreement between students and employers.

9. Consult with representatives of the State Labor Department and local agencies to insure that the requirements established are not inconsistent with federal, state, and local labor laws and regulations, especially those regarding the employment of minors.

F. Planning for Needed Facilities

1. Translate the program goals and objectives into facilities needed. Include classrooms, mechanics laboratories, greenhouses, land laboratories, and other facilities necessary for the number of student stations anticipated.

2. Facilities should be planned to accommodate an optimum of 20 students per section, considering the length of the school day, the number of teachers, and other factors.

3. Make provision for future expansion in planning the initial facilities.

4. Consult with school administrators and suppliers and develop a statement of needs relative to:

   a. costs
   b. production time-tables
   c. priority in terms of facilities
   d. other needs

5. Recommended minimum space allocations for New York Schools which accommodate 20 students per section:

   a. classroom - 600 square feet
   b. mechanics laboratory - 1200 square feet
   c. greenhouse - 2600 square feet (including 600 square feet of headhouse)
   d. land laboratory - access to 5 acres

6. In planning the greenhouse it is desirable to make provisions for:

   a. adequate bench and/or bed space
   b. adequate walk space
   c. taking advantage of all potential growing area
   d. automatic heating, ventilating, and watering equipment
   e. various covering materials such as glass, plastic sheeting, solid plastic, plexiglass, etc., as may be appropriate

7. Other facility needs may include:

   a. a teachers office
   b. classroom sinks
   c. locker space
   d. lavatory facilities
   e. adequate water supplies
   f. sufficient storage space for large and small materials, equipment, combustibles, and fire prevention apparatus, and any other necessary items

8. Consideration should be given to the employment of a technical aide on either a full-time or a part-time basis. He would have, among his other duties, the responsibility for the care and maintenance of the facilities, especially during periods when school is not in session.

9. Local planners should consult with the State Education Department for assistance with facilities planning.

G. Planning for Needed Equipment and Materials

1. Equipment and materials lists should be developed which reflect the items needed to adequately conduct the planned program.

2. Assistance in developing these lists is usually available from the State Education Department, local educational personnel, individual commercial horticulturists and trade associations, the consulting committee, suppliers representatives, and other interested concerns.

3. In developing lists and planning budgets these suggestions may be helpful:

   a. order items in units in accordance with the most accurate projected needs

   b. differentiate supplies according to the program. Determine which instructional materials could better be developed locally, time permitting, as opposed to those produced commercially

   c. plan supply orders in terms of time (chronological) when used

   d. use consulting committee in making out supply lists and establishing priorities

   e. don't overlook potential local suppliers of instructional materials

   f. request the amount needed to run a quality program. Don't estimate budget on the basis of "what you can get away with"

4. For planning purposes the following estimates may be used for 2 - 3 sections of 20 pupils each:

a. initial classroom equipment and supplies	$ 2,000
b. initial mechanics laboratory and light field equipment and supplies	8,000
c. initial heavy equipment such as trucks, tractors, bulldozers, etc. which may be needed depending upon the content of the instruction program	10,000
d. annual replenishment of all supplies	2,000

H. Coordination with Other Subject Areas and Agencies

1. Inform teachers of other subjects as to your course content. Check their courses of study and lesson plans for interrelationships with ornamental horticulture. Compare with content and chronology (when taught in school year) of English, business arithmetic, distributive

education, science, industrial arts, fine arts, (drawing and design). Articulate these common or complimentary subject matter areas and inform other teachers and supervisory personnel.

2. Identify (in large schools) where related electives such as Biology or botany might be offered. Make sure that the ornamental horticulture teacher relates his instruction to these other subjects.

3. Confer with the administrator doing master scheduling. Let him know of the special instructional problems and which possible electives or "tracks" of required subjects, if any, might conflict with and detract from the horticulture program. Let "feeder schools" counselors know what electives should be included in students' programs.

4. Make sure "feeder schools" (if operating under a half-day program) holiday schedules conincide. Check transportation schedules before finalizing teaching schedule. Coordinate team sport practice days, club-days, etc., with after school horticulture program.

5. Coordinate your instructional content with that of institutions of higher education giving instruction in horticulture. Don't wait for college faculty to come to you. If possible, get a representative from higher education on the consulting committees.

6. Take an active role in civic beautification, service clubs, merchants associations, and garden clubs for public relations purposes, and as other possible sources of support for your program and future adult program.

7. Plan for an active youth leadership training program for the students of horticulture, such as the FFA.

8. Involve county agricultural agents, foresters, etc., consulting committee members, and horticultural business men as instructors in and out of class, as well as in the planning stages. Arrange for visiting lecturers - voluntary or remunerated.

I. Selecting the Teaching Staff

1. The shortage of qualified instructors could be the most severe factor inhibiting the inauguration of ornamental horticulture programs.

2. Within the guidelines or regulations established for the certification of teachers in each state, the following priority list of individuals to consider as potential instructors may be useful:

   a. graduates of four-year agricultural colleges who have had at least 12 hours of course work in ornamental horticulture and professional education courses leading to certification as a teacher of agricultural subjects

b. graduates of four-year agricultural colleges who had a major in ornamental horticulture

c. graduates of two-year agricultural colleges who had a major in ornamental horticulture and who have had at least three years of successful commerical experience in the field, preferably some of which was at the supervisory or managerial level

3. In multiple-teacher programs, steps should be taken to employ instructors whose talents and interests complement one another.

II. Evaluation of Instruction in On-Going Secondary Horticulture Programs

This section of the evaluation guidelines may be used to measure the effectiveness of on-going programs, including those which have been operating for a number of years as well as those more recently developed according to the criteria mentioned in Section I. In either event, comparison of the data derived from the section should be compared in light of the original objectives of the operating program. Where elements suggested here as points of evaluation do not coincide with the objectives of the local program, they should be disregarded.

The following are points to be considered in determining whether the program is of high quality and up-to-date.

A. Congruency of Program Operations with Stated Goals and Objectives of Local Programs.

1. To what extent and how often was planning data sought during the operating year from local, state, and regional agencies on educational and employment needs?

2. Has this data been measured against the projected numbers of student graduates during the same period?

3. How often has feedback been provided, and what techniques have been utilized in informing these data-furnishing agencies with information on the numbers and preparation of graduates and projected graduates from the program?

4. Has the program been examined to determine if significant changes in projected employment needs should warrant a re-examination of the content emphasis? (An illustration would be a switch in emphasis from greenhouse production to ornamental landscape service in the case of a local housing boom.)

5. Does an examination of admissions patterns of the program graduates identified as potential postsecondary students indicate that greater differentiation in horticulture content, unit variety (academic preparative), and time allotment should be made to provide an optimum program for both terminal and postsecondary students? Perhaps college prep students need a reduction in horticulture instruction time to permit necessary academic electives to be scheduled into their programs.

6. Have projections of students in the program been validated in terms of:

   a. enrollment

   b. holding power

   c. transfer from other courses

   What are the implications for change in your goals and objectives if the initial projections you made were inaccurate?

7. Is the content geared to the original goals of training for practical job entry presently consistent with student objectives?

8. Do program objectives need to be reevaluated in light of student achievement as opposed to teacher expectency? Does the program permit students to underachieve or is the teacher expectency level so high that students become discouraged due to complete lack of success?

9. How often and with what success were consulting committees and other resources used within the past operating year to actively review goals and objectives? Does composition of the consulting committee reflect personnel and operations people as well as executives and proprietors (particularly in large firms)?

10. Do goals and objectives have sufficient flexibility to permit achievement of short-term training needs without sacrificing the long range goal of educating for broad competencies and job mobility?

B. <u>Evaluation of Student Identification and Selection Practices in an On-Going Program.</u>

1. Are the number of student applicants from each feeder school represented in the quantities projected when the program was planned? If not:

   a. Is the information provided to counselors updated as to employment and educational opportunities provided by the program?

   b. Is counselor bias recognized, and are all media used to orient students, parents, and counselors?

2. Does the holding power of the program reflect the degree and accuracy of the pre-admission vocational counseling received?

3. Do selection practices in the feeder schools attempt to assess sincere student interest, or are certain groups "sold" on horticulture? Is the horticulture teacher involved in orienting, interviewing, and admitting prospective students before the beginning of the instructional program?

4. Are the obligations of the planned work experience program fully understood by counselors, parents, and students before application is made? To what extent are reasons for student dropout or transfer out of the program, repeated disciplinary infractions, and low achievement investigated and analyzed to provide a source of revision in guidance and student selection practices?

5. To what extent does the horticulture teacher initiate contacts with counselors and parents of students to appraise their achievement and progress in the program as a reflection of an appropriate vocational choice? Is the program sufficiently flexible to meet the individual needs and abilities of students being sent by feeder schools?

C. Evaluation of Instruction

1. Is the teacher making himself aware of continuously changing production and marketing techniques and including this in revising the content and time allotment in instruction?

2. Does the local course of study reflect current changes in production and service occupations in the area? When was it last considered for revision by a joint meeting with the teacher and advisory committee?

3. Is the course of study used as the basis for the teaching calendar and is it being followed?

4. Does the teaching calendar reflect the seasonality of local production and marketing practices? Is appropriate seasonal crop production changed as is necessary to illustrate different production and management techniques?

5. Is the teaching calendar realistic in length and depth in light of the total instructional time available?

6. Does the amount of time spent on theory and practice reflect the competencies required by employers at different job levels?

7. Are methods and materials appropriate and realistic in regard to the mode of instruction? Is there over-utilization of the lecture method? Are field visits utilized (where more appropriate than prepared samples) to illustrate materials? Is lesson preparation time spent in elaborate development of audiovisual materials when live materials are readily available? Are methods and materials appropriate to the field of horticulture being used?

8. Are appropriate clothing and equipment available? Are proper techniques used in orderly management of the facilities in order to provide for adequate health, safety, and sanitation?

9. Is instruction preplanned to provide opportunities for students to encounter and attempt to solve typical operating and managerial problems?

10. Are budget, supply, and material orders evaluated annually in terms of inventory, spoilage, and changes in program emphasis so as to provide sufficient quantities for enough practical application of theory to needed entry job skills?

11. Does evaluation measure the adequacy and appropriateness of student recordkeeping systems in detailing their planned learning activities in the work experience program?

D. Evaluation of Planned Work-Experience Program

1. Are teachers using sound methods for selecting businesses for approval as cooperating centers for student experience? (interviewing and canvassing as opposed to picking names out of the classified ads.) Is the teacher supervision regular and planned? Are cooperative arrangements mutually satisfactory to employers, parents, students, and teachers?

2. Do student school-work experiences reflect the necessity for the development of independent work values when not under close supervision as well as when a member of a crew; the reality of repetitive operations on the job; the simulation of production-oriented commercial employment; the avoiding of excess seasonal and school decorative assignments and activities?

3. Is there provision for formal assessment of the adequacy of staff and technical aides? Are these being utilized in helping to provide summer work-experience opportunities?

4. Are the instruments used to appraise student learning and progress geared to measure the learning which should take place in the planned work-experience program?

5. Is the individual planned work-experience program individually modified for each student through consultation with teacher, pupil, parent, and cooperating employer?

6. Are youth organizations of sufficient scope and direction to provide experiences in harmony with the objectives of the ornamental horticulture program?

E. Evaluation of Facitilites and Their Utilization

1. Are present goals and objectives as reflected in the operating program and enrollment coordinated to determine adequacy of space?

a. Common areas of evaluation would be: seating and board space; heating, ventilation, and plumbing; utilities and their accessibility; and lab, bench, table, and storage space.

b. Does the location, exposure, and layout of the greenhouse adequately meet program objectives?

c. Are cropping practices planned around any facilities limitations?

2. Are efforts made to keep the facilities abreast of changing technologies in the trade?

3. Are provisions made for maximum safety in the use of all facilities and equipment, especially in terms of increasing or decreasing enrollment?

4. Are day-to-day housekeeping practices, particularly in sanitation, adequate? Are daily clean-up chores regularly scheduled and assigned?

5. Are instructional materials, equipment, and supplies inventoried, classified, and stored for maximum teaching efficiency?

6. Is the year-around utilization of the facilities consistent with local practices in the trade?

7. Is the available equipment adequate in terms of existing state recommendations, trade practices, and suggestions by the advisory committee? Does the equipment inventory reflect the necessary mechanical skills which should be taught in ornamental horticulture programs?

8. Are locker, lavatory, and emergency facilities for students adequate in terms of present enrollments; is the growing trend toward enrollment of girls in horticulture programs reflected in facilities modification?

9. Do outlying horticulture buildings have signal devices, public address systems, etc. to maintain contact with main school buildings?

F. Professional Improvement and Relationships of Instructional Staff

1. Do the teachers join and support professional horticultural and community organizations?

2. Does the supply budget provide for publications which will contribute to professional growth?

3. Does the teacher evidence continuous professional growth as demonstrated by continuing education, publication contributions, and visitations to commercial establishments and other high school programs? Is professional improvement reflected in improved teaching practices?

4. Does evaluation measure effectiveness of the relationships with the advisory committee as determined by its influence on program change?

5. Does evaluation measure relationships with press, local radio, TV and other communication media, and local school administrators to inform and build public interest in and support for the programs?

III. Utilization of the Results of Program Evaluation

A. There are many factors operating which bear upon the degrees of success of the program other than those which are controlled by instruction. These factors include:

The degree of employment security in the area

Changes in job opportunity within and without the ornamental horticulture field

The educational opportunity offered by the availability of postsecondary programs

Changes in social climate in terms of employer attitudes toward different groups and current hiring practices

Changing technology within and without the ornamental horticulture field

Changes in real income levels

Changing land use patterns

Population mobility

At this stage in the evaluation we are concerned: (a) with the comparison of achievements in relation to previously stated objectives and goals, and (b) an appraisal of emerging goals through which the program may be adjusted and extended.

B. Evaluating Outcomes

1. Major Questions:

a. To what extent were graduates of the program employed in the identified fields?

b. To what extent did the program serve the entire range of student interest, abilities, readiness levels? Did it only serve a more limited one?

c. To what degree of competency did the pupils master the subject matter taught? How closely did these competencies relate to the competencies needed by employers?

d. To what extent did the pupils continue their formal education?*

e. To what extent can the school district afford to maintain follow-up activities on dropouts and graduates?

---

*At the end of the year the guidance officer and the teacher should make a list of those students going on to post high school training. The guidance office can flag the record cards of former graduates who request transcripts for college admission.

f. To what extent would each of the following influence the degree of success of the program?

(1) student identification and selection

(2) facilities

(3) materials and supplies

(4) the Work Experience Program

(5) the use of community resources

g. To what extent was the actual instructional program congruent with the expressed objectives?

h. To what extent are you satisfied with the practical and theoretical balance of instructional content?

i. To what extent is feedback from employers participating in the planned work experience program gathered, evaluated and utilized to modify and make more meaningful the classroom and laboratory instruction?

2. Getting Answers

a. Prepare a statement of what is happening to general and ornamental horticulture employment and employment trends and opportunities in your region. Agencies such as the following are suggested sources of data:

(1) Town Planning Board

(2) Chambers of Commerce

(3) Superintendent of Schools

(4) Employment Security

(5) County Agents

(6) Extension Board

(7) Zoning Boards

(8) Advisory Committee

(9) Census Data (if recent)

b. See factors listed which gear on program's characteristics as affecting outward appearance of program success. Pay attention to those changes which may have significance in relation to ornamental horticulture.

c. Suggest that this statement be prepared by an advisory board; it might be possible to use sections of county agent's annual report.

3. Suggested Techniques for gathering data:

a. determine the kind of data needed

b. set up a systematic approach for collecting and recording data throughout the year

c. get relevant data in the cheapest and easiest way. For example, through growers or trade group associations

d. data should be gathered on all former students, whether graduates or dropouts

e. utilize all available data, such as that available in the guidance office as well as from other sources. Avoid duplicating data-gathering efforts conducted by other agencies and departments of the school

f. a notation should be made of the source of all data gathered

g. design appropriate data-gathering forms

h. make other school personnel and data collecting departments aware of your data-gathering efforts so that they may assist in the effort

i. consider making the data-gathering process a co-operative effort with other ornamental horticulture departments and community colleges

j. use instructional and placement activities to provide feedback data also. Work with the alumni association. Take time while on employer interviews and field trips to jot down data which concerns course content as well as students

k. contact supply and equipment houses and salesmen at least once a year to learn about new "hardware and software" which may affect your content emphasis and methods

l. use advisory committees to suggest topics for, and to analyze final and two- or three-year comprehensive school examinations

m. call advisory committee together for an annual meeting to review course content, program emphasis, and instructional methods. Get suggestions for setting up situations for performance testing of students

n. twice a year ask current students to fill in a written list on what grads "are doing." Carry such a list around in field notebook, make notes on names of graduates you come across

o. prepare biennial summary report - follow up employers originally contacted and new ones which have since developed while program was in planning stages. Have them provide the follow-up and evaluative judgements--much of this data may be obtained through phone contacts.

C. Evaluating and Classifying Data

1. Classify data according to types of students, (graduates, dropouts) and whether they are day or evening school students.

2. Classify employment data according to job titles, occupational family clusters, or other conventional methods.

3. Record only relevant data, avoid the collection and recording of extraneous data.

4. Avoid the tendency to collect and record data which only gives a favorable image or supports the present programs. Unfavorable data can also be useful.

5. Summarize pertinent data for inclusion in annual reports for the local board of education, state agencies, etc.

D. Appraisal of Emerging Goals

1. Elements in Using Data

a. Project and analyze the net cost of the program changes your data will effect in relation to program benefit returns. Do this before initiating forces to implement these changes, and plan alternatives ahead of time. Consider those alternatives which may not at first seem feasible.

b. Analyze characteristics of all entry and recent full-, part-time, and seasonal workers in ornamental horticulture and related businesses in your employment region. Determine long- and short-term training needs as recognized by their employers against your program operating service ranges and objectives.

E. Establishing Goals and Objectives of Programs

1. Determine alternate methods of on-the-job or supplementary upgrading or entry short-term training for workers past high school age and if whether this might best be provided through the following:

a. adult education

b. school initiation

c. employment service of a manpower training project

d. co-operative program of growers or employers associations

e. Office of Economic Opportunity

f. extension service programs or two-year colleges

g. private trade schools

h. correspondence courses

2. Using data recorded regarding student characteristics, compare the characteristics of students employed in ornamental horticulture with the students who:

   a. went on to college

   b. were not employed in ornamental horticulture

   This should lead to identification of predictive characteristics regarding those who obtained employment in ornamental horticulture.

3. Attempt to determine whether your students who did not obtain employment (or go on to higher education) in ornamental horticulture were not employed because of poor preparation, poor work habits and attitudes, personality factors, or selective hiring practices in relation to certain groups.

F. Elements in Decision Making

Decision making often involves more than one person. It is well to talk with all persons who may be involved regarding the way they see the situation and the ways in which they see themselves as being involved in making decisions. For example: A teacher of agriculture usually feels that he alone should make the decision as to the conduct of the classes, whereas, other people most certainly would be involved if it were a question of adding new facilities or new courses.

1. Other areas which involve the establishment and extension of the program include:

   a. development of adult education courses

   b. co-operative programs with industry

   c. the use of a contract form of occupational experience

d. the addition of basic education courses as a foundation for an adult education program

e. changing the time allotment for give classes

f. establishing new educational standards

g. adding staff members

h. using assistance cf business education programs and student tabulating data

i. developing a co-operative program with distributive education

j. coordinating school schedules

k. developing budgets

l. providing placement service

View this as a changing process in which the following stages may usually be found: AWARENESS, INTEREST, EVALUATION, TRIAL, AND ADOPTION.

Suggestion for Implementation

Use these guidelines for ornamental horticulture program development and evaluation, not only to add needed elements to update on-going programs, but in making the difficult decision to discontinue program practices and procedures which have relatively low returns and high costs. In adding new elements to an on-going program, give priority to those which will, if adopted, enable the program to reach those students and adults not presently served.

All Guidance Personnel
of St. Louis County

The Board of Education and administration of the Special School District of St. Louis County are happy to make available to the boys and girls of the County opportunities to prepare for the world of work by enrolling in the new and larger programs of vocational and technical education that will be started in September, 1967 and further expanded in September, 1968.

The degree to which the boys and girls and the employers of the area profit from this new educational program will depend, in a very large measure, on the effectiveness of the guidance programs in each of the schools. This Handbook is intended to provide the essential information needed by each counselor.

We earnestly hope that this publication will serve as a valuable tool for counseling the non-college bound students of St. Louis County.

Sincerely yours,

Oral W. Spurgeon

INTRODUCTION

This handbook is intended to provide the information necessary for counseling students in the selection of Vocational-Technical Programs. It contains statements on the purpose of the programs and their objectives. It also includes the admission requirements, the selection criteria, the recommended course prerequisites, and the course descriptions for the various programs offered.

It is hoped that all counselors will become familiar with its contents and use it as a guide in planning with their counselees for admission to the specific Vocational-Technical Programs.

As stated in the Informational Bulletin, the program of Vocational-Technical Education in St. Louis County was created to fulfill an expressed public demand. The primary purpose of this program is to prepare non-college bound students for entry as advanced learners in jobs related to their training and to provide them with the incentive to improve their job competency.

To accomplish this purpose, the Vocational-Technical Programs provide boys and girls with opportunities to develop the technical knowledge, the basic skills, the attitudes, and the work habits required for the efficient worker.

THE OBJECTIVES OF VOCATIONAL-TECHNICAL PROGRAMS

The objectives of the Vocational-Technical Programs for the boys and girls of St. Louis County are:

A. To develop in each student skill to secure initial employment through:

1. Experiences dealing with the performance of skills in an occupational area for which the student has expressed an interest and is physically and mentally qualified to attain a reasonable degree of proficiency.

2. Experiences which provide the basis for understanding and use of functional technology related to the occupational area selected.

3. Experiences which tend to help students develop competency in dealing with personal and group relationships within the school and on the job.

4. Experiences in the shop, related, and other classes whereby the student has the opportunity to develop desirable work habits, ideals, and attitudes essential to job success.

5. Experiences which will enable the student to make decisions and to solve specific technical problems.

B. To develop in each student the technical knowledge, basic operational skills, and the appreciations essential to orientation to job and life situations by:

1. Describing the requirements and opportunities common to a family of allied trades or occupations.

2. Discussing working conditions, industrial organization, jobs, relationships, labor and social legislation.

3. Emphasizing the skills and facts which enable the student to interpret his natural environment and by providing information which helps him adjust himself to the group activities required to accomplish his job successfully.

4. Emphasizing the dignity and value of work as a fulfillment of a basic life need.

C. To help each student to understand his responsibility as a citizen by:

1. Helping him to understand the economic, social, and political forces that effect the stability of employment.

2. Helping him to develop the necessary ability to adapt to occupational changes brought about by changing technological developments and economic conditions.

3. Discussing civic problems related to workers as citizens.

4. Stressing the acceptance of duties relating to choosing leaders, supporting good leaders, exercising the right to vote, and holding public or organization office.

5. Studying adequately the agencies affecting the individual worker's welfare.

D. To aid each student in the development of good health habits and attitudes through:

1. A program of health instruction emphasizing industrial hygiene.

2. Emphasis on developing safety consciousness by teaching safe practices in all phases of the instructional program.

E. To develop in each student an understanding of the need for conservation of time, materials and equipment through:

1. Experiences emphasizing the value of time in the performance of work.

2. The development of an appreciation for cost of employment and materials.

ADMISSION REQUIREMENTS

Applicants for the Vocational-Technical Schools must have the following units of credit to be considered for admission:

English	- 2 units
Social Studies	- 2 units
Mathematics	- 1 unit
Science	- 1 unit
Fine Arts	- 1 unit
Health and Physical Education	- ½ unit

It is recommended that credit in algebra and geometry be included in the preparation of those applicants wishing to enter the more technical fields. These include, Electronics, Engineering Drawing and Tool Design. Priority for the selection for these programs will be given to students with these recommended course prerequisites. Similarly credits in other courses will be considered in selecting students for other vocational programs. For Intensive Business Office Education credit in typing is required.

The selection of students for Vocational-Technical programs will be based on specific prerequisites and applicants will be given priority based on criteria intended to determine those most likely to profit from the instruction and to succeed in the occupational area for which they have been prepared. In addition, each applicant must be in good standing in his home school.

The chart on the following page states the recommended prerequisites for admission to Vocational-Technical Programs at the South County Vocational-Technical School during 1967-1968.

A CHART INDICATING RECOMMENDED CREDIT REQUIREMENTS
FOR EACH OF THE VOCATIONAL-TECHNICAL PROGRAMS IS LISTED BELOW:

	STRONGLY RECOMMENDED	RECOMMENDED	RECOMMENDED UNITS OF MATH
A/C and Refrigeration		Algebra Physical Science Mechanical Drawing	1
Appliance Service		Algebra Physical Science Mechanical Drawing	1
Auto Mechanics	Above Average Reading Achievement	General Shop	1
Body & Fender Service		General Shop General Metals	1
Intensive Business & Office Education (Cr. in typing required)	Basic Business Good Language Achievement		1
Commercial Art		Art Course	1
Electronic Data Processing	Basic Business Typing	Algebra	1
Electronics	Algebra Geometry Physical Science	Mechanical Drawing	2
Engineering Drawing	Algebra Geometry Mechanical Drawing		2
Fitter Welder	General Shop Basic Math-2 Units Mechanical Drawing	-	2
Key Punch	Basic Business Typing		1
Machine Shop		Basic Math Algebra Mechanical Drawing	2
Offset Lithography	Good Reading & Language Achievement		1
Radio & TV Service		Algebra Physical Science	2
Sheet Metal	General Metals	General Shop Basic Math Mechanical Drawing	1
Tool Design	Algebra & Geometry Physical Science Mechanical Drawing		2

ADMISSION PROCEDURES

Admission to one of the Vocational-Technical Programs offered at the South County Vocational-Technical School for next year, 1967-68 will be based on completion of the following procedures:

1. The interested student must complete the pre-enrollment form (see Page 8) under the supervision of his or her counselor, indicating course preferred.

2. The counselor must complete the check list of student's personal traits on the back of the pre-enrollment form.

3. The completed pre-enrollment form together with a copy of the STUDENT'S TRANSCRIPT, reflecting his latest grades, complete test data and his attendance record should be submitted by February 15, but must be submitted by March 1, 1967, to:

   Director of Pupil Personnel
   Vocational-Technical Education
   Special School District of St. Louis County
   9820 Manchester Road
   Rock Hill, Missouri 63119

Special aptitude testing for Electronic Data Processing and Commercial Art will be scheduled during the period from March 10, to March 25, 1967. Students applying for these courses will be notified of the scheduled test dates and the places where tests will be administered.

A final list of students selected for each course will be mailed to each school principal and each guidance director by April 15, 1967. Your cooperation in providing the pre-enrollment forms and transcripts by February 15 is essential for the selections to be completed by this target date.

From all indications, the number of students applying for vocational courses next year will exceed the capacity of each program. As previously indicated, only those students with the twenty highest "selection scores" will be admitted to each class.

Also, a student selected for the Commercial Art or Offset Printing course must plan to complete the second year of the two-year program at the South County School since these courses will be offered only at this facility. In the other courses where two or more class sessions will be established during 1967-68 the student will be expected to attend his second year 1968-69 at the school nearest his home.

Arrangements are being made with administrators and guidance directors of home schools for providing specific information relating to course offerings and admission requirements. Counselors will be informed when dates for meetings with students will be held and are expected to arrange for the assembly of interested tenth graders at the scheduled time.

Students presently enrolled as juniors in the County Technical Schools will have the opportunity to transfer as full-time students at the South County Technical School next year.

Transportation will be provided and graduation diploma will be conferred by the Board of Education of the Special School District.

Counselors must complete check list of Student's Personal Traits included on the back of this form.

(over)

Please evaluate each of personal traits listed below by checking the appropriate block.

INDUSTRY, ENERGY. Energy is application to school duties day by day.	Usually indifferent	Sometimes lazy.	Average in industriousness.	Hard worker; willing to do more than assigned.	Exceptionally diligent, eager to do more than assigned.
RELATIONS WITH OTHERS. Helpfulness and cooperativeness with associates and superiors in manner and act.	Surly, troublesome indifferent.	Sometimes difficult to work with.	Usually tactful and obliging; self-control	Always congenial and cooperative.	Highly cooperative; inspires cooperation.
EMOTIONAL STABILITY. Ability to control emotions.	Loses his head easily.	Apathetic; unresponsive.	Usually well controlled	Balance of responsiveness and control.	Notable and unusual control of emotions.
LEADERSHIP. Ability to get others to cooperate.	Unable to lead.	Not usually a leader.	Sometimes displays leadership.	Leads well under most circumstances.	Displays marked ability to make things go.
APPEARANCE. Such factors as cleanliness of clothing and person including care of hair, teeth, nails, etc.	Untidy carelessly dressed.	Clean, but careless of appearance and grooming.	Average in grooming and dress.	Neat dress well groomed.	Outstanding in taste and care.
ABILITY TO LEARN. Ease in learning new methods, adapting to new situations, tasks.	Unable to learn.	Learns slowly.	Average rate of adaptation.	Above average in capacity.	Outstanding in mental ability and alertness.
DEPENDABILITY. Faithfully carries out assignments. Bears full share of responsibility.	Needs constant watching.	Sometimes unreliable.	Responsible but needs some directions.	Very dependable; needs no discipline.	Thoroughly dependable, trustworthy.
PUNCTUALITY.	Always tardy.	Seldom on time.	On time but needs some prodding.	On time most of the time.	Always on time.

INTEREST - Attention or Curiosity is particularly engaged by course selected	Counselor's Suggestion	Casual Interest	Average Concern	Above Average Curiosity	Exceptionally eager to undertake course

COUNSELOR'S COMMENT: Please include any information which might indicate student's ability or lack of ability to succeed in the course. Include the reason for student's course selection.

SELECTION OF STUDENTS

Since the student capacity of the initial programs will be less than the number of applicants meeting the units of credit requirements, selection of those to be admitted will be based on their comparative standing on multifactor criteria.

A "success prediction score" will be determined for each applicant by assigning points, plus or minus from the median (50% ile) for each of the following selection criteria:

1. Attendance

2. Reading Achievement - Percentiles on standardized achievement tests

3. Mathematics - Percentiles on standardized achievement tests

4. Scholarship - Grade point average if available or general estimate of overall scholarship

5. G.A.T.B. 1
6. G.A.T.B. 2
7. G.A.T.B. 3
8. G.A.T.B. 4

   Vocational aptitude patterns expressed in Stanine Equivalents on the General Aptitude Test Battery or other multi-aptitude test batteries--Will differ in the various programs offered.

9. Interest - Indicated or expressed by student to his counselor

10. Pre-vocational Grade: Industrial Arts, Fine Arts, or Typing I depending on course desired

11. Science Grade

The sum of the plus or minus deviations from the national, state, or local means for each factor shall be the <u>total selection score</u>. Students with the 20 highest scores will be admitted to each class with the exception of Electronic Data Processing where 21 will be admitted.

Table I shows the selection chart to be used in determining the <u>selection score</u>.

For example, a student with no absence during his previous year of attendance would be assigned a plus 50 score for the attendance criterion. If he scored at the 30th percentile in reading on most recently administered standardized achievement test, he would be assigned a minus 20 for this criterion. If his mathematics achievement was at the 70th percentile on the most recent test, he would be assigned a plus 20 for the math criterion. If his scholarship level

was average, he would receive a score of 0 since he would be considered at the median or 50th percentile for this factor.

The assignment of scores for each of the G.A.T.B. factors is based on occupational aptitude patterns on the General Aptitude Test Battery which has been determined to be the most widely used test battery in use today. On the basis of these tests, minimum aptitude scores have been determined for predicting success in each occupational area related to the Vocational-Technical Programs being offered next year at the South County Vocational School. These scores have been expressed in projected stanine equivalents derived from conversion of tenth grade aptitude scores for each of the nine measured aptitudes on the G.A.T.B. A chart identifying these aptitude patterns for each Vocational-Technical Program is shown by Table II on page 13. Also, included are interpretative categories for indicating level of attainment from lowest to highest for each Stanine Equivalent shown by Table III on page 14.

It may be noted that where the G.A.T.B. scores are not available, the specific aptitudes measured by other multi-aptitude test batteries such as the D.A.T. will be used to determine the selection criterion for each of the four aptitudes which comprise the occupational aptitude pattern for a Vocational-Technical Program.

As additional criteria for compiling the "selection" score; indicated interest in a Vocational-Technical Program noted or expressed by the student to the counselor will be measured by the same deviation technique. Also, depending on the program selected, the previous grade in Industrial Arts, Fine Arts or Typing I and Science will be considered in determining the score for these criteria.

The total selection score for each Vocational-Technical Program applicant will be compiled by the addition of the plus or minus scores for the selection criteria listed. Students selected for each program will without exception be those with the highest scores.

In those instances where there is no available data for use as a selection criterion, a score of zero will be arbitrarily assigned, and the total score will be based on the scores on the remaining criteria. Thus a student will not be penalized or benefited by any lack of data.

Provision will also be made for the administration of specialized aptitude and performance tests in electronic data processing and commercial art to determine the student's qualifications for such programs. These tests will be administered between March 10, and March 25, 1967.

* A stanine is the unit that divides the norm population into nine groups. Except for Stanines 1 and 9, the groups are spaced in half-sigma units, with the mean at Stanine 5.

Aptitude scores on the G.A.T.B. for ninth and tenth grade students have been converted to Stanine Equivalents. This stanine equivalent has the desirable characteristics of providing a broader description of performance on the test.

AIR-CONDITIONING AND REFRIGERATION SERVICE

AIR-CONDITIONING AND REFRIGERATION MECHANIC 637.281 AND .381

The air-conditioning and refrigeration mechanic installs, services and repairs air-conditioning units and refrigeration equipment. The mechanic may install air-conditioning equipment ranging from small, self-contained units to large central-plant type systems. On large installation jobs, he must read and interpret blueprints or drawings. On small installations, he may have to prepare his own working diagrams and do simple layout work, such as measuring and cutting pipe.

In installing new air-conditioning and refrigeration equipment, the mechanic puts the motors, compressors, condensors, evaporators, and other components in proper position, following design specifications. He connects duct work, refrigerant lines, and other piping and then connects equipment to an electrical power source. After completing the installation he charges the system with refrigerant and checks the unit for proper operating performance. He adjusts the electrical controls, liquid metering devices, safety devices, and other components to obtain the most efficient performance.

In maintenance of the equipment, the mechanic regularly cleans and lubricates machinery, replenishes liquid refrigerant, adjusts valves, and examines other parts of the equipment. He uses specialized tools and common hand tools including electric drills, acetylene torches, pipe benders, hammers, screwdrivers and pliers. He also uses testing devices such as psychrometers, refrigerant gages, ohmeters, voltmeters, and thermometers.

A large portion of air-conditioning and refrigeration mechanics work for dealers and contractors that specialize in installing and repairing air conditioning and refrigeration equipment. Many are employed by construction companies; others work in department stores, hotels, restaurants and food store chains, factories, warehouses, and other establishments large enough to require full type maintenance men. Some operate their own repair shops.

The program in the vocational school is designed to prepare students for entry into this trade upon graduation. With additional on-the-job training and work experience, students who have completed these courses can qualify as skilled mechanics.

Mechanical aptitude, interest in electricity and ability to read blueprints are important for workers in this occupation. Good physical condition is also important because the lifting of heavy equipment is often required. Courses in algebra, physical science, and mechanical drawing are recommended.

The number of air-conditioning and refrigeration mechanics is expected to increase rapidly through the mid-1970's. In addition to employment growth, more than a thousand openings will arise annually from the need to replace experienced workers who are promoted, transfer to other fields of work, retire or die.

APPLIANCE SERVICE

APPLIANCE SERVICEMEN 723.381

Appliance servicemen repair portable household electrical appliances, such as fans, heaters, vacuum cleaners, toasters, and flatirons. They also repair electric and gas appliances that do not operate properly. Appliance servicemen usually specialize in the repair of either electrical or gas appliances, and of a particular type of appliance, such as washing machines, refrigerators, and small appliances. Basically, their work involves determining why appliances do not operate properly and then installing new parts, repairing parts, or making adjustments.

To check electric and gas systems, appliance servicemen use special tools and testing devices including watt-meters, ohmeters, voltmeters, and manometers; combustion test equipment and vacuum pressure gages. In replacing old parts and installing new parts, servicemen use common hand-tools, including screwdrivers, pliers, special wrenches and other hand-tools designed for use on particular appliances. Most work is done in the home except for major repairs which are done in a repair shop or in some case at the manufacturing plant.

More than half of these servicemen were or are employed by independent repair shops and firms that specialize in servicing coin-operated washing and dry cleaning machines. About a fourth are employed by retail establishments, including department and appliance stores. The remainder are employed by appliance manufacturers and wholesale distributors who operate service centers, and by gas and electric utility companies.

The vocational program prepares young men to install, maintain, repair, and service all types of electrical and gas home appliances. This involves developing skills in diagnosing malfunctions and making corrections by installing new parts, repairing parts, and making adjustments.

Applicants for training as appliance servicemen are those with mechanical aptitude, average manual dexterity, average spatial aptitude, and average numerical ability. Courses in algebra, physical science, and mechanical drawing are recommended.

Appliance servicemen must understand, in a practical way, how to use equipment that measures electricity, and how to use such measurements to determine whether electrical currents in appliances are flowing properly. Also, important in servicing electrical appliances, is a knowledge of wiring diagrams, which show electrical connections and current flow between appliance parts. A knowledge of electronics is necessary to perform some appliance repair jobs.

Employment of appliance servicemen is expected to increase by more than 50,000 during the 1965-1975 decade. In addition to the opportunities resulting from employment growth, more than 40,000 job openings will result in the need to replace experienced servicemen who retire or die. Transfers may provide other job openings.

AUTOMOBILE MECHANICS

AUTOMOBILE MECHANIC 620.281

An automobile mechanic repairs and makes adjustments on passenger automobiles and trucks using various kinds of specialized automotive hand tools and equipment, and more complex equipment such as wheel alignment devices and engine analyzers. A mechanic tests and inspects automobile parts to discover defects or malfunctions in operation before actual repair work is undertaken.

Typical repair work includes engine tune-ups, bearing adjustments, brake relining, valve grinding and replacement of piston rings. They sometimes prepare estimates of costs of repairs - labor and material - for customers before actual repair work is commenced.

Large numbers of mechanics are found in service departments of new and used car dealers. Very significant numbers are employed by or are the owners of independent garages where all kinds of repairs or a special type of repair such as radiator repair or engine overhaul is performed. Other places of employment include service stations and organizations maintaining fleets of motor vehicles, government units, bakers, dairy, and taxicab companies, truck lines and automobile rental agencies.

The program in the vocational school is designed to train men to service and repair automobiles. The training involves developing skills in inspecting and diagnosing defects or malfunctions, and the disassembly, repair and overhaul of automobile components.

Interest in automobiles, mechanical aptitude, dexterity with tools, and visualization ability are important to automobile mechanics. Courses in speech and English are definite advantages for advancement opportunities to service salesmen or service manager where customer relations are involved. Since the mechanic works constantly from Auto Service Manuals, good reading achievement is strongly recommended.

The opportunities for employment of automobile mechanics are expected to increase significantly in the years immediately ahead due to population growth and increase in numbers of automobiles sold. An estimated 10,000 job openings are expected annually in the period from 1965-1975.

BODY AND FENDER REPAIR

AUTOMOBILE - BODY REPAIRMAN - 807.381

The automobile body repairman repairs damaged bodies and body parts of autos and trucks. He examines damaged vehicles and estimates cost of repairs. The automotive body repairman must be able to take care of most any kind of damage that can occur to metal, trim, glass or upholstery, and return the car to its original condition.

The repairman must know how to use hydraulic power tools to get the body of a damaged car back into line so that doors, windows, and other parts fit and operate properly. He must know how to remove upholstery and trim to get at both sides of the damaged metal, and among other duties, he must be able to repair door latches and locks, windows, and window regulators as well as other fittings and hardware. The auto body repairman must know how to bump out body panels, doors, fenders, and deck-lids, and have the ability to restore bent, dented and warped surfaces. He must weld and solder torn and cut sheet metal, thus readying the job for the next process of painting and refinishing. High quality painting and finishing is the final mark of the body craftsman.

Most automobile body repairmen work in repair shops that specialize in repairs and painting or in the service departments of automobile and truck dealers. They start as helpers, but with additional experience can qualify as body repairman. Other employers include organizations that maintain their own fleets of motor vehicles, such as trucking companies and buslines and federal, state and local governments.

The vocational program provides training in the repair of damaged auto bodies and restoring them to their original condition. Training in the use of special alignment machines is also included. Interest, mechanical aptitude, average dexterity with tools and good physical stamina are requirements of good workers in this occupation. A boy with a "trick knee" cannot succeed in this occupation. Courses in basic shop and general metals are recommended.

Employment is expected to increase moderately during the 1965-1975 decade. However, the increased number of motor vehicles damaged in traffic accidents, are expected to provide about 1500 job openings annually.

BUSINESS AND OFFICE EDUCATION

This course is an intensive one-year program, seven periods a day for above average 12th grade students who have changed their plans for going to college. It is designed to prepare the students for jobs as secretaries, bookkeepers, office machine operators, billing machine operators, mail-preparing and mail handling machine operators, operators of tabulating machines and relating equipment, computing machine operators, bank tellers, and cashiers. Some attention is given to key punch and data processing operations, but a particular emphasis is given to office communications and office procedures.

As may be noted, people whose main job is to operate some of the more common types of office machines have job titles taken from the kinds of equipment they use. They may also do the regular clerical duties required of office workers.

Workers in this category are employed by business, professional, industrial offices, schools, government agencies and offices of all kinds. Women out number men in office, clerical and related jobs, but boys trained in this program will have excellent job opportunities particularly if they develop good shorthand and transcription skills.

Dependability, accuracy, well groomed appearance, average ability to use numbers, and good English skills are attributes of good workers. Courses in General Business and General Math are recommended. Credit in typing is required for admission.

With the increased demand by both public and private organizations for skilled office personnel, the need for workers with this type of training is expected to increase employment opportunities rapidly in the decade 1965-1975. It is estimated that more than 300,000 new positions in clerical and related operations will be added each year during this period.

COMMERCIAL ART

COMMERCIAL ARTISTS 141.081 ILLUSTRATOR

The commercial artist, illustrator, graphic artist, draws and paints illustrations for advertisements, books, magazines, posters, billboards and catalogs. Much of the advertising artist's work is in creating the concept and artwork for a wide variety of promotional items or "collateral material" including direct mail advertising booklets, folders, brochures, catalogs, and counter displays used to supplement newspaper and magazine advertisements and television commercials. They may also prepare slides, film strips and other visual aids. Some commercial artists specialize in fashion illustrations, greeting cards, book illustrations, or technical drawings for industry.

Most commercial artists are employed as staff artists on a regular salaried basis by advertising agencies, commercial art studios, advertising departments of large companies, printing and publishing firms, textile companies, television and motion picture studios, department stores, sign shops, mail-order houses, greeting-card companies, and a variety of business organizations. Many work as free-lance artists, selling their artwork to any available customers - chiefly to the same kind of organizations that employ salaried artists. Some salaried commercial artists also do free-lance work in their spare time. A number of commercial artists work for Federal Government agencies, principally in the Defense Department. A few teach in private art schools on a regular or part-time basis.

Ability to make visual discriminations, spatial aptitude and average coordination of eyes and hands are necessary attributes of the good worker. Courses in art are strongly recommended as prerequisites.

The course provides students with the fundamental knowledge and basic skills to conceive and create artwork for a wide variety of promotional items used in the advertising industry. Specialized techniques of commercial art are included in the course. Knowledge of photographic, silkscreen off-set and letter press graphic reproduction techniques will be gained. Additional development of the individual's artistic talent and creative ability then become the basis for advancement.

The upward trend in business expenditures for all kinds of visual advertising will be reflected in a growing demand for commercial artists. Television graphics, packaging design, poster and window display and greeting cards are expected to be sources of expanding employment opportunities.

ELECTRONIC DATA PROCESSING

AUTOMATIC DATA-PROCESSING-EQUIPMENT OPERATORS 213.138 .588

Personnel engaged in occupations concerned with electronic and electromechanical machines that record, store, process, and transcribe data from punchcards, paper tape, magnetic tape or other sources are included in this group. They solve mathematical, engineering or technical problems, keep records, or supply information. Operators may also operate machines that transcribe data to or from punchcards or tape for use in automatic data processing equipment.

Electronic data processing operators are chiefly employed in metropolitan centers where large business organizations and government agencies are located. A great many work for insurance companies, public utilities, wholesale and retail establishments, and manufacturing firms. A smaller number are government employees doing work related either to scientific or technical problems or to the processing of the vast amount of paper work which must be handled by many government offices. Many operators are also employed in service centers which process data for other firms on a fee basis.

Job descriptions for operators cover a wide range depending upon the machine used and the task performed.

The purpose of this course is to prepare students for entry into a wide range of jobs requiring training in operating electronic computers and related equipment. Training includes transcribing data to or from punchcards or tape for use in automatic-data processing equipment. With additional experience and training, operating personnel may be assigned to operate more complex pieces of equipment and advance to become digital-computer programmers.

Computer operators must have verbal aptitude, spatial ability to follow diagrams, above average clerical perception, and numerical ability. The ability to think logically is essential to progress in this type of work. Courses in basic business and typing are strongly recommended. Algebra is a recommended prerequisite. Applicants will be required to pass the Machine Operator's Test.

The use of electronic-data processing equipment is expected to continue to increase very rapidly in the 1965-1975 decade. With increased technology thousands of trained people will be needed to fill new jobs, both in firms with their own computer installations and in service centers which rent computer time to businesses.

ELECTRONICS

ELECTRONIC TECHNICIANS 726.281

Electronic Technicians perform a variety of duties including the application of principles and theories of electronics. In general, their job duties involve constructing, testing, repairing, adjusting, and installing electronic devices such as computers, radar equipment, radio and television equipment and servo-mechanisms. An Electronics Technician is frequently known by other titles such as Electronics Mechanic or Electronics Specialist.

Job duties depend upon the type of establishment or industry in which the technician is employed. For example, in an aircraft manufacturing plant, workers must build and install many kinds of electronic equipment in aircraft. When engaged in testing or repair operations, the technician must understand, use, and interpret results obtained from such instruments as oscilloscopes, signal and other type generators, tube testers, ohmeters, ammeters, voltmeters, Q-meters, and multimeters.

The largest group of electronic specialists are found in radio and television manufacturing and repair shops. Numbers of these workers are also employed by radio and television broadcasting stations. Significant numbers are in aircraft manufacturing and with the development of guided missiles, electro-mechanical control systems, computers and other electronic equipment has stepped up the demand for electronics technicians.

The course provides the basic training for entry into the wide range of jobs available in the field of electronics. The training involves the application of theoretical knowledge and manual skills to various tests involving working on electrical circuits, wiring and installing complicated units and the preparation or interpretation of diagrams and layouts and trouble shooting. The determination of malfunctions in equipment and making repairs is part of the training. This involves skill in the use of diagnostic instruments such as oscilloscopes and signal generators.

Mechanical aptitude, the ability to think visually and recognize relations of geometric forms, finger dexterity are necessary for the good worker. A course in algebra is strongly recommended and courses in geometry and physical science are recommended. The student cannot be color-blind.

The immediate and future outlook for electronic technicians at all levels is excellent, especially with the increased production and servicing of complex commercial and military electrical equipment.

ENGINEERING DRAWING

MECHANICAL DRAFTSMEN 007.281

Mechanical draftsmen perform duties specializing in preparing detailed working drawings of machinery and mechanical devices indicating dimensions and tolerances, fasteners and joining requirements, finishes and other engineering data. They may draft multiple-view assembly and sub-assembly drawings as required for manufacture and repair of mechanisms.

They use machines that combine the functions of such instruments as compasses, dividers, protractors and triangles. They also use many engineering handbooks and tables to assist in solving technical problems. Mechanical draftsmen often specialize in a particular field of work, such as machine electrical, hydraulic, aeronautical, or automotive mechanics

They are usually employed by construction companies engineering concerns, manufacturing plants, engineering service contractors, and by many small tool and die shops.

The course is intended to prepare mechanical draftsmen, able to do accurate work, specializing in detailed working drawings of machinery and mechanical devices and who can understand and carry out the directions of designers and engineers.

Workers in this classification must have an aptitude for doing detailed work and for visualizing objects of two and three dimensions. They must have good eye-hand coordination, finger dexterity, numerical ability and the ability to draw neatly and accurately. Courses in algebra, geometry, and mechanical drawing are strongly recommended.

With the expansion of engineering and scientific occupations, the employment opportunities for mechanical draftsmen as supporting workers is expected to increase through the mid 1970's. In the St. Louis area approximately 1,100 mechanical draftsmen were needed to meet industrial and governmental requirements last year.

FITTER-WELDER 819.381

A fitter-welder is one who positions, fits and welds fabricated, cast, and forged components to assemble structural forms, such as machinery frames, tanks, pressure vessels, furnace shells, and building and bridge parts. He works from blueprints and must possess knowledge of welding characteristics of metal. He selects equipment and plans layout, assembly and welding, applying knowledge of geometry, physical properties of metal, effects of heat, allowances for thickness, machining, weld shrinkage, and welding techniques. He lays out, positions, alines, and fits components together. He bolts, clamps, and tack-welds parts to secure them in position for welding. He learns heliarc and "tig" welding processes and is familiar with all basic positions of welding.

Fitter-welders are employed in such industries as shipbuilding, structural steel, automotive, aircraft, guided misseles, space craft, nuclear energy, railroads, radio, television and appliances.

The course is intended to produce a welder who possesses the manipulative skill of a trained manual welder plus a knowledge of jigs, fixtures, welding symbols, and blue prints. The training involves shop experiences in design, layout, cutting and fabrication of metals and the use of advanced techniques of welding. Students study the physical properties of metals, effects of heat, allowances for thickness, machining and weld shrinkage. Graduates are expected to perform work equaling trade standards and to pass the rigid tests used by large employers.

Mechanical aptitude, manual dexterity, ability to read blueprints, and good vision are important for the fitter-welder. Courses in basic mathematics and mechanical drawing are strongly recommended. A good understanding of geometry is an asset.

The number of welding job opportunities is expected to increase by several thousand each year through the mid 1970's as the result of generally favorable longrun outlook for metalworking industries and the wider use of the welding as a method of fastening. The development of new techniques to meet the requirements of the space program will increase employment opportunities tremendously.

KEY PUNCH (Short-Term Summers Only)

KEY PUNCH OPERATOR 213.582

Key punch operators handle records of all type and descriptions. The key punch operators' part in the handling of important records for business is the transcribing of information from manually prepared records to a card in the form of punched holes.

An operator's worth to an organization is judged on both the speed as well as the accuracy of transcribing. Both speed and accuracy can be developed to a certain degree during the training period. Beyond that point an operator's progress depends entirely upon the willingness to practice conscientiously and a sincere desire to succeed.

People who are alert, conscientious, enthusiastic, and willing to work, find key punching not only interesting but stimulating and satisfying. They are proud of their vocation and have every right to be, because of its importance to all kinds of business and government institutions in helping them maintain records accurately, speedily and economically. The course is designed to give the students a complete and thorough knowledge and operating ability of the Key Punch machine and the Card Verifier with the students practicing on the actual work performed by experienced key punch operators on the job. This is a short term course to be offered only in the summer and is designed to provide students with the basic entry skills.

Key punch operators need good eye-hand coordination, finger dexterity, good vision, a memory for details, and the ability to follow instructions. Courses in Basic Business and typing are strongly recommended.

With the increased use of electronic data processing by business organizations, the need for trained key punch operators is expected to increase rapidly. In the St. Louis labor market there were job openings for approximately 1,100 key punch operators this year.

MACHINE SHOP

MACHINIST 600.280 and .281

The all-round machinist is a skilled metal worker who produces parts with machine tools. This increasing complexity of modern machinery and metal working equipment is raising the technical and skill requirements for these craftsmen. A skilled machinist can set up and operate most types of machine tools used by the industry including metal saws, drill presses, grinders, horizontal boring machines, jig borers, lathes, milling machines, planers, shapers, screw machines, thread grinders, turret lathes, and vertical boring mills. His wide knowledge of shop practice and his familiarization with the working properties of steel, cast iron, aluminum, brass, other metals and plastics plus his understanding of the capabilities of the various machine tools, enable him to machine an intricate part which meets precise specifications.

Almost every factory using a substantial amount of machinery employs all-round machinists to keep its mechanical equipment operating. Some all-round machinists work in the production departments of metal working factories where large quantities of idential parts are produced, others work in job shops where a limited number of varied products are made. The following are among the industries where they may be employed: machinery, including electrical; transportation equipment; fabricated metal products, and primary metals; railroads, chemical, food processing and textile industries. The federal government also employs all-round machinists in Navy Yards, ordnance, air force bases and other installations.

This course provides students with the basic skills and fundamental knowledge to enter industry as advanced learners in the widest range of jobs covering an industrial field with over 600 job titles. Training includes understanding machine functions, reading blueprints, making mathematical computations and exercising judgement to attain conformance to specifications. Experience will lead to specialization and students who continue their education after graduation, or become apprentices, have many opportunities for advancement.

Mechanical aptitude, manual dexterity, good visualization of two and three dimensional forms, and good numerical ability are necessary for the good worker. A thorough understanding of basic math and a course in mechanical drawing are recommended. Algebra is also recommended.

Employment opportunities are expected to be very good through 1975. With the growing expenditure for space and defense programs requiring new tooling designs, jobs in the machine trades should increase proportionately. This year there was a need for approximately 3,300 machinists as the result of needs for replacement and because of industrial expansion in the St. Louis labor market area.

OFFSET LITHOGRAPHY

No D.O.T. coding is indicated for this program because it actually involves the basic training required for seven different occupational titles. It will permit the superior student to specialize in the second year in one or more of those for which he possesses the greatest aptitude. These occupations are: Vari-Typist, 203.582; Camera Man, 972.382; Lithographic Artist, 972.281; Stripper, 971.381; Plate Maker, 972.781; Offset Duplicator Operator, 207.782; and Bindery Worker, 643.885.

Workers in offset duplicating occupations are involved in preparing materials, office forms, bulletins, magazines, newspapers and other graphic materials produced by the lithographic process. They perform in-plant operations required in copy preparation, composition, camera work, assembling and stripping, plate-making, presswork and binding.

They operate composing machines, graphic cameras, master exposure units, and offset equipment to reproduce various types of publications. They also perform bindery functions required to complete, package and deliver reproduction work.

The course provides the fundamental knowledge and the skills in the use of various composing machines, the mechanics of photo-lithographic cameras, the fundamentals of halftone photography, the mechanics of lithographic negative stripping and plate making, and the principles and applications of offset lithography. It also includes the training in the use of inks and binding operations.

Workers in these operations should have mechanical aptitude, be proficient in spelling and grammar and should be able to solve practical problems in arithemetic. Normal eye sight and the ability to distinguish colors are also necessary for workers in this field. Courses in physical science and typing are recommended as prerequisites.

The industry is growing rapidly and job opportunities are plentiful. With the increased production of printing materials of various types, job openings are expected to increase rapidly in the next decade.

PRE-EMPLOYMENT

This is a pilot pre-employment program for boys currently enrolled in high-school who are over-age for grade and at least one year behind in school; making unsatisfactory progress and possibly school alienated. However, they should have average ability and be interested in mechanics.

The purpose of the program will be the development of acceptable work habits and attitudes, skill in following directions, ability to work as a member of a team and an understanding of industrial safety and hygiene.

The course content and the program length will be indeterminate and early placement the prime objective. Boys accepted would initially not be working towards high school graduation, but by completing regular admission requirements either at the Vocational-Technical School or by returning to their home school, could subsequently enter the regular program leading to graduation.

Selection of boys for this program will be based on the recommendation of the counselor and administrator indicating the following characteristics:

1. Lack of interest, expressed or indicated, in purely academic courses.

2. Expressed or indicated interest in learning mechanical skills which will qualify them for employment.

3. Grades which are below measured or demonstrated aptitudes or potential for academic achievement.

4. One or more years behind in school.

5. Attitude of indifference towards school.

6. Evidence of good standing in school and no serious behavior problems.

September admissions to this course will be made on meeting the criteria listed above; however subsequent admissions will be permitted whenever an opening occurs in any of the classes because of a student securing employment or transferring back to his original school.

RADIO AND T.V. SERVICE

TELEVISION AND RADIO SERVICE REPAIRMAN (TECHNICIAN) 720.281

The T.V. and Radio Service repairman adjusts radios and television receivers, using handtools and electronic devices. He observes audio and video characteristics to diagnose source of trouble. He adjusts controls to obtain desired density, linearity, focus, and size of picture. He examines chasis for defects. His job is to check and evaluate each possible cause of trouble beginning with the simplest and most common cause, tube failure. In other routine checks he looks for loose or broken connections and for parts that are charred or burned, due to excessive current or mishandling.

The T.V. and Radio repairman tests voltages and resistances of circuits, to isolate defects following schematic diagrams and uses voltmeters, oscilloscopes, signal generators, and other electronic testing instruments. He tests and changes tubes, solders loose connections and repairs or replaces defective parts using audio equipment.

About three-fourths of all service repairmen work in service shops or in stores that sell and service television receivers, radios, and other electronic products. Most of the remaining service technicians were employed by government agencies and manufacturers, including manufacturers that operate their own service branches.

The purpose of this course is to develop the students' skills and knowledge necessary to diagnose trouble and repair radio and television receiving sets. The training includes examining chasis for defects, locating sources of trouble, and making repairs. The use of instruments is included in the training. The skills and knowledge gained will also prepare for jobs installing or servicing intercommunication systems. A good background in mathematics is needed. With additional experience and training, advancement opportunities as technical writers, sales and design technicians, and service training instructors will be available.

Television and radio service repairmen need good numercial aptitude, ability to visualize and recognize relationship of objects, hand-eye coordination and average finger dexterity. Courses in algebra and physical science are recommended. Geometry is highly desirable.

Employment of T.V. and Radio Service Repairmen is expected to increase rapidly during the 1965-1975 decade. In addition, 1,400 job openings annually are expected to result from the need to result from technological improvements and industry growth.

SHEET METAL

SHEET-METAL WORKER 804.281

Sheet-metal workers fabricate, assemble, install, and repair sheet-metal products and equipment such as control boxes, air conditioning and heating ducts, drain pipes, ventilators and furnace casings, according to job order or blueprints. They select gage and type of sheet metal according to product being fabricated and their knowledge of metal.

Sheet-metal workers cut the metal with hand-snips, power-driven shears and other cutting tools. They form the metal with a variety of machines, hammers, and anvils; then weld, bolt, rivet, solder, form or cement the seams and joints.

Sheet-metal workers are employed mainly by plants that fabricate and install heating, refrigeration, and air-conditioning equipment and by contractors engaged in residential, industrial, and commercial building work. Many of these craftsmen work for governmental agencies or business establishments that do their own construction and alteration work; others are self-employed, mainly on repair work or on smaller types of installations. Firms making blowers, exhaust, electrical generating and distributing equipment, food product machinery, and steam turbines also employ skilled sheet-metal workers.

The course provides students with skill training in the basic hand processes, bench layout and cutting, and includes extensive experience with all standard sheet-metal machines and accessory equipment. Related classroom instruction in layout, blueprint reading, mathematics applicable to layout work and the relationship between sheet metal work and other trades is included. Boys trained in this trade have great mobility because of the transfer of skills to aircraft sheet-metal jobs.

Mechanical aptitude, good manual dexterity, average aptitude for spatial and form perception and ability to do neat accurate work are necessary attributes of good sheet-metal workers. Courses in general shop, basic math, and mechanical drawing are recommended. General metals is strongly recommended.

A large increase in the employment of sheet-metal workers is expected as the result of expansion in new building construction with central air-conditioning systems. Approximately 4,300 job opportunities in sheet-metal occupations exist in the St. Louis Metropolitan area at the present time.

TOOL DESIGN

TOOL DESIGNER 007.081

The tool designer prepares plans for broaches, milling machine cutters, drills, and other single or multiple - edged cutting tools, and the related jigs, dies, and fixtures for production or experimental use on metalworking machines. He studies specifications and confers with engineering and shop personnel to resolve design problems related to material characteristics, dimensional tolerances, service requirements, manufacturing procedures and tool costs. He applies algebraic and geometric formulas and standard tool engineering data to develop tool configuration. He selects standard items such as bushings cutters and bits for incorporation into the design of the tool. He draws preliminary sketches and prepares layouts and detail drawings. He modifies tool designs according to trial or production service data to improve tool life or performance.

The largest numbers of tool designers are employed in electrical equipment, machinery, automotive, and aerospace industries.

The course is intended to prepare boys to enter industry as advanced learners with basic skills and knowledge that will permit them to become tool designers who can do accurate work and carry out the directions of engineers. The training includes the application of the principles of physics and engineering and the utilization of heat and mechanical power for the design and production of tools. Students originate and prepare drawings of the designs for cutting tools, jigs, dies, special fixtures and other attachments used in machine tool operations. Additional experience may lead to specialization and students who continue their education after graduation have opportunities for advancement to supervisory positions.

Tool designers must have good mechanical aptitude, must be able to perform arithmetic operations quickly and accurately, and must have good spatial and form perception. Courses in algebra, geometry, physical science, and mechanical drawing are strongly recommended as prerequisites.

With increased manufacturing in the area and growing expenditures for defense and space requiring new tool designs, employment opportunities are expected to be very good through 1975.

The following pages have been excerpted from the informational bulletin which was previously supplied to the Superintendents and Administrators of your district. They contain information regarding student capacities, proposed program, and lay outs of shops and classes in the South County building.

AGRICULTURAL EDUCATION MAGAZINE

This annotated bibliography for use in in-service training in agricultural education was prepared from articles published in "Agricultural Education," July, 1955 to December, 1965. Part I contains 40 articles relating to teacher professional improvement. Part II contains 86 articles on subject matter materials and teaching aids in the areas of: (1) agricultural mechanics, (2) agricultural business and management, (3) adult and young farmer education, (4) curriculum, (5) guidance and leadership, (6) plant, animal, and soil science, (7) public relations, and (8) potpourri of teaching aids. AN ANNOTATED BIBLIOGRAPHY - IN-SERVICE TRAINING IN AGRICULTURAL EDUCATION

I. PROVIDING TEACHERS PROFESSIONAL IMPROVEMENT MATERIALS

ATHERTON, J. C. "Building a Dynamic Vo-Ag Program". Vol. 38, No, 6 (December 1965) P. 133.

The article lists some procedures that one may employ in building a dynamic program of vocational agriculture.

BAIL, JOE P. "Improving Instruction Through Supervision", Vol. 30, No. 8 (February 1958) Pp. 181-182.

The author summarized studies on improving instruction and use of time and trouble in vocational agriculture.

BAIL, JOE P. and RAYMOND CLARK. "Eight Years of In-Service Education for Michigan Teachers of Vocational Agriculture". Vol. 28, No. 8 (February 1956) Pp. 175-176.

A summary of eight years of in-service meetings for the teachers of vocational agriculture in the state of Michigan is given in an analyzed breakdown of subjects, number of meetings, a nd number of teachers attending.

BRINKLEY, HAROLD R. "Basic Concepts for Educating Tomorrow's Teachers". Vol. 37, No. 7 (February 1965) Pp. 189-199.

The article points out the basic concept for educating future teachers in vocational agriculture.

BRISTOL, BENTON K. "The Why and How of Maintaining Technical Competence for Teaching". Vol. 35, No. 7 (February 1963) Pp. 157-158.

The author analyzes the "Why and How" of maintaining technical competence in teaching vocational agriculture.

BUNDY, C. E. "Improving Techniques of Instruction". Vol. 31, No. 5 (November 1958) Pp. 99-102.

The article is an editorial on improving techniques of instruction by employing efficiency analysis techniques used in industry.

BYRAM, HAROLD M. "Choosing and Using Consultants". Vol. 38, No. 6 (December 1965) Pp. 138-139.

This article entails suggestions for choosing and using consultants in program planning.

BYRAM, HAROLD M. "Professional Growth Is An Active Process". Vol. 31, No. 12 (June 1959) Pp. 280-282.

The needs for better professional growth through graduate work, in-service education, and other ways is the main theme of this article.

CLARY, JOE. "Four Steps for Pilot Programs". Vol. 37, No. 1 (June 1964) Pp. 14-15.

Four steps are analyzed for initiating pilot programs.

CONYERS, C. L. "Professional Problems". Vol. 33, No. 1 (July 1960) Pp. 17-18.

The author has published the findings of a study on professional problems of beginning teachers in vocational agriculture in Virginia.

COOPER, ELMER. "Professional Improvement on the Local Level". Vol. 34, No. 3 (September 1961) P. 70.

This suggested list of areas for observation at the local level can improve one professionally when he observes what other teachers are doing.

DEEMS, HOWARD W. "In-service Education". Vol. 30, No. 8 (February 1958) Pp. 176-183.

A study which evaluated in-service education needs in Nebraska for teachers of agriculture revealed a felt need for and areas of interest in in-service education.

DEEMS, HOWARD W. "Team Teaching in Vocational Agriculture". Vol. 34, No. 10 (April 1962) Pp. 226-228.

An agricultural educator explains the use and value of team teaching in vocational agriculture.

DEYOE, GEORGE P. "In-Service Education". Vol. 29, No. 6 (December 1956) Pp. 135-136.

The present status, future plans and changes desired for in-service education.

DEYOE, GEORGE P. "The Teacher Needs Help". Vol. 29, No. 2 (August 1956) Pp. 28-29.

The article suggests the importance, ways and means of developing a program to meet the needs of teaching materials for teachers of agriculture.

DRAKE, WILLIAM E. "Summer Activities that Count". Vol. 37, No. 2 (August 1964) Pp. 36-37.

This article illustrates the value of well planned summer programs in vocational agriculture. It suggests the use of a calender for efficient implementation of summer scheduled activities.

ENTWISTLE, CHARLES C. "The Scope of Professional Improvement". Vol. 28, No. 8 (February 1956) P. 182.

Twenty-three different ways are listed that teachers of agriculture may improve themselves professionally.

FULLER, GERALD R. "Guidelines for Teaching OFAO". Vol. 37, No. 6 (January 1965) Pp. 167-168.

This article points up eight guidelines for preparing students for off-farm agricultural occupations.

HANNEMANN, JAMES. "Programmed Learning in Agricultural Education". Vol. 36, No. 1 (July 1963) Pp. 5-6.

The article reveals the historical development and the use of programmed instruction.

HEMP, PAUL E. "Evaluating Instructional Programs". Vol. 36, No. 12 (June 1964) Pp. 272-273.

The author delineates the need for and procedures of evaluating vocational agriculture programs.

HEMP, PAUL E. "Improving Teacher Practice". Vol. 36, No. 7 (January 1964) Pp. 124-126.

A teacher educator shares his views on ways to improve teaching practices.

HILL, C. W. "Plan and Work the Summer Program". Vol. 30, No. 12 (June 1958) Pp. 278-279.

The article shares suggestions for busy teachers to plan and improve the summer program.

KREBS, A. H. "Effective Use of Teaching Aids". Vol. 33, No. 3 (September 1960) Pp. 51-52.

An editorial pointing out weaknesses and effectiveness in the use of teaching aids.

MARTIN, W. HOWARD. "Tomorrow's Teacher - An Agricultural Specialist". Vol. 37, No. 7 (February 1965) Pp. 190-191.

This article points out the importance of technical competency, professional proficiency, selection and recruitment and job satisfaction as basic elements in educating tomorrow's teachers.

MORGAN, MARION. "Professional Improvement". Vol. 32, No. 2 (August 1959) Pp. 29-30.

A review of the aspects of self-improvement coupled with ways of improving one professionally are the highlights of this article.

ORE, STANLEY H. "Professional Improvement on the Job". Vol. 32, No. 4 (October 1959) Pp. 76-77.

A teacher of agriculture listed the needs, ways and means of professional improvement on the job.

PHIPPS, LLOYD J. "Organizing for Research Development". Vol. 38, No. 6 (December 1965) P. 132.

The article lists some of the suggestions for meeting research and development needs in agricultural education.

RICE, RICHARD C. "Time for Professional Improvement". Vol. 28, No. 12 (June 1956) Pp. 271-278.

A teacher of agriculture in Ohio shares his views toward planning and the need for professional improvement.

RICHARD, C. E. "Teaching Basic Principles in Science in the Vocational Agriculture Curriculum". Vol. 36, No. 7 (January 1964) Pp. 129-130.

Teaching basic principles in Science in vocational agriculture is essential according to a study by the author.

SALMON, VINCENT A. "Human Resources for Teaching ". Vol. 31, No. 5 (November 1958) P. 109.

Human resources are emphasized by the author as effective resources for teaching vocational agriculture.

SCARBOROUGH, C. C. "Teachers' Unit' or 'Subject Matter' Planning". Vol. 29, No. 3 (September 1956) P. 56.

This is an approach to improved planning for effective teaching.

SCHWARZ, HONALD. "Plan for Summer School". Vol. 33, No. 11 (May 1961) Pp. 250-251.

Plan for Summer School but do not overlook the summer vo-ag program responsibilities.

SLEDGE, GEORGE W. "Resources for Effective Teaching". Vol. 35, No. 9 (April 1963) Pp. 205-206.

The article points up the need, use and categorization of resources for effective teaching.

SMITH, CLODUS R. "Professional Training of the Vocational Agriculture Teacher". Vol. 32, No. 3 (September 1959) Pp. 68-69.

The author has published the results of a study, using 48 land-grant colleges in the U.S. as respondents on teacher professional training in agriculture.

TAFT, JESSIE A. "Growing Professionally". Vol. 31, No. 8 (February 1959) P. 171.

The state supervisor of Massachusetts listed the program of professional improvement in which Massachusetts Vo-Ag teachers participated.

TAYLOR, ROBERT. "The Professional Teacher and the State Program". Vol. 37, No. 10 (April 1965) P. 237.

The article delineated ways that teachers may contribute to the development and execution of the state program for agricultural education.

THOMPSON, EVANS G. "Six Types of Supervised Practices for Virginia High School Students". Vol.36, No. 2 (August 1963) Pp. 30-31.

Six major classes of supervised practice experience programs are listed that are used by teachers in Virginia.

TOM, F. K. T. and JAMES A. SCANLON. "Programmed Instruction in Agriculture Limited". Vol. 38, No. 5 (November 1965) Pp. 110-111.

A study of teacher education departments revealed that agricultural educators are using programmed instruction on a very limited basis in spite of its effectiveness.

TORRENCE, ANDREW P. "Professional Improvement is Essential". Vol. 29, No. 6 (December 1956) P. 133.

The article delineates the values of professional improvement to effective teaching and professional standing.

WOODIN, RALPH J. "Common Competencies for All Teachers". Vol. 37, No. 7 (February 1965) P. 187.

The author has listed the competencies needed by teachers of agriculture.

II. PROVIDING TEACHERS SUBJECT MATTER MATERIALS AND TEACHING AIDS

AGRICULTURAL MECHANICS

BEYL, DOYLE. "Teaching Teachers Milking Machine Operation". Vol. 37, No. 6 (December 1964) Pp. 150-151.

The teachers of agriculture in Wisconsin attended a workshop on milking machine problems for in-service education. It was sponsored by the State Board of Vo-Ed, College of Agriculture and milking machine companies.

CLOUSE, JAMES P. and J. MARVIN EBBERT. "Start with Small Engines". Vol. 36, No. 9 (March 1964) Pp. 197-215.

Teachers should start with small engines when they teach farm power-maintenance and repair. A unit of instruction is outlined in this article.

COTTON, DALE A. "Farm Mechanic Instruction for Oklahoma Teachers". Vol. 36, No. 12 (June 1964) Pp. 285-286.

A group of Oklahoma teachers (39) took a refresher course in agricultural engineering at evenings and on Saturdays for graduate and in-service training.

DRAKE, WILLIAM E. and LEON J. ALGER. "Practical Farm Mechanics". Vol. 34, No. 7 (January 1962) Pp. 163-164.

The authors advocated the philosophy of developing the ability in farm mechanics to stimulate the desire in students to do project work. A sample course outline for farm mechanic is embodied in the story.

DUGGER, ROY W. "Teachers 'OK' In-Service Training". Vol. 29, No. 4 (November 1956) P. 104.

A group of Oklahoma teachers of agriculture received in-service education through pilot schools in farm irrigation.

FULLER, JOHN. "Michigan Teachers Work with County Agents on Adult Farmers Courses". Vol. 35, No. 5 (December 1962) P. 114-115.

Vocational agriculture teachers and country agents in Michigan held small group seminar on farm machinery as an in-service training meeting.

GADDA, H. W. "Improving Farm Mechanic Programs". Vol. 31, No. 7 (January 1959) Pp. 157-158.

The article lists the areas of farm mechanics that should be improved as witnessed by A.V.A. research studies.

HAMILTON, J. R. "Teaching Farm Electrification". Vol. 31, No. 7 (January 1959) Pp. 155-156.

The divisions, fundamentals, selection and care of motors, of electricity are outlined for agricultural instruction.

LUTHER, M. K. "A Farm Mechanic Workshop". Vol. 28, No. 8 (February 1956) P. 189.

California vocational agriculture teachers spent 30 hours during the summer in farm mechanic workshops for professional improvement.

McCLAY, D. R. "A Suggested Four Year Course Outline for Teaching Farm Mechanics". Vol. 28, No. 2 (August 1955) P. 43.

This four year course outline was developed to help teachers plan for farm mechanics phase of his vocational agriculture program.

NOHLE, ERNEST F. "Farm Machinery Workshops". Vol. 31, No. 7 (January 1959) Pp. 148-163.

A New York State supervisor shares experiences of a farm machinery workshop at Cornell University under the joint sponsorship of the Teacher-Training Division and the State Bureau. It was a "do it yourself" workshop. Participants came from the State Agricultural and Technical Institutes.

PECK, DWIGHT L. "Scale Models Provide Building Experience". Vol. 31, No. 7 (January 1959) Pp. 154-156.

Scale models are effective methods of teaching building construction in vocational agriculture.

PURKEY, D. R. "Ohio In-Service Training Program". Vol. 31, No. 5 (November 1958) P. 112.

Two hundred fifty-six teachers of agriculture participated in three broad areas of in-service education--tractor maintenance, oxyacetylene welding and electric motors.

SCHWEIKHARD, EARL. "The Farm Shop Goes to the Fair". Vol. 31, No. 7 (January 1959) Pp. 153-165.

The Oklahoma F.F.A. promotional and educational farm mechanic event was at the Tulsa State Fair.

TAYLOR, LEWIS C. "Summer Help for Minnesota Teachers in Farm Machinery Operation". Vol. 35, No. 7 (February 1963) Pp. 159-160.

Minnesota teachers of agriculture experienced in-service training in farm machinery operation by using two-day workshops.

WOODIN, RALPH J. "Ohio Teachers Work with Electric Power Suppliers". Vol. 28, No. 8 (February 1956) P. 177.

Three hundred forty teachers of agriculture in Ohio attended the Ohio Farm Electrification Council at General Electrics Nela Park Lighting Institute two days for professional improvement.

AGRICULTURAL BUSINESS MANAGEMENT

CHRISTENSEN, HOWARD. "A Contest Aids in Teaching Farm Management in Nevada". Vol. 36, No. 3 (September 1963) Pp. 56-70.

The article illustrates a success story where a teacher used a contest to motivate interest in farm management.

CAMPBELL, JULIAN C. "In-service Education in Farm Management". Vol. 36, No. 3 (September 1963) P. 55.

The teachers of agriculture in Virginia used a specialist to conduct their in-service education program in farm management.

EDINGTON, EVERETT D. "Providing Teachers Farm Management Materials". Vol. 36, No. 3 (September 1963) P. 59.

The author shares the belief that teacher educators and supervisors should provide teachers with materials to teach farm management as part of the in-service training responsibility.

FOX, F. and N. K. HOOVER. "Facts and Information for Estimating Budgets for Productive Enterprise Projects in Vocational Agriculture". Vol. 28, No. 2 (August 1955) P. 43.

This is a collection of basic information - in handbook form to be used by students as they plan individual farm programs and prepare budget estimates.

GREEN, H. W. "State Plan Aids in Teaching Farm Management". Vol. 36, No. 6 (December 1963) Pp. 163-164.

The Alabama State Plan Aids vocational agriculture teachers with farm management.

HAMILTON, WILLIAM H. and CLARENCE E. BUNDY. "Agricultural Competencies in Retail Feed Businesses". Vol. 37, No. 6 (January 1965) Pp. 175-179.

This Iowa study of agricultural competencies in retail feed businesses identified job opportunities that existed and the competencies that one needs to fulfill the jobs.

ADULT AND YOUNG FARMER EDUCATION

BRUM, H. D. "Organizing the State Young Farmer Convention". Vol. 37, No. 5 (November 1964) Pp. 112-113.

This article presents a descriptive and pictorial analysis on how to organize a state young farmer convention.

BRUNNER, H. S. "A Program for Young Farmer Instruction in Vocational Agriculture in the State of Maine". Vol. 28, No. 2 (August 1955) P. 43.

This mimeograph (objectives and evaluation criteria) was developed in a workshop for vo-ag teachers at the University of Maine.

HENNING, DONLEY. "Expanding Vocational Agriculture through Television". Vol. 33, No. 3 (September 1960) Pp. 61-62.

One of the most effective means of stimulating mass interest is through television for adult and young farmer instruction.

HERBST, J. H. "Analysis Charts for Studying Farm Efficiency". Vol. 36, No. 3 (September 1963) Pp. 63-64.

Analysis charts may serve as teaching aids in teaching young and adult farmers.

REIDEL, JR., WALLACE F. "Farm Tours Emphasized in Iowa". Vol. 37, No. 5 (November 1964) P. 110.

A Vo-Ag Program in Iowa capitalizes on the young farmer program by using farm tours as effective methods.

SYNDER, FRED C. "College Short Courses Aid Teachers of Young and Adult Farmers". Vol. 31, No. 3 (September 1958) Pp. 69-71.

The author examines and analyzes the value of short courses for teachers of young and adult farmers at land grant college and university as in-service training.

CURRICULUM

AGAN, R. J. "Kansas Studies Agriculture Non-Farm Occupations". Vol. 37, No. 1 (July 1964) Pp. 15-16.

This article reveals how Kansas studied agriculture non-farm occupations.

BROWN, WILLIAM J. "Teaching Guides Can Speed Curriculum Changes". Vol. 37, No. 7 (February 1965) Pp. 198-199.

The article points out the fact that changing curriculum is difficult and maybe expedited by preparing and distributing curriculum guides.

BULLARD, A. G. "A New Design for High School Vocational Agriculture". Vol. 37, No. 1 (July 1964) Pp. 8-10.

This article illustrates the new program design in vocational agriculture (H.S.) in North Carolina with pictures, a model, and a descriptive analysis.

FRASER, GEORGE. "A Four Phase Curriculum for Farm Related Occupations". Vol. 37, No. 6 (January 1965) Pp. 174-175.

A Massachusetts vo-ag teacher explains his four phase curriculum for farm related occupations.

NOAKES, HAROLD L. "Planning Local Programs to Meet Interest and Needs". Vol. 38, No. 6 (December 1965) Pp. 126; 140-141.

The article points out the importance of planning local programs to meet the interest and needs of the program clientele.

GUIDANCE AND LEADERSHIP

McCALLA, FRANK. "Oklahoma F.F.A. - Forward with T.V.". Vol. 30, No. 9 (March 1958) Pp. 209-211.

A study was conducted in Oklahoma (225 teachers) vocational agricultural departments on best times to telecast programs and inadequacies of teachers in T.V. preparations.

KNUTI, LES L. "Teachers Should Be Full Members of Leadership Team". Vol. 38, No. 3 (September 1965) P. 64.

The article suggests that teachers of agriculture be made full members of the leadership team for agricultural education along with supervisors and teacher educators.

STEPE, CHARLES L. "Teachers Must Work with Counselors". Vol. 38, No. 3 (September 1965) P. 57.

The article suggests that teachers of agriculture must work with counselors in making follow-up studies to evaluate existing programs.

WILLIAMS, JAMES. "The F.F.A. as a Resource in Teaching". Vol. 38, No. 4 (October 1965) Pp. 81-86.

The F.F.A. can be used as a resource of great worth in teaching as a teaching aid and a learning device.

PLANT, ANIMAL AND SOIL SCIENCE

BAILEY, ZENO. "The Land Judging Workshop". Vol. 31, No. 5 (November 1958) P. 113.

The land judging workshop is an effective tool for teaching soil and water management to teachers of agriculture.

LUSTER, GEORGE L. "The Workshop - A Tool for Professional Improvement". Vol. 28, No. 12 (June 1956) Pp. 275-278.

The author shares his experiences in conducting nine soil workshops in Kentucky in cooperation with other agricultural agencies for teachers of vocational agriculture.

LEWIS, H. N. "A Foundation Beef Bull Program for Alabama". Vol. 36, No. 7 (January 1964) Pp. 139-140.

Alabama uses the beef bull program to provide educational opportunities for vo-ag students, young and adult farmers.

NICHOLSON, N. C. "Teaching Aids Found in State Land Judging Contest". Vol. 30, No. 3 (September 1957) P. 61.

A land judging contest in Wisconsin provides a bountiful source of teaching aids.

QUARLES, N. K. "School Forestry Plot as an Aid to Instruction in Teaching Vocational Agriculture". Vol. 35, No. 7 (February 1963) Pp. 165-166.

The author points out the need, value and use of forestry plots as a teaching aid in vocational agriculture.

SMITH, EDMAN. "Livestock Shows an Educational Resource". Vol. 38, No. 4 (October 1965) P. 82.

Livestock shows afford many educational experiences for students and they are meaningful resources available to vo-ag teachers.

WILSON, DONALD. "Junior Livestock Auctions are Important". Vol. 35, No. 9 (April 1963) Pp. 212-213.

California uses junior livestock auctions as teaching methods and for financial support.

PUBLIC RELATIONS

ARMOND, LESTER A. "Public Relation Devices". Vol. 31, No. 8 (February 1959) Pp. 182-191.

The author listed two activities that had greatly enhanced public relations in a Louisiana school district.

SCHANK, L. C. "Use Resource People to Enrich Your Vo-Ag Program". Vol. 35, No. 7 (February 1963) P. 173.

The article illustrates the value and use of local resource people to assist with the vo-ag program.

SCHMIDT, PHILIP E. "Improving Short News Articles". Vol. 35, No. 2 (August-September 1962) P. 53.

The article illustrates ways of improving short news articles for the agriculture program.

TODD, HOLLIS E. "An F.F.A. Banquet May Provide an Avenue of Communication for Revitalizing the Vocational Agriculture Image". Vol. 35, No.11 (June 1963) Pp. 265-266.

The article points out the values of F.F.A. banquets in revitalizing the image of vo-ag.

WHITE, J. A. "News Writing Workshop for Alabama Teachers". Vol. 30, No. 6 (December 1957) P. 141.

Twenty-one Alabama teachers of agriculture completed a three day workshop in news writing.

POTPOURRI OF TEACHING AIDS

ADAIR, W. T. "What About Your Next Exhibit?". Vol. 34, No. 3 (September 1961) P. 68.

A graduate assistant shares a list of suggestions or ideas in preparing exhibits and making them look realistic.

ANTHONY, FRANK. "How to Use Charts Effectively". Vol. 31, No. 5 (November 1958) P. 106.

A pictorial demonstration on the use of magnetic charts as effective teaching aids.

BAIL, JOE P. "Some Suggestions on Filing Materials". Vol. 30, No. 3 (September 1957) Pp. 69-71.

The article shares suggestions on what to file, maintenance and use of a filing system.

COCHRANE, T. A. "A Land Laboratory". Vol. 31, No. 5 (November 1958) P. 110.

A teacher comments on the problems and advantages that one finds in operating a land laboratory as a teaching aid.

DECKER, BIRON E. "T.V. Education Unlimited". Vol. 30, No. 9 (March 1958) Pp. 207-208.

The Future Farmers of America of N.W. Pennsylvania lead, learn, and teach with a regularly scheduled T.V. Program.

DALONEY, J. E. "Learning from the Environment". Vol. 34, No. 3 (September 1961) P. 51.

An editorial confirms the point that one learns from his environment.

FULLER, GERALD and FREDERICK K. T. TOM. "Make Those "2 x 2" Slides Yourself". Vol. 30, No. 3 (September 1957) Pp. 67-68.

Plans and pictures for instructing home made equipment to make "2 x 2" slides.

FOOTE, DUANE. "Let's Do Something About Teaching Aids". Vol. 30, No. 3 (September 1957) P. 52.

A study by the author "Factors Affecting the Use of Selected Teaching Aids by Teachers of Vocational Agriculture in Nebraska" shows a need for action.

GARRIS, E. W. "A Method of Professional Improvement". Vol. 31, No.5 (November 1958) P. 117.

Reading the Agricultural Education Magazine is recommended as a method of professional improvement for teachers of agriculture.

GELBERTSON, RAY. "The Use of Audio Visual Aids". Vol. 31, No. 5 (November 1958) P. 108.

Some suggestions are listed for the use of audio visual aids along with seven outlined advantages in teaching vocational agriculture.

JENSEN, A. K. "Low Cost Overhead Transparencies". Vol. 38, No. 6 (December 1965) Pp. 140-142.

This article presents detail procedures for preparing transparencies for the overhead projector at minimal cost.

HAIGHT, PHILLIP A. "Using the School Farm Effectively". Vol. 33, No. 12 (June 1961) Pp. 275-276.

A teacher of agriculture in Massachusetts published his views on the use of school farms as practical farm laboratory.

HALL, B. F. "Teaching Aids and Devices Used in Teaching Farm Record Keeping for Teachers of Vocational Agriculture". Vol. 35, No. 9 (April 1963) P. 215.

A teacher lists the results of a study on teaching aids used in teaching record keeping.

HAMILTON, JAMES. "Make Field Trips Educational". Vol. 33, No. 3 (September 1960) P. 56.

One may make field trips educational by assigning responsibilities to students.

HOPKINS, H. PALMER. "Are You Getting the Most Out of Field Trips?". Vol. 33, No. 3 (September 1960) P. 55.

The author shows his views on how teachers may get the most out of field trips.

HOPKINS, H. PALMER. "Have You Overlooked A Valuable Teaching Aid?". Vol. 29, No. 3 (September 1956) P. 54.

The new opaque projector is recommended as a valuable teaching aid.

KNAKE, ELLERY L. "Soil Color Made Easy". Vol. 31, No. 5 (November 1958) Pp. 101-102.

The author introduced the use of pocket size color charts as teaching aids in teaching soils.

LAWRENCE, JIMMIE G. "Use Local Materials in Teaching". Vol. 34, No. 3 (September 1961) Pp. 67-68.

A teacher illustrates his techniques in using local materials in teaching.

McCOMAS, J. D. "EFT Can Be An Effective Teaching Aid". Vol. 33, No. 5 (November 1960) Pp. 110-111.

Evening field trips are effective teaching aids for young and adult farmer education.

MEINKE, FRED V. "Teaching Aids". Vol. 30, No. 3 (September 1957) P. 59.

This article points out the need for teachers of agriculture to use teaching aids outside the classoom.

McPHERSON, D. E. and V. R. CARDOZIER. "Charts, Graphs and Tables". Vol. 31, No. 5 (November 1958) Pp. 100-104.

The authors conducted a study to determine teacher and student needs in regards to reading level, intelligence quotient and scholarship of students.

NORTON, WESLEY. "Labor Savers for Fair Booths". Vol. 37, No. 8 (March 1965) Pp. 228-229.

This article presents some labor saving ideas relative to the preparation of fair booths.

PATTERSON, J. J. "Chart Preparation, Preservation and Storage". Vol. 34, No. 3 (September 1961) Pp. 53-55.

The author shares his experiences on the preparation, preservation and storage of charts in teaching.

QUARLES, N. K. "The Overhead Projector, A Modern Teaching Aid". Vol. 35, No. 9 (April 1963) Pp. 209-210.

The article explains the use and application of the overhead projector as a teaching aid.

RIDEVOUR, HARLAN E. "Prepare Your Own Teaching Aids". Vol. 30, No. 4 (October 1957) Pp. 91-92.

A vocational agriculture teacher shares advice on the preparation and use of teaching aids.

ROBIN, CLARENCE. "Fair Exhibits are Resources".. Vol. 38, No. 4 (October 1965) P. 77.

A Louisiana vo-ag teachers uses fair exhibits as teaching resources. They also create public relations and understanding.

SALESBURY, G. H. "Professional Improvement Can be Intensive". Vol. 28, No. 8 (February 1956) P. 186.

A group of teachers of agriculture attended a special welding school at Lincoln Electric Company at Cleveland, Ohio for professional improvement.

SLEDGE, GEORGE W. "Organization and Use of a Curriculum File for Teaching Efficiency". Vol. 35, No. 7 (February 1963) Pp. 164-165.

This article explains the function and use of curriculum files to facilitate teaching efficiency.

TERRY, J. Y. "Using Teaching Aids". Vol. 31, No. 5 (November 1958) Pp. 107-117.

Numerous opportunities are listed whereby the teacher of agriculture may incorporate the visual materials in the teaching program.

TIMMONS, GUY E. "Field Trips Can Be Effective Teaching Aids". Vol. 28, No. 12 (June 1956) Pp. 280-281.

The use of field trips as teaching techniques and effective teaching aids is illustrated in this article along with a list of preparation and a suggested field outline.

TOWNE, DOUGLAS C. "Flexibility in Planning". Vol. 35, No. 1 (July 1963) Pp. 7-8.

The author illustrates the flexibility in planning by the use of a planning board.

STEPHENS, GERALD O. "Operating a Movie Projector". Vol. 31, No. 5 (November 1958) Pp. 105-117.

The author outlines the steps and procedure that the teacher of agriculture might follow in operating a movie projector as a teaching aid.

STERN, MERWIN. "The Use of Farm Periodicals in Teaching". Vol. 30, No. 3 (September 1957) P. 64.

A study was made in Kansas to determine the extent farm periodicals are used in teaching. Ninety-five percent of Kansas vo-ag teachers have and use farm periodicals in teaching.

STOTZ, CARL R. "Planning a Series of Slides for Teaching". Vol. 31, No. 5 (November 1958) Pp. 105-117.

The author points out in this article the practicality of a vo-ag teacher planning a series of slides based upon the local farming enterprises.

WALL, JAMES E. "The Utilization of State Agricultural College Publications in Vocational Agriculture Departments". Vol. 35, No. 9 (April 1963) P. 207-209.

The author reveals the results of a study on the use of technical and applied publications from state agricultural colleges.

WEBB, E. M. "Is the Fair Booth Worthwhile?". Vol. 34, No. 3 (September 1961) Pp. 63-64.

A state supervisor in Washington delves into the virtues of exhibits at state fairs sponsored by vo-ag departments.

WICKS, LYLE. "The Place of Television in Vocational Agriculture". Vol. 32, No. 8 (February 1960) Pp. 181-182.

A teacher of agriculture has published his views on the place of T.V. in Vo-Ag along with problems and limitations.

Parsons, Warren, And Others
The Greenhouse Grower: Analysis of Training Needs and Career Information for Instructional Planning.

Michigan State Univ., East Lansing. Agricultural Education Programs
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 67 16p.

*ORNAMENTAL HORTICULTURE OCCUPATION; *EDUCATIONAL NEEDS; *EMPLOYMENT OPPORTUNITIES; *PLANTS; *JOB SKILLS; OCCUPATIONAL SURVEYS
DETROIT; MICHIGAN; CLEVELAND; OHIO; CHICAGO; ILLINOIS

Personal interviews were conducted with the managers of 58 of the 64 greenhouses of one acre or more in the Chicago, Cleveland, and Detroit areas to ascertain the nature of production, employee educational needs, and job characteristics. These commercial greenhouses grew at least 59 species of ornamental flowering plants. Geraniums, chrysanthemums, poinsettias, lilies, and azaleas were grown in over half of the greenhouses. Greenhouse managers desired employees who have a high school education and practical work experience and wanted the employees to have a knowledge of plants, operational ability, an understanding of cropping practices, greenhouse management skills, and other less essential competencies. There were employment opportunities for youth and adults as greenhouse helpers and opportunity existed for advancement to managerial positions in the greenhouse industry. (JM)

THE GREENHOUSE GROWER[1]:

ANALYSIS OF TRAINING NEEDS AND CAREER INFORMATION FOR INSTRUCTIONAL PLANNING

by Warren Parsons[2], Harold Byram,[3] Richard Lindstrom[4]

Many teachers of vocational agriculture have,or will be broadening their curricula to include ornamental horticulture and floriculture. Greenhouses and other growing facilities are being added to departments. As teachers have tackled the problem of what they should teach, they have been confronted with the question of what competencies the greenhouse grower should possess, as well as what plants should be grown by trainees to gain needed competencies. This study was designed to answer some of these questions.

During the last ten years significant changes have occurred in agriculture. One of the major changes has been the increasing number of persons employed in off-farm agricultural occupations. Some of the reasons for this trend include technological developments in the processing and distributing of agricultural products, and urbanization increasing the demand for agricultural goods and services.

One group of off-farm agricultural occupations which will need increasing numbers of agriculturally trained employees is that of ornamental horticulture. For example, Judge estimated that in 1965 there were 4,630 full-time and 2,420 part-time ornamental horticulture workers in the state of Massachusetts. This represented about 22 percent of the total number of off-farm agricultural employees, the largest occupational group in the study.[5]

Ornamental horticulture is increasing in importance because more plants are being used inside and outside of homes, around public and private buildings, along city streets and highways, in parks, and in recreational areas. In the last ten

years, according to Tukey, the value of horticultural specialties, including cut flowers, bedding and foliage plants, and nursery crops has more than doubled. Tukey has said that horticulture is especially active throughout the world, and no aspect of horticulture has greater promise than floriculture and ornamental horticulture.[6]

The National Beautification Program has created a critical shortage of plant materials and trained workers for ornamental horticulture. Most of the recent off-farm agricultural occupational studies, including the ornamental horticulture occupational family, have inquired into the general areas of competencies such as agriculture, business, and mechanics for the various job titles.

Clark, Kennedy, and others have indicated that further study is needed of off-farm agricultural occupations to determine more specifically the requirements of employees in these areas.[7] Therefore, previous studies indicate that more qualitative types of studies of competencies required of workers in off-farm agricultural occupations are needed.

Two occupational titles listed under ornamental horticulture are those of the greenhouse grower and worker. One state survey identified this area as needing 358 new employees within the next five years.[8]

Annual summaries of studies in agricultural education have not listed any specific studies of the greenhouse grower, his training, or his employment. Therefore, the purposes of this study were to determine the nature of the training desired for the commercial greenhouse grower, in terms of the relative importance of the species of ornamental flowering plants produced and of the degree of attainment of competencies needed. The study would also secure employment information relating to greenhouse workers that could be of value in guidance and training such workers.

What Previous Studies Have Shown

A review of studies of off-farm agricultural occupations revealed that the field of ornamental horticulture has offered opportunities for employment by the many businesses and employees engaged in this industry. Most of the studies were preliminary in specific employment information and competencies for specific occupations, and were limited to certain areas within a state. Investigators pointed out occupational opportunities at all levels of employment, requiring the largest number of workers in the semi-skilled category, followed in order by skilled, managerial, supervisory, sales, clerical, technical, and professional employees. Other employment information specifically for ornamental horticulture included: (1) the average minimum and maximum age of entry for all levels of employment was 25 and 51 respectively; (2) the median monthly salaries by level of employment, as between $213 and $677; (3) that most managers desired at least a high school education for entry jobs, while some desired post-high school and others four years of college; (4) and that 21 percent of the managers preferred a farm background for employees, but with 75 percent who had no preference in regard to residential background.

Because most of the studies dealing with ornamental horticulture asked for general occupational information, employment information such as salaries, age of entry, and education were omitted completely, or partially, or were included under all occupational families. The researchers did not ask for specific understandings, skills, and abilities desired for employees.

Very little employment information such as the kind sought by the present study was uncovered through review of studies that had been made of the floriculture industry. There was a total of 839 full-time employees and 268 part-time employees in the studies reviewed. Employers expected to hire 154 full-time and 346 part-time

employees in the ensuing five years. The total number of employees for floriculture could not be estimated because they were listed under other horticultural job titles. There were no specific kinds of employment information for floriculture, such as minimum age of entry, salary, and union requirements. There were only two general areas of training for floriculture employees found in the review of literature: plant science and agricultural competencies. The total number of greenhouse employees expected in 1969 was 378 full-time and 224 part-time. No occupational studies of the greenhouse industry, as such, were found in the literature. The only information found was provided as small parts of larger studies of one or more occupational families.

Procedures Followed in the Present Study

A personal interview was conducted with each of the managers of 58 greenhouses out of 64 which covered one acre or more in the Chicago, Cleveland, and Detroit areas

The data were analyzed by tabulating species of flowering plants grown in pots, as cut flowers, and in flats; the training of the greenhouse grower desired by managers; and the employment information supplied by them. These data were taken from the interview form and total numbers and/or percentages computed.

Plants Produced Indicating Need for Instructional Emphasis

The first purpose of the study was to determine the species of ornamental flowering plants produced in commercial greenhouses, and to note their importance according to the percentage of greenhouses growing major and minor plants, in order to provide a basis for the development of suitable instruction for greenhouse growers. A "major crop" was defined as "any crop producing ten percent or more of the gross

income of the business whether grown as pots, cut flowers, or as flats".

Potted Plants

The percentage of managers growing potted plants, either as a major or minor enterprise, is shown in Table I. Twenty-two other plants were grown by two or four percent of the greenhouses. Only five of these crops (geraniums, chrysanthemums, poinsettias, lilies, and azaleas) were grown in half or more of the greenhouses surveyed. These crops also have had the greatest wholesale value in the United States compared to all the species of potted plants included in the survey.

Cut Flowers

According to a national survey, the varieties of cut flowers grown in the United States in 1959 were ranked in order as roses, chrysanthemums, carnations, and snapdragons. In that study chrysanthemums were grown in 64 percent of the greenhouses, carnations in 43 percent, and snapdragons in 30 percent. Roses and irises were raised in 12 percent. Roses are considered as a crop grown usually by specialists. As a result, the percentage of greenhouse companies producing roses is not large in comparison to the total number of roses grown. These five crops were also grown in greenhouses which employed the largest number of workers. Callas, orchids, gladioli, daffodils, delphiniums, stephanotises, sweet peas, and stocks were grown in three to seven percent of the greenhouses. Nine other plants were grown in two percent of the greenhouses.

Table I. Total Number and Percentage of Greenhouses Growing Major and Minor Potted Plants

Name of Plant	Number Major	Number Minor	Number Total	Percentages of Greenhouses Growing
Geraniums	30	11	41	74
Chrysanthemums	25	4	29	52
Poinsettias	24	4	28	50
Lilies	21	7	28	50
Azaleas	18	10	28	50
Hyacinths	9	11	20	36
Hydrangeas	5	13	18	32
Tulips	9	8	17	30
Begonias (root)	2	13	15	27
Begonias (tuberous)	1	14	15	27
Roses	9	5	14	25
Gloxinias	2	11	13	24
Vincas	1	12	13	24
Caladiums	1	11	12	22
Cyclamens	3	8	11	20
Lantanas	1	10	11	20

Daisies	1	2	3	6
Cacti	1	2	3	6
Pachysandras	0	3	3	5
Stephanotises	0	3	3	5

Flats

Flatted material is sometimes referred to as bedding plants. In certain regions of the country the production of these bedding plants has constituted the major percentage of the floriculture industry. As an example, the areas around Detroit and Kalamazoo, Michigan, are considered major bedding-plant areas, and it has been estimated that $2.5 million on the wholesale level are produced here annually. Many of these plants are shipped as far south as the Carolinas and west as far as Missouri. The most popular plants grown in flats were alyssum, petunias, and salvias produced in 32 to 45 percent of the greenhouses. Another group of 14 plants (marigolds, ageratums, zinnias, portulacas, verbenas, impatiens, vegetables, snapdragons, pansies, asters, phlox, coleus, balsams, and delphiniums) was produced in 25 to 29 percent of the greenhouses, and a third group included 6 plants (dahlias, daisies, cosmos, larkspurs, carnations) while begonias (root) were grown in four to 20 percent of the greenhouses. Six other plants were grown in two percent of the greenhouses. There is an observed correlation between the type of flat grown and the size of the greenhouses. Greenhouse operators who specialized in growing the more popular types of bedding plants were also the largest producers.

Competencies Desired

The second purpose of the study was to determine the relative importance and degree of attainment of competencies in the greenhouse grower desired by employers.

Knowledge of fundamental information was included under four content areas of plant science: (1) external plant parts (e.g. root and stem), (2) growth processes, (3) plant names, and (4) anatomical parts (e.g. xylem and phloem) (Table II). At least two-thirds of the managers indicated that knowledge of basic plant parts, basic growth processes, and plant names was essential for the greenhouse grower. In the minds of the operators it was not important to know the various vascular systems in order to grow plants.

Table II. Percentage of Managers Who Indicated Knowledge of Basic Fundamental Information Was Essential, Useful, or Unnecessary for the Greenhouse Grower

Knowledge of Fundamental Information	Percent		
	Essential	Useful	Unnecessary
Basic plant parts (e.g. root and stem)	86	13	2
Understanding basic growth processes (e.g. photosynthesis, and transpiration)	75	21	4
Plant names (e.g. scientific and common)	66	27	7
Anatomical parts (e.g. xylem and phloem)	27	59	14

The second category of training, called competencies, included those abilities needed by the grower to perform the operations involved in his job. The percentages of managers who indicated that competencies were "essential", "useful", or "unnecessary" for the greenhouse grower are recorded in Table III. Fifty-four percent or more of the greenhouse managers indicated that the following competencies were essential for the greenhouse grower to possess, listed in order of importance: (1) watering, (2) controlling pests, (3) fertilizing, (4) mixing soils, (5) potting, (6) transplanting, (7) handling chemicals, (8) cleaning, (9) propagating, (10) sterilizing soil, (11) identifying growth containers, (12) applying growth substances, (13) operating boiler, (14) operating equipment, and (15) testing soil.

The third category of training considered was a grouping of various aspects of plant physiology, or what might be simply referred to as crop understanding. The percentage of managers who indicated that the training or crop understanding was essential, useful, or unnecessary is recorded in Table IV.

'able III. Percentage of Managers Who Classified Certain Competencies as Essential, Useful, or Unnecessary for the Greenhouse Grower

Competencies	Percentage of Managers Essential	Useful	Unnecessary
Watering	100	0	0
Identifying and controling insects, disease, virus, etc.	98	2	0
Fertilizing	96	2	2
Soil preparation	95	2	3
Potting	93	4	3
How to plant or transplant seedlings	93	0	7
Handling of chemicals	93	7	0
Maintaining sanitary conditions	93	7	0
How to propagate (seeds, cuttings, etc.)	89	7	4
Soil sterilization (steam, chemical, etc.)	89	7	4
Identifying and using growing containers	75	21	4
Using growth substances	66	21	13
Boiler operation	62	36	2
Equipment operation and maintenance	62	32	6
Soil testing	54	43	5

'able IV. Percentage of Managers Who Indicated Training in Crop Understandings was Essential, Useful, or Unnecessary for the Greenhouse Grower

Crop Understanding	Percentage of Managers Indicating Essential	Useful	Unnecessary
Temperature	100	0	0
Water requirements	100	0	0
Pinching	93	0	0
Disbudding	91	4	5
Cutting	88	4	8
Special cultural practices (staking, hardening, etc.)	88	9	3
Humidity	82	16	2
Life cycle of plant	82	13	5
Grading and packaging	75	18	7
Light effects	75	9	16

At least three-fourths of the greenhouse managers reported that the following areas of training under crop understanding were essential, listed in order of importance: (1) temperature, (2) water requirements, (3) pinching, (4) disbudding, (5) cutting, (6) special cultural practices, (7) humidity, (8) life cycle of plant, (9) grading and packaging, and (10) light effects.

The fourth category of training studied with the greenhouse managers was the types of management activities. The percentage of managers who indicated each aspect of greenhouse management training was either essential, useful, or unnecessary for the greenhouse grower is recorded in Table V.

Table V. Percentage of Managers Who Indicated Greenhouse Management Training was Essential, Useful, or Unnecessary for the Greenhouse Grower

Greenhouse Management	Percentage of Managers Indicating Essential	Useful	Unnecessary
Labor	71	21	8
Greenhouse Layout	71	23	6
Analysis of production	64	30	6
Marketing	41	41	18
Selling	36	46	18
Buying	36	50	14
Management of money (budgeting, financing, etc.)	30	54	16
Insurance	27	55	18

Under the "greenhouse management" category of training three categories: (1) knowledge of labor, (2) analysis of production, and (3) greenhouse layout, were indicated by 64 percent or more of the managers as essential for the greenhouse grower to understand. At least twenty-seven percent of the greenhouse managers stated that (1) understanding insurance, (2) managing money, (3) buying, (4) selling, and (5) marketing, were essential for the greenhouse grower. One must realize that

the competencies listed in Table V would be somewhat indicative of the size of the range and the policy of the management. The larger the establishment, the more specialized would be the individual's concern.

The last category of training to which managers were asked to react was the mechanical activities that growers perform. Twenty-three percent of the greenhouse managers said that skill in plumbing, woodworking, constructing (parts and types), wiring, and welding were essential, while 45 percent indicated that they were useful to know.

There were 152 family and 1,180 part-time or full-time, non-family employees engaged under the various job titles in the three metropolitan areas. The number of anticipated new family and non-family employees during 1964-69 was 162 and 1,358 respectively. The annual employment opportunities for greenhouse workers within the industry sample was 218.

The job title which was reported to offer the greatest opportunity for entry was the grower helper, and the job title which would offer the most opportunity for advancement was the grower. Advancement from grower helper to manager is possible within the industry.

The majority of managers expressed a desire for greenhouse work experience, and at least a high school education for their growers. One-fourth of the managers indicated that the grower should have two years of post-high school training. Forty-three and 59 percent of the managers indicated that it would be desirable for growers and grower helpers to have farm backgrounds, respectively. The salary range for greenhouse employees varied from $40. to $160. or more per week, with various kinds of fringe benefits for many. Forty percent or less of the employees in different job titles were reported to be members of a union.

Conclusions

1. Commercial greenhouses grew at least 59 different species of ornamental flowering plants which should be considered in developing a program of instruction for the greenhouse grower.
2. Geraniums, chrysanthemums, poinsettias, lilies, and azaleas were grown as a major crop in over half of the greenhouses surveyed, and should be considered when planning instruction for greenhouse growers. Amazon lilies, ivy, and primroses were grown only as a minor crop in two percent of the greenhouses, and therefore, might logically receive less emphasis in a course of instruction for the greenhouse grower.
3. Greenhouse managers wanted the greenhouse grower to have the following competencies: (a) basic plant knowledge including plant parts, growth processes, and plant names; (b) operational abilities including testing soil, operating equipment, operating boiler, applying growth substances, identifying growing container sterilizing soil, propagating, cleaning, handling chemicals, transplanting, potting, mixing soils, fertilizing, controlling pests, and watering; (c) crop understanding including light effects, grading and packaging, life cycle of plant, humidity, special cultural practices, cutting, disbudding, pinching, water requirements, and temperature; (d) greenhouse management included knowledge of labor, analysis of production, and greenhouse layout. Therefore, the above competencies should be considered in planning a program of instruction for greenhouse growers.
4. Greenhouse managers desired, but did not consider the following competencies essential for the greenhouse grower: (a) the areas of greenhouse management included understanding insurance, managing money, buying, selling, and marketing; (b) mechanical activities included welding, electrical, construction, woodwork, and plumbing.

5. There are employment opportunities for youth and adults to enter as a greenhouse grower helper in the greenhouse industry.
6. A greenhouse grower helper may advance to a greenhouse grower or a managerial position in the greenhouse industry.
7. Greenhouse managers desire at least a high school education and practical work experiences for their growers.

Factors Affecting the Work Performance of Licensed Practical Nurses. The League Exchange No. 65.

National League for Nursing, New York, N.Y. Dept. of Practical Nursing Programs

MF AVAILABLE IN VT-ERIC SET.

National League for Nursing, 10 Columbus Circle, New York, New York 10019 ($1.75).

Pub Date - 63 104p.

INDIVIDUAL CHARACTERISTICS; *PRACTICAL NURSES; *TASK PERFORMANCE; *PERFORMANCE FACTORS; ENVIRONMENTAL INFLUENCES; SOCIAL FACTORS; RELIGIOUS FACTORS; CULTURAL FACTORS; JOB SATISFACTION; STATUS; PHYSICAL ENVIRONMENT; INTERPROFESSIONAL RELATIONSHIP; PSYCHOLOGICAL NEEDS; FORCED CHOICE TECHNIQUE; *EMPLOYEE ATTITUDES; RATING SCALES; MASTERS THESES

The purpose of this study was to determine the opinions of selected licensed practical nurses concerning factors which affect their work performance. Seventy nurses who were graduates of one educational program, and were employed for the care of patients at one hospital, sorted 60 cards into five stacks containing factors: (1) eight which affected their work very much, (2) 14, quite a bit, (3) 16, average, (4) 14, very little, and (5) eight, hardly at all. These selections were arbitrarily weighted five, four, three, two, and one in that order. Analysis was made for the entire sample and for three subgroups based on length of experience, intelligence, and state board examination scores. The entire group indicated the rank order for the factors are (1) physical, (2) moral and religious, (3) social, (4) psychological, (5) job satisfaction, (6) work-relationship, (7) role-status, and (8) cultural. Those 20 with I.Q. scores of 110 and above ranked the factors: (1) moral and religious, (2) social, (3) psychological, (4) physical, (5) work-relationship, (6) job satisfaction, (7) cultural, and (8) role-status. Those 20 whose state board examination scores were above 600 ranked the factors: (1) moral and religious, (2) psychological, (3) social, (4) physical, (5) job satisfaction, (6) work-relationship, (7) cultural, and (8) role-status. One implication was that the test instrument could be used as a basic test for an inservice program for licensed practical nurses. This M.S. thesis was submitted to the Catholic University of America. (EM)

THE LEAGUE EXCHANGE

The League Exchange was instituted as one means for the sharing of ideas and opinions. Many other means are, of course, available--notably, biennial conventions, national and regional conferences, and meetings of state and local leagues for nursing. Further opportunities for the exchange of knowledge and information are afforded in Nursing Outlook, the official magazine of the National League for Nursing, and in other professional periodicals.

It is recognized, however, that the time available at meetings and the pages of professional magazines are limited. Meanwhile, the projects in which NLN members are engaged and which they should be sharing with others are increasing in number and scope. Many of them should be reported in detail; yet, such a reporting would frequently exceed the limits of other media of communication. The League Exchange has been instituted to provide a means for making available useful materials on nursing that would otherwise not be widely available.

It should be emphasized that the National League for Nursing is merely the distributor of materials selected for distribution through the League Exchange. The views expressed in League Exchange publications do not represent the official views of the organization. In fact, it is entirely possible that opposing opinions may be expressed in different articles in this series. Moreover, the League assumes responsibility for only minor editorial corrections.

It is hoped that NLN members will find the League Exchange useful in two ways: first, that they will derive benefit from the experience of others, as reported in this series, and second, that they will find it a stimulus to the dissemination of their own ideas and information. There are undoubtedly many useful reports which are as yet unwritten because of the lack of suitable publication media. NLN members are urged to write these reports and submit them for consideration for publication as a League Exchange item.

To the extent that all NLN members draw from, and contribute to, the well of nursing experience and knowledge, we will all move forward together toward our common goal--better nursing care for the public through the improvement of organized nursing services and education for nursing.

INTRODUCTION

The purpose of this study was to determine the opinions of selected licensed practical nurses concerning factors which affect their work performance.

The problem studied was, What are the opinions of selected licensed practical nurses concerning the factors which affect their work performance? Other problems studied were:

1. What is the degree to which selected licensed practical nurses perceive these factors as affecting their performance?

2. What factors do licensed practical nurses believe influence their performance the most?

3. What factors do licensed practical nurses believe influence their performance the least?

During the past decade, the demands of the public, the rapid advances in medicine, and the health needs of the nation have testified to one of the central concerns of the nursing world. The ever-increasing need for nursing personnel to staff expanding hospital facilities and the allied health agencies has broadened the field of nursing service far beyond its earlier scope.[1] Professional nursing organizations have recognized these rapidly emerging demands and have explored potential sources of more nurses and better ways of utilizing the present nurse supply. The increased needs of society have motivated professional nursing organizations to study practical nurses and promote better educational standards and state licensure for them.

Stevenson says:

> With all jurisdictions except the District of Columbia providing for the licensing of practical nurses, with about 200,000 licensed practical nurses; with more than 600 programs of practical nursing today, graduating about 15,000 practical nurses last year [1959], and with practical nurses being employed in a mounting number and increasing variety of nursing services, the evidence shows not only that the practical nurse is accepted on the nursing team, but that her usefulness, as well as the need for her services, is increasing.[2]

Recent studies show that it is becoming an accepted practice for the professional nurse to be satisfactorily assisted in the area of direct patient care by the nonprofessional practitioner.[3,4,5,6,7] The performance of the licensed practical nurse as one of the practitioners of nursing was the basic concern of this study. Though the need for the services of the licensed practical nurse has been recognized, her performance being considered valuable for quality patient care within circumscribed limits, the position of the practical nurse has not been clearly defined.[8,9] As a result, there appears to be a feeling of instability and insecurity in the role-status recognition of this nurse. Her role in the active nursing field appears to have potential for being a challenging and satisfying one, although studies indicate that this has

not always been the case.[10]

The increased demand for health services has produced two major effects in the area of nursing service:

1. Auxiliary personnel, including practical nurses, are more widely utilized for direct patient care.[11]

2. The chief responsibilities of professional registered nurses have gradually shifted from direct care to the duties of administration, including the direction of a team of nonprofessional personnel.[12]

Though the nurse's aide has been included in the category of auxiliary personnel, the practical nurse is prepared to make a greater contribution to direct patient care.

In order to perform to her fullest capacity, the licensed practical nurse should be educationally prepared for and psychologically accepted in her role. Even though the preparation of practical nurses has received attention from nursing education through programs of education and proposed curricular outlines,[13] it appears that the role-status features of this emerging group still lag. Keresey says:

> Another area of importance to the curriculum is brought out in the Alabama study. This is in relation to the role and status relationships of the practical nurse. There is considerable evidence that a great deal of work needs to be done in clarifying this area. Some of this should be included in the curriculum to help the practical nurse face the reality shock of employment but more needs to be done in helping the professional nurse and allied health professions in defining and understanding the role of the practical nurse.[14]

Since the nursing performance of the practical nurse takes place in the circumscribed area of direct patient care, often over a long period of time, the factors which affect this performance are of vital importance to the quality of care she gives and the satisfaction she receives. Also, it is to be expected that her experiences during this time of direct care and interrelated activities will in some manner influence her daily personal life away from the hospital.

DEFINITIONS OF TERMS

For purposes of clarity, the terms used in this study were defined as follows:

The trained hospital-employed licensed practical nurse.--One who was graduated from a state-approved school of practical nursing and who passed the state licensure examination. She was also currently employed in a hospital for the care of patients in a nursing unit. Hereafter, when the term practical nurse or LPN is used, it will refer to the licensed practical nurse as defined above.

Factors which affect the performance of the practical nurse. Those elements of her personality and of the work situation which influence the practical nurse's accomplishment of nursing functions so as to make the accomplishment more satisfactory

or less satisfactory.

Positive influence of selected factors upon work performance.--In all cases where the majority of the participants responded to the total number of items in the various categories in a greater than 40 percentage value, it was considered that they had definite influence, for good or for ill, upon the work performance of the licensed practical nurse.

Physical environmental factors.--Those factors which relate to the practical aspects of the art of "doing" in the area of daily-life activity performed for a constructive purpose according to a planned procedure and with a marked degree of manual dexterity.

Social environmental factors.--Those factors which originate in the social nature of the performer herself whereby an understanding and respect for herself as a person becomes the basis for understanding other persons.

Psychological environmental factors.--Those factors which reside within the personality structure of the performer herself in the form of needs, such as the need for safety, security, and a sense of belonging, the need to grow in self-realization, the need to plan, to be creative, and to make a worthy contribution, and the need to be able to participate in a social structure.

Moral and religious environmental factors.--Those factors which arise from the basic philosophy of Judaic-Christian religion so as to inspire the motives, ideals, and goals of the performer.

Cultural environmental factors.--Those factors which arise from an aesthetic appreciation for the arts so as to enable the performer to help patients through broader areas of personal interests, beliefs, habits, and practices.

Work-relationship factors.--Those factors which arise from the work situation and the coordinated efforts of all members of the health team.

Role-status factors.--Those factors which arise from a specific job within a complex nursing-staff structure composed of various levels of performers.

Job-satisfaction factors.--Those factors which offer the performer tangible and intangible remuneration for services rendered to the sick in a hospital setting.

Personality.--An integrated totality of the physical, psychological, and mental capacities, dispositions, traits, habits, and mannerisms that distinguish one human being from another and determine his unique reactions to himself and his adjustment to his environment.[15] Personality is a dynamic, constantly changing phenomenon emerging out of the myriad relations between the individual and the environment, changing and adjusting in response to demands from within and from without.[16]

ASSUMPTIONS AND HYPOTHESES

The assumptions basic to this study were:

1. The individual possesses within herself a capacity for self-determination which enables her to choose, to determine, and to chart her own conduct and destiny.[17]

2. Every licensed practical nurse who is employed in a hospital desires to accomplish some degree of satisfactory performance.

The following hypotheses were formulated for this study. In the opinion of a selected group of licensed practical nurses:

1. Their work performance is positively influenced by the physical environmental factors.

2. Their work performance is positively influenced by the social environmental factors.

3. Their work performance is positively influenced by the moral and religious environmental factors.

4. Their work performance is positively influenced by the cultural environmental factors.

5. Their work performance is positively influenced by the psychological environmental factors.

6. Their work performance is positively influenced by the relationship factors of the work situation.

7. Their work performance is positively influenced by the role-status factors of the work situation.

8. Their work performance is positively influenced by the job satisfactions resulting from the work situation.

CHAPTER I

METHOD AND DESIGN OF THE STUDY

The descriptive method of research was used to accomplish the purpose of this study--namely, to determine the opinions of selected licensed practical nurses concerning factors which affect their work performance. Good and Scates have said that "for constructive thinking about practical affairs, knowledge of the existing situation is essential."[1] When we know where we are at the present time and where we wish to be in the future, we then can be concerned with a method for getting there. Such knowledge is gained mainly from studies which deal with causation.[2] Descriptive studies contribute to science by providing penetrating insights into the nature of what one is dealing with in a particular situation. The purpose of this research was to find new truth, which may have many different forms. One of these may be an insight into factors which affect the work performance of practical nurses. Solutions to perplexing practical questions will not be solved by the data but by the thinking process which will be stimulated by the increased insight which grows out of a study of data.[3]

All of the licensed practical nurses who participated in this study were graduates of the same educational program, and the philosophy and the objectives of this school were reviewed because they appeared to be closely related to the factors affecting the performance of the LPN as determined from the literature.[4]

The factors affecting the performance of the licensed practical nurse appeared to arise from the performer's personality structure and the environmental factors of the work situation, and therefore, a format for the categorization of personality and environmental factors was set up according to Schneiders' principles of human adjustment.[5]

The nursing literature was reviewed for the historical background of practical nursing in this country and for a determination of the factors which appeared to affect the performance of the licensed practical nurse as described in these sources.[6]

The factors determined from Schneiders' principles of human adjustment and from the nursing literature were categorized according to personality and environmental factors.[7] The categories utilized were as follows:

1. Personality factors, which included physical, social, moral and religious, cultural, and psychological factors.

2. The work-situation factors, which included work-relationship, role-status, and job-satisfaction factors.

The construction of a questionnaire for an evaluation of the determined factors was then undertaken. This consisted in the formulation of statements based on the categorized factors. The following criteria were utilized in the development of the statements:

1. The statement should be derived from the personality-environmental principles described by Schneiders and from the factors determined from nursing literature.

2. The statement should be an expression of desired behavior--not a statement of fact. "A very convenient way of stating a proposition so that it does involve desired behavior is by using the term 'should.' "[8]

3. The statement should be worded so that the modal reaction to it would be approximately in the middle of the possible responses.[9]

4. In order to avoid a stereotyped response, the statements should be so worded that half of the responses would fall in one direction and half in the opposite direction.[10]

A questionnaire composed of 74 statements was developed,[11] utilizing the factors and placing them so that the respondents could check Strongly Agree, Agree, Undecided, Disagree, or Strongly Disagree. The questionnaire was then presented to a group of consultants, instructors, and supervisors who had previous or current experience with practical nurses in the work situation or in practical nurse education.[12] They were asked to critically evaluate the questionnaire for format, clarity, and importance of items and to write in any suggested revisions of the item. The results of this critical analysis were evaluated as follows:

1. What questions, if any, were raised by each statement?

2. What statements received the most consistent response?

3. What statements received the most varied response?

From the results of this evaluation, many items were revised for purposes of clarity. Those items which received broadly different responses, so that they were not strongly weighted in agreement or disagreement, and those which resulted in several undecided responses were either restated or rejected. Fourteen items were rejected. The statements regarding role-status were not strongly supported by the consulting group, but since the literature suggested that these factors were pertinent, they were retained.

After the evaluation of the statements, the tool for securing the opinions of a selected group of licensed practical nurses was further developed. The purpose of this tool was to determine the opinions of the licensed practical nurses regarding the degree to which they perceived the factors affecting their personal performance. Criteria for the selection of the 60 items in the revised instrument differed from the previously stated criteria and were as follows:

1. Each item originated in the categorization of factors affecting human adjustment as described by Schneiders.

2. Each item was identified with a particular factor determined from nursing literature.

3. Each item was strongly supported as being a factor in practical nurse performance in the questionnaire submitted to a group of registered professional nurses who had previous experience in the instruction and/or supervision of practical nursing students.

4. Each item was presented as a positive statement.

5. Each item tested the degree to which the practical nurse perceived it as affecting her personal performance by judging it in the light of the question "How much would this situation affect my care of patients?"

Since the majority of the 60 items were positive and might have either a direct or an indirect effect on performance, the decision was made to use a forced-distribution-response type of questionnaire. Using this method, each participant would be given a pack of 60 cards, each listing one statement, and directed to sort them into packs of Very Much, Much, Average, Very Little, or Hardly at All, depending upon her opinion of how the statement affected her work performance. The decision was also made to force the participants to separate the cards into 8 which affected their work very much, 14 which affected their work quite a bit, 16 which could be considered average in effect, 14 which had very little effect, and 8 which affected their work hardly at all. By using this method, the participants would be forced to place a specific number of items in each of the five categories.

A pilot study was conducted in order to test the items, the method of procedure, and the facility of the researcher in administering the instrument. Ten practical nurses currently employed in a local hospital participated in the pilot study. Specific instructions were given to these participants.[13] There was no change in the items or in the administrative procedure as a result of the pilot study. The instrument was understandable and the instructions were adequate, and the decision was made that the instrument was adequate to test the selected sample of licensed practical nurses.

The director of nursing of a large Catholic general hospital in the Midwest had been contacted for permission to conduct the study. This hospital was selected for two reasons: because of the large number of licensed practical nurses employed on the staff and because these practical nurses had graduated from the preservice program conducted by this hospital. There were approximately 150 licensed practical nurses employed in the selected hospital. Permission to carry out the study was granted.

Criteria for the selection of the participants in this study were that they be:

1. Graduates of the same educational program.

2. Currently employed in the same hospital.

3. Employed for the care of patients.

Approximately 120 licensed practical nurses met the above criteria. It was not, however, possible to secure a controlled random sample of the 120 eligible practical nurses employed in the selected hospital, because the testing period was limited to a

day and a half. Those nurses who were available during the designated testing period comprised the sample, which was considered to be fairly random.

It was hoped that a majority of the licensed practical nurses who met the criteria could participate in the study. Seventy-five graduates, 63 percent of the eligible group of practical nurses, participated in this study. Five of the sortings were incorrect and had to be discarded, which left a total of 70 participants for whom the data could be analyzed. Previous to the administration of the test, it had been hoped that 10 percent of the total graduates of the selected school of practical nursing would be represented in this study. The total number of graduates was 658, and 11.4 percent participated in the study.

Previous arrangements with the department of nursing made it possible for the practical nurses to report hourly for instructions and then proceed with the test. The test was conducted in a large room with ample table space for each participant to work without crowding or interruption.

The participants appeared to be interested and worked diligently for approximately one hour. Two general comments were made by the participants when they had completed the test. The first was that it was interesting and good because it made them think more seriously about why they did their work. The second comment concerned the distress they had felt at having to make a decision about so many items which were so closely related. They wanted the researcher to realize that though they had put the required number in the Very Little and Hardly at All sections, they did not mean that the items were not significant.

The data from the forced-distribution-response test were handled according to the eight categories of factors--namely, physical, social, moral and religious, cultural, psychological, work-relationship, role-status, and job-satisfaction factors. The responses were arbitrarily weighted in the following manner: A value of 5 was given to those items checked Very Much, 4 to those checked Much, 3 to those checked Average, 2 to those checked Very Little, and 1 to those checked Hardly at All.

All of the scores were handled on a group basis rather than individually, so that total scores were obtained for all participants within each category. The weighted scores for the 70 participants were then obtained for each item according to each category and totaled to arrive at one group score for each item and each category. This sum was divided by the possible number of responses for each category, which resulted in a mean value for each category. Obtaining a mean value made it possible to rank the various categories of factors according to the importance of their effect on work performance in the opinion of the participants.

After these computations had been completed, the data were analyzed to test the previously stated hypotheses. After the testing of the hypotheses, further study was done to compare the opinions of three subgroups within the total group regarding the effect of the stated factors upon work performance. These three subgroups were made up of:

1. Twelve licensed practical nurses who had worked on the nursing staff for three to seven years.

2. Twenty licensed practical nurses with an IQ of 110 or more.

3. Twenty licensed practical nurses who had achieved a total score of 600 or over on the State Board Licensure Examination.

These data were tested in the same way as previously described for the total group analysis.

CHAPTER II

PRESENTATION AND INTERPRETATION OF THE DATA

The collection of data was made by personal visit to a large midwestern Catholic general hospital located in an active medical center. The selected school of practical nursing is located in a state in which some practical nursing programs come under the State Department of Education and in which the State Board of Nursing is responsible for the accreditation of all programs within the state.[1] The particular school used for this study was a hospital school of practical nursing accredited by the State Board of Nursing.

DESCRIPTION OF PARTICIPANTS

The number of graduates of the selected school of practical nursing and the number of those who participated in the study are presented in Figure 1.

Figure 1. Number of Graduates of Selected School and Number of Graduates Utilized in Study, According to Year of Graduation

The enrollment of the school increased each year during the 14 years of its existence until 1961, at which time it was decided to limit the number of students admitted to the program. The 70 participants in this study came from all but five of the classes; however, the majority, 42, graduated in the 1961 and 1962 classes.

The age level of the participants is presented in Figure 2.

Figure 2. Age Level of Participants

The ages of all but two of the participants ranged from 19 to 27 years; one was 42 and one was 46 years of age. The majority of the group were between the ages of 20 and 21. Twenty-one percent of the participants were 19 years old, 51 percent were 20 or 21 years old, and 24 percent ranged from 22 to 27 years. The participants in this group were younger than those reported in other studies, but they did fall within the geographical age-trend pointed out by West and Crowther.[2] In Michigan, the average age of practical nursing students was 30;[3] in five southern states, the average age of the LPN was 43;[4] and in California, the age range for graduates was from 34 to 49.[5]

The length of employment of the participants in the selected hospital is presented in Figure 3.

The majority of the participants had been employed in the selected hospital for one year or longer, almost one-third had been employed for less than six months, and slightly more than one-third had been employed for two years or longer.

Figure 3. Length of Employment of Participants in the Selected Hospital

The IQ scores of the 70 participants in this study ranged from 88 to 128, as tested by the Otis Test of Mental Ability. The group mean was 103.14. The distribution of the scores for the 70 participants is presented in Figure 4.

Figure 4. The IQ Scores of Participants

There was a range of 40 points between the highest and the lowest IQ scores (88 to 128). A slight majority of the scores fell at 100 or less; however, one-third were between 105 and 110, and one-tenth were above 115.

The State Board Licensure Examination scores for the participants ranged from 394 to 711, with a group mean of 564. The state minimum requirement was 375. The distribution of the scores for 67 of the participants is presented in Figure 5.

Figure 5. State Board Examination Scores of Participants*

*Three of the 70 participants are not included because during the first years of the existence of the program, the state gave only a licensing number or scored according to another method.

All of the state board scores of the participants were above the state requirement of 375. Nineteen percent of the participants' scores fell between 375 and 500, 48 percent fell between 500 and 600, and 33 percent were 600 and above.

Other records of the participating group showed that the majority of the participants, 53, were single and that 17, or 24 percent, were married. The majority of the group, 70 percent, were Catholic, and the remainder were members of Protestant faiths.

THE PARTICIPANTS' RESPONSES

In the analysis of the data, each participant's responses were analyzed and compiled in a table representing the group response for each item.[6] The weighted calculations for each factor were mathematically determined as described in Chapter I. The mean value and the percentage value were then determined. They are presented in Table 1.

Table 1. The Weighted Mean and Percentage Values Given to Performance Factors by Participants

Factors	Mean Value	Percentage Value
Physical	3.65	73
Moral and Religious	3.48	69.6
Social	3.39	67.8
Psychological	3.31	66.2
Job-Satisfaction	2.87	57.4
Work-Relationship	2.65	53
Role-Status	1.99	39.8
Cultural	1.97	39.4

In the opinion of the selected group of licensed practical nurses, the physical factors had the greatest effect on their work performance. The moral and religious factors were rated the next highest, and the cultural factors were considered the least important. Work-relationship and role-status factors, which appeared to be highly significant according to nursing literature, had less effect upon their work than five of the other categories had.

In testing the hypotheses according to these findings, it was found that the data supported the following assumptions.

In the opinion of selected licensed practical nurses, their work performance is positively influenced by:

1. Physical environmental factors.

2. Social environmental factors.

3. Moral and religious environmental factors.

4. Psychological environmental factors.

5. Relationship factors of the work situation.

6. Job satisfactions resulting from the work situation.

The data did not support two other sets of factors which had also been hypothesized in this study. In the opinion of the selected group of licensed practical nurses, their performance is not positively influenced by:

1. Role-status factors in the work situation.

2. Cultural environmental factors.

ANALYSIS OF PARTICIPANTS' OPINIONS

When the items which comprised the different sets of factors were examined, it was noted that a strong group response was given to some of the items. In order to study these better, the following method was used: For each item, the Very Much and the Much responses were totaled. These were compared with the totaled Very Little and Hardly at All responses to the same item. The Average responses were disregarded in an effort to evaluate better the extremes of the responses to each item. The results of this investigation are presented in the following tables set up for each group of factors. Each table is preceded by a summary statement about the factors from the literature and is followed by an interpretative comment. It should be kept in mind that the participants were required to categorize a given number of items as Very Little or Hardly at All and that these items were not considered unimportant but were seen as having less effect on the work of the practical nurse than the other items had.

The Physical Environmental Factors

The performance expectations of the practical nurse were centered in the art and skills of nursing. They related closely to daily living activities that were compatible with those of a homemaker. Ideally, the practical nurse is motivated by a constructive interest in and an optimistic attitude toward performance. The responses of the participants to the items in the category Physical Factors are presented in Table 2. (Since a high degree of manual and manipulative skill enters into the performance of the LPN, the writer was surprised at the low positive response given to Item 2. It is possible that the participants might have viewed this as a catch question which would mark them as being more concerned about procedures and tasks than about the needs of each patient.)

The majority of the participants indicated that they liked to plan their work in an orderly way, liked to see improvement in the work area, and considered that rest and proper diet influenced their working ability. The majority of the group did not think that planning to do things at home or with a group affected their work in the hospital very much, and almost one-third indicated that liking to do things that required the use of their hands had little effect on their work as practical nurses.

Table 2. Responses to Items Concerning Physical Factors

Item	Number of Responses*	
	Very Much and Much	Very Little and Hardly at All
1. I work in an orderly, planned way.	40	6
2. I like to do things that require the use of my hands.	13	36
3. I like to see things improve in the area in which I work and care for patients.	50	5
4. Rest, proper food, and general good health influence my working ability.	41	5
5. I like to plan things to do at home or with a group.	5	51

*All 70 participants responded to each item in the questionnaire, but as noted on page 16, the Average responses were disregarded and so are not included in tables 2-9.

The Social Environmental Factors

The basic roots for ministering to the sick stem from the performer's own person. They are enhanced by the feminine qualities of understanding, patience, and compassion. These abilities and capacities should have been trained, refined, and perfected by a good general and preservice nursing education. In the process of giving to others, she herself should have developed personally as well. The selected group expressed their opinions regarding these concepts, and they are presented in Table 3.

In summarizing the social factors, it was noted that the majority of practical nurses liked people, had a strong sense of concern for those in need, and used personal qualities to enrich the effectiveness of nursing skills. Educationally, they placed special value on their practical nursing education; they learned much from their instructors, their supervisors, and other good nurses; and they rated general education as less influential in its direct effect on performance. Though evaluations of performance were not rated very high, they do appear to have an influence on performance. A majority of practical nurses indicated that they were not influenced by an ideal example.

Table 3. Responses to Items Concerning Social Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
6. I like people.	49	4
7. I like to be with people.	48	3
8. I am concerned and want to be helpful when I see people who are hurt or in trouble.	38	2
9. I want to make difficult situations easier for people whenever I am able to do so.	36	15
10. I show my sympathy for people best by doing things which will help them.	38	10
11. I know an ideal woman and nurse whose example I try to follow.	10	46
12. My grade school and high school education has contributed toward my understanding of people.	6	40
13. My practical nurse education has helped me learn the "how" and the "why" of care for patients.	47	1
14. I use my personal qualities of understanding, patience, compassion, etc., to add to my nursing skills.	40	6
15. My instructors and supervisors helped me develop nursing skills.	37	9
16. I increased my skill in giving direct care to patients by working with good nurses.	34	7
17. Evaluations of my work as a student and as a graduate helped me learn more about myself as a practical nurse.	21	23

The Moral and Religious Environmental Factors

According to the literature, it can be said that the genuine concern of the practical nurse in the care of the sick stems from basic convictions which have a basis in the Judaic-Christian moral and religious values. A proper, wholesome respect for herself radiates in a genuine love and respect for others. Her ultimate goal is directed toward a provident God, and this same belief is respected in others even when there is a difference in formal expression. She recognizes and promotes a self-determining capacity in her own life as well as in that of each patient. The opinions of this group of practical nurses regarding this category are presented in Table 4.

Table 4. Responses to Items Concerning Moral and Religious Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
18. My religious beliefs and teachings help me want to give good care to patients.	33	11
19. Religious and moral values help me appreciate and respect the dignity of each patient.	51	4
20. Religious and moral values help me respect each patient's own way of life.	39	10
21. For me, giving care to patients is also giving honor and worship to God, the Creator of mankind.	47	6
22. Giving care to patients is also a chance for me to give charity to my neighbor.	19	26
23. Giving care to patients has helped me to become a better person myself.	21	14

A strong majority placed a high value on most of the moral and religious factors. Seventy-three percent of the participants indicated that their religious and moral values helped them appreciate and respect the dignity of each patient. Sixty-seven percent looked upon their care of the sick as an expression of worship of God, their Creator. About one-half of the participants said that their religious beliefs influenced their desire to give good care, and one-fourth said that care of the sick was also charity to others and a means for making them better people themselves. (The writer is of the opinion

that the word "neighbor" in Item 22 perhaps did not carry the proper implication to the participants, so that they did not think of the patient as a neighbor.)

The Cultural Environmental Factors

In the cultural patterns of all people, it can be observed that the various cultures have adopted traditional expressions of their way of life. These take the form of music, art, literature, and recreation. Though nursing literature does not indicate a significant use of the arts in the administration of general nursing care, there is some use of it in the specialties. Table 5 shows the opinions of the selected group of practical nurses in regard to the cultural factors.

Table 5. Responses to Items Concerning Cultural Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
24. My appreciation for artistic design helps me work in a patient's room in a calm, smooth, and easy manner of giving care.	5	57
25. An appreciation for good music has helped me find programs which interest and benefit patients.	1	64
26. My appreciation for good reading has helped me in my conversation with patients.	7	42
27. My interest in recreation and hobbies has helped me see ways for patients to be rehabilitated and make progress in helping themselves.	5	50

As a whole, the cultural factors had very little effect on the performance of the practical nurse in the opinion of the selected group. The great majority did not think that art, music, literature, and a personal interest in recreation or hobbies made a contribution toward their work performance in the care of patients.

The Psychological Environmental Factors

In considering the nature of the practical nurse as a performer, it is important to remember that she has basic needs which seek to be fulfilled and in this respect have

Table 6. Responses to Items Concerning Psychological Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
28. My work situation as a practical nurse improves my planning and organization of other activities in my daily life.	6	47
29. Trying to be a good practical nurse fits in with trying to be a good person.	27	14
30. Being assigned to duties which I have been taught to do helps me feel safe and secure.	33	10
31. Patients in rehabilitation need almost the same care over a long period of time, but it is important for me to see each day as a new one in their lives.	18	25
32. Since the RN is responsible for understanding the scientific problems of illness, I can concentrate primarily on patient care.	11	38
33. I am pleased when I see patients whom I have cared for recover their strength and health.	60	..
34. Even though my assignments are made out for me, I can still plan many of the things I do for patients.	23	19
35. I know that I belong to a nursing staff which is helpful to humanity.	33	8
36. I have a better relationship for the total care of the patient when I have been given background information about him and his needs.	49	2
37. I am permitted to attend the daily nursing reports concerning the patients I have given care to.	40	13
38. I am permitted to participate in reports about patients I give care to.	35	17
39. The nursing staff on the unit make me feel that my work as an LPN is helpful and needed.	43	8

some effect on performance. These basic needs are closely identified with the basic needs of the patient, and in many instances, the satisfaction of the one is also the satisfaction of the other. Some of these psychological needs of the patient and the practical nurse are: the need for a purpose and an aim, the need to belong, to be recognized, to achieve, and to be safe, as well as the need to participate and make a contribution. It is also important that the nurse be able to see variations in the day-to-day situation. The opinions of this group of practical nurses are shown in Table 6.

The strongest group opinion was expressed in this category in response to the item pertaining to personal satisfaction arising from the sense of achievement with the recovery of health for the patient; 86 percent gave Very Much or Much responses, and the rest gave Average responses. Thirty-nine percent said that being a good practical nurse touched on their efforts to be a good person. Forty-one percent indicated that assignments based on previous teaching gave their performance a sense of safety and security. The three items relating to the need for information about the patient received a consistent significant response ranging from 50 to 70 percent. Two items related to a sense of belonging also received consistent responses concerning value to them. The item concerning planning and daily activities was rated low in value, as it was in the category Physical Factors. (Item 39 may seem to be more directly related to work relationships, but in the light of the definition used in this study for psychological factors, the intent was to place emphasis on a sense of security and belonging within the personality structure of the performer herself.)

The Work-Relationship Factors

Nursing literature shows the vital relationship contacts which exist in the work area for the practical nurse. These contacts include the patient, the physician, co-workers, nursing administrators, and all other personnel. Such contacts have a strong effect on those aspects of performance which make for the coordination of one performer's activities with those of the others. These include acceptance of the individual, co-operation, and the utilization of the skills in the proper area of performance. Attitudes in this regard are most frequently reflected in the kind of assignments given to the individual. The opinions of the participants in this study regarding work relationships are presented in Table 7.

The work-relationship responses indicate that this group of practical nurses want to be informed about patient needs. There was a strong response in this regard, which was consistent with their responses to similar items among the psychological factors. The kind of assignment appeared to have less significance than the need for sufficient information about the assignment. Job descriptions were given a lower rating, as was the assignment to cleaning duties. This, too, supported their unconcern about the kind of duty. About one-fourth indicated a slight influence resulting from a proper understanding of the practical nurse's position in nursing. All of these responses except the first were contrary to needs expressed in nursing literature as well as in studies regarding work relationships.[7, 8] (Items 41, 42, and 43 might have been answered very differently by these same participants had the testing been done after they had been employed in other hospitals throughout the country. Most of them are familiar only with the practices in their school hospital. Here, in general, they are well accepted by RNs, their job responsibilities are well described, and they are utilized to the full capacity of their role as LPNs. Therefore, they are not familiar with the wide variety of employment practices for LPNs.)

Table 7. Responses to Items Concerning Work-Relationship Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
40. I am given information about the patient and his needs before I begin his care.	51	7
41. I am expected to handle any assignment which is given me by the RN.	20	39
42. A description of my job helps me know what is expected of me.	7	37
43. It bothers me when the assignments I get seem to indicate that I cannot do the work an LPN usually does.	10	40
44. Very often I am assigned to cleaning duties on the nursing unit rather than the care of patients.	2	64
45. When the RN understands what nursing duties I can do as an LPN, we understand each other better.	19	25
46. When I am understood better as an LPN, my assignments are usually more of the nursing duties I am prepared to perform.	18	37

The Role-Status Environmental Factors

Nursing literature about the practical nurse is extremely concerned with the fact that the role-status of her position is poorly defined and generally not well recognized by nursing administrators, physicians, co-workers, and the public at large. The role-status problems appear to arise from a poorly defined role in nursing itself rather than from resentment toward the practical nurse as a person or from the practical nurse's own dissatisfaction with her role. The opinions of the participants in this study regarding this issue are presented in Table 8.

Table 8. Responses to Items Concerning Role-Status Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
47. Patients do not seem to know the difference between the RN and the LPN in nursing.	5	56
48. Patients frequently ask me when I am going to finish nursing and become an RN.	5	54
49. The doctor does not seem to know what the LPN can do, because he often asks me to do things for which I am not prepared.	8	51
50. Often, when there is a shortage of RNs, I am asked to do RN duties--the next day, when there is no shortage, I do LPN duties.	6	55
51. The LPN seems to have less status in hospitals because other personnel do not know her position in nursing.	4	54

The role-status factors appeared to have little effect on the performance of these practical nurses. The Very Little and Hardly at All responses ranged from 73 to 80 percent. This is contrary to what is indicated in the literature. In the California study, one-third of the participants indicated that their greatest problem related to their role as licensed vocational nurses.[9] Other studies support these role-status problems as well.[10, 11, 12] It is also to be noted that these were the same items which did not receive strong support in the evaluation study but were retained because they appeared to be significant in nursing literature.

The Job-Satisfaction Factors

Job-satisfaction factors range all the way from the need to work for a salary to that of achieving a full development of one's self-realization. Many of the rewards of work are intangible, and frequently these take on greater importance to the performer than the tangible rewards. The opinions of the selected group of practical nurses are presented in Table 9.

Sixty to 70 percent of the responses indicated that the practical nurse received great satisfaction from the fact that her position enabled her to give direct care to

Table 9. Responses to Items Concerning Job-Satisfaction Factors

Item	Number of Responses	
	Very Much and Much	Very Little and Hardly at All
52. The LPN position enables me to stay close to the patient and give care at the bedside.	41	8
53. Because the LPN's position is primarily at the bedside, I get great satisfaction from giving care to individual patients.	48	9
54. Even though the LPN's position does not offer advancement in nursing, I find it interesting work because of the patients and their needs.	21	27
55. I like to feel that I am being paid an adequate salary for the important work I do.	5	48
56. I am not able to do my work so well because my work hours are changed so often that I am seldom sure of a week's schedule.	3	64
57. When the hours I work can be integrated with my home responsibilities and preferences, I can do better work.	16	50
58. I learn about adjusting to sickness from observing many of the patients I take care of in the hospital.	23	25
59. I do a better job when I work with friendly, cooperative co-workers.	42	7
60. I am a better LPN when I work in a hospital which accepts me as a contributing member.	27	19

patients and this had a great effect on her performance. Friendly, cooperative co-workers also affected her performance because of a strong satisfaction factor. Somewhat consistent with the responses in the category Psychological Factors is that she was affected by the hospital's acceptance of her as a contributing member of the staff,

but the need to be accepted by her immediate co-workers was rated even higher among the psychological factors. The practical nurses did not indicate concern about frequent change in working hours, and a rather slight number were affected by consideration of preferences regarding work hours. Of the 16 LPNs who were affected by this item, half were married. An unsolicited response was made in writing on the item regarding advancement in a more-or-less terminal position. The participant said, "This is untrue. We learn more each day. Our education is never through." This supported the literature, which suggested that personal growth and development was important to the performer and was often more satisfying than salary and position status. In other words, work satisfaction is closely related to self-actualization.

Summarizing the opinions of the participants as expressed in their group responses concerning the factors which had been determined as having an effect on the work performance of practical nurses, it can be said that the factors did have a positive influence. The physical factors were rated as having the most effect. The cultural factors were shown to have the least effect, and that a very slight effect, on performance.

Table 10. Comparison of Values Given to Performance Factors by 12 Practical Nurses Employed 3 to 7 Years with Values Given by Total Group

Factors	Percentage		
	The 12 LPNs' Value	The Entire Group's Value	Difference
Physical	61.2	73	- 11.8
Social	66	67.8	- 1.8
Moral and Religious	69.6	69.6	0.0
Cultural	40	39.4	+ .6
Psychological	67.6	66.2	+ 1.6
Work-Relationship	54.6	53	+ 1.6
Role-Status	42.6	39.8	+ 1.8
Job-Satisfaction	56.8	57.4	- .6

When the data concerning the total group of practical nurse participants were completed, three studies were carried out with subgroups for purposes of comparison. The first was a study of those responses made by 12 participants who had been employed on the nursing staff as licensed practical nurses for three to seven years. The responses of this group were analyzed according to the same method that was used for the total group. Table 10 shows the relationship of their scores to those of the total group of participants.

The 12 practical nurses who had been employed for three to seven years rated the eight factors differently than the other participants did. Role-status, work-relationship, psychological, and cultural factors were considered to have slightly more of an effect on their work performance. The social and the job-satisfaction factors had slightly less effect, and the physical factors had considerably less effect.

The second comparison was made between the responses of the practical nurses in the group with IQ scores of 110 and above and the responses of the total group. Twenty practical nurse participants with IQs of 110 and over were included in the group. The relationship of their scores to those of the entire group is presented in Table 11.

Table 11. Comparison of Values Given to Performance Factors by 20 Practical Nurses with IQ Scores of 110 and Over with Values Given by Total Group

Factors	Percentage		
	The 20 LPNs' Value	The Entire Group's Value	Difference
Physical	63.6	73	- 9.4
Social	69	67.8	+ 1.2
Moral and Religious	71	69.6	+ 1.4
Cultural	42.4	39.4	+ 3.0
Psychological	67.4	66.2	+ 0.8
Work-Relationship	55.8	53	+ 2.8
Role-Status	38.2	39.8	- 1.6
Job-Satisfaction	54.2	57.4	- 3.2

The 20 practical nurses who had IQ scores of 110 and above also differed in opinion from the other participants in the group in several respects. They considered the physical factors of considerably less importance in their work performance. Role-status and job-satisfaction factors were considered less important as well. They gave more value to the cultural factors and slightly more value to the social, the moral and religious, the psychological, and the work-relationship factors.

The third comparison was made using those participants who had scored 600 or above on the State Board Licensing Examination. Their percentage values and their difference from the total group opinion are shown in Table 12.

Table 12. Comparison of Values Given to Performance Factors by 20 Practical Nurses with State Board Examination Scores of 600 and Above with Values Given by Total Group

Factors	Percentage		
	The 20 LPNs' Value	The Entire Group's Value	Difference
Physical	64.6	73	- 8.4
Social	66.6	67.8	- 1.2
Moral and Religious	73	69.6	+ 3.4
Cultural	39	39.4	- 0.4
Psychological	67.4	66.2	+ 1.2
Work-Relationship	52.6	53	- 0.4
Role-Status	37.8	39.8	- 2.0
Job-Satisfaction	54.2	57.4	- 3.2

The 20 practical nurses who scored 600 and above in the State Board Examination for licensure varied from the other participants with regard to two sets of factors. They considered the physical factors to have less effect and the moral and religious factors to have a greater effect on work performance in practical nursing. They also considered role-status and work-relationship factors to be slightly less important.

In summary, it was noted that the participants in the three subgroups placed the moral and religious factors higher than the physical factors with regard to the

importance of their effect on work performance. The ratings ranged from 3 percent to 3.4 percent higher. The participants who had been employed longer and those who ranked highest in IQ scores also differed from the other participants in placing more importance on work-relationship and role-status factors. The 20 practical nurses who had the highest IQ scores gave a higher value to the cultural factors than the other participants gave.

CHAPTER III

SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

The purpose of this study was to determine the opinions of selected licensed practical nurses concerning factors which affect their work performance. The factors were determined from the literature and then evaluated by a group of consultants, instructors, and supervisors in practical nursing. In the form of a forced-distribution-response instrument, 60 items based on these factors were presented to a group of 70 licensed practical nurses who had graduated from the same educational program and were employed in one selected hospital for the care of patients. The data were analyzed to test the hypothesis that the work performance of selected licensed practical nurses would be positively affected by the eight specific factors.

The instrument was developed so that the participants could respond to the items in the eight categories by sorting them into groups of Very Much, Much, Average, Very Little, and Hardly at All. The responses were weighted, so that mathematical computations could be determined. The amount of effect the selected factors exerted on work performance in the opinion of the selected group of licensed practical nurses is shown in Table 13.

Table 13. The Percentage Values Given to Performance Factors by 70 Licensed Practical Nurses

Factors	Percentage Values
Physical	73
Moral and Religious	69.6
Social	67.8
Psychological	66.2
Satisfaction	57.4
Work-Relationship	53
Role-Status	39.8
Cultural	39.4

The data supported the following hypotheses:

1. Their work performance is positively influenced by physical environmental factors.

2. Their work performance is positively influenced by social environmental factors.

3. Their work performance is positively influenced by moral and religious environmental factors.

4. Their work performance is positively influenced by psychological environmental factors.

5. Their work performance is positively influenced by the relationship factors of the work situation.

6. Their work performance is positively influenced by job satisfactions resulting from the work situation.

The data supported the rejection of the following hypotheses:

1. Their work performance is positively influenced by the role-status factors of the work situation.

2. Their work performance is positively influenced by the cultural environmental factors.

The conclusions basic to this study were:

1. The 70 participants indicated that the following factors positively influenced their work performance.

   a. The physical factors, considered to exert the greatest effect upon performance.

   b. The social factors.

   c. The moral and religious factors.

   d. The psychological factors.

   e. The job-satisfaction factors.

   f. The work-relationship factors.

2. The 70 participants indicated that the following factors had a limited effect upon their work performance.

   a. The role-status factors.

   b. The cultural factors, considered to have the least effect upon their performance.

3. The practical nurses in the three subgroups in this study differed from the other participants concerning factors which positively affected their work performance as follows:

a. The practical nurses who had been employed the longest (three to seven years) considered the moral and religious, the role-status, and the work-relationship factors to be more important.

b. The practical nurses with IQ scores of 110 or above considered the moral and religious, the cultural, and the role-status factors to be more important.

c. The practical nurses with state board examination scores of 600 and above considered the moral and religious factors to be of greater importance and the physical factors to be less important.

In the opinion of the 70 participants, the physical factors had the greatest effect on their work performance. The moral and religious factors were rated the next highest, and the cultural factors were considered to have the least effect. Work-relationship and role-status factors which were considered important in the literature were less important than the physical, the moral and religious, the social, the psychological, and the job-satisfaction factors. The cultural factors were considered the least important.

The following items were selected by 35 or more of the participants as being factors which positively affected their work performance.

1. I like people.

2. I like to be with people.

3. I am concerned and want to be helpful when I see people who are hurt or in trouble.

4. I like to see things improve in the area in which I work and care for patients.

5. For me, giving care to patients is also giving honor and worship to God, the Creator of mankind.

6. Religious and moral values help me appreciate and respect the dignity of each patient.

7. I am pleased when I see patients whom I have cared for recover their strength and health.

8. My practical nurse education has helped me learn the "how" and the "why" of care for patients.

9. Because the LPNs position is primarily at the bedside, I get great satisfaction from giving care to individual patients.

10. I have a better relationship for the total care of the patient when I have been given background information about him and his needs.

11. I am given information about the patient and his needs before I begin his care.

12. The nursing staff on the unit makes me feel that my work as an LPN is helpful and needed.

13. I do a better job when I work with friendly, cooperative co-workers.

Recommendations for further study are:

1. Further testing of the instrument to improve it.

2. To test licensed practical nurses in widely distributed geographical areas with the instrument devised for this study in order to gain the opinion of a larger number and to make comparisons between graduates from different schools and in different localities.

3. To further explore the cultural factors which affect practical nurse performance and to determine the potential for enriching the nursing care of patients.

CHAPTER IV

SOME IMPLICATIONS OF THE STUDY FINDINGS

Review of the literature indicated that the factors which affect performance arise primarily from two sources: the performer's own personality structure and the work situation. No conclusions were made from this review, but it served as the basis for constructing the testing instrument. In reading the study, it is therefore important to keep in mind that the findings were not determined from the literature but rather from the opinions of a selected group of LPNs.

In evaluating the results of this study, the writer made some observations which may be of value to others. For example, according to the findings of this study, the work performance of the LPN is not positively influenced by the cultural factors. The writer questions this finding and therefore submitted the following recommendation: to further explore the cultural factors which affect practical nurse performance and to determine the potential for enriching the nursing care of patients.

The reason for questioning this finding arises from the fact that the writer worked as a team member with members of the selected group for several months prior to the study. At that time, they were observed as being noticeably concerned about the cultural needs of patients as a part of patient care. This concern, however, was not borne out in the results of the study. Two factors may account for this. First, it may be due to the fact that the items themselves were not sufficiently clear or were too few in number to give a valid indication of the participants' true opinions. On the other hand, the practical nurses may have been acting from motives of general human interest without real insight into the potential of the cultural factors. If this is true, then the preservice as well as the inservice education may benefit from a program which emphasizes the cultural aspects of patient care to a greater extent.

Does this study have further implications for nursing? It is believed that it does. The writer noted a marked interest expressed through unsolicited favorable comments about the nature of the test after it had been administered. During the administration of the test, the group worked thoughtfully and industriously. Later, a number of them said that the test forced them to make some decisions about aspects of nursing to which they had never before given decisive consideration. They also said that it made them realize that they did have some convictions about their nursing practice. The test made them express these convictions in terms of value by forcing them to make a judgment.

After all the participants had been tested, the faculty of the selected school of practical nursing were permitted to take the test. This enabled them to better understand how forceful the instrument was for making a value judgment about the many related situations affecting LPN performance.

Because of these observations, it is thought that the instrument could well be used as a basic tool for an inservice program for LPNs. The administration of the test itself would be the starting point. After that experience, several conferences could follow during which the factors and many of the individual items would be discussed. Since the

practical nurse will constantly be in a position in which she needs to think broadly about the nursing needs of each patient in order to adapt them to the individual social, mental, and religious background, it is important that she have convictions, goals, standards, and ideals to follow. For her, each patient represents a whole new world, and she must be able to grasp his nursing needs and then view them in the total context of his experiences.

For example, the practical nurse may give care to a large number of patients who have had the same surgical procedure. If she is procedure-conscious, she will concentrate upon this abnormal but necessary situation. If she is patient-conscious, she will, however, see each patient as experiencing a similar surgical procedure that is rendered entirely different by the individuality of his own person and life experiences. With this in mind, there can be no routine for her. It is the writer's opinion that the ability to understand each patient in this manner must start in the preservice program but must also be promoted and developed during the early years of her practice as an LPN. It is for this purpose that the instrument could be used in an inservice program.

Though the instrument used for this study was not subjected to a testing program which would establish validity, it may still be of some value to nursing service when it is used as a tool for discovering problem areas of a specific group of LPNs in a particular hospital. A group response to one particular item may mean that a situation exists which needs investigation, teaching, or further clarification. For example, in this study, Item 42, "A description of my job helps me know what is expected of me," received the following response: Seven participants said that it had "much" effect on their work performance, while 37 said that it had "very little" effect on their job. Since these participants were employed in the same hospital in which they had had their entire clinical experience as students, it is likely that the job description was identical with what they were prepared to do and that therefore this item was of less concern to this group of LPNs. However, if they had come from a variety of educational programs and hospitals, nursing service would need to be concerned about such a response. It might stimulate an evaluation of the job description itself, an investigation of its explanation to the LPN at the time of employment, and a study of the actual duties and functions expected in the nursing unit.

Nursing service may also use these results to help the professional RN staff understand the LPN's needs and expectations as a member of the nursing team. For example, responses to the following items would be of special concern to a group of head nurses:

Being assigned to duties which I have been taught to do helps me to feel safe and secure.

I have a better relationship for the total needs of the patient when I have been given background information about him and his needs.

I am permitted to attend the daily nursing reports concerning patients to whom I give care.

I am permitted to participate in reports about the patients to whom I give care.

The nursing staff on the unit make me feel that my work as an LPN is helpful and needed.

I am given information about the patient and his needs before I begin his care.

What kind of person does the writer see the practical nurse to be? Though it is not the purpose of this study to propose selection policies, some of the qualities possessed by the successful practical nurse can be described. Intellectually, she is alert, accurate, possesses a good memory, communicates well, and considers daily living situations with marked insight and concern. In her personal life, she demonstrates an interest in people and their daily activities. She can undertake tasks involving average planning and organization so as to accomplish them with ease and security. She can set a goal for a particular endeavor and see it through to completion. Her contacts with people and her manner of communication evidence prudence and tact. She delights in the satisfaction of a finished task, but she can cope equally well with situations in which achievement is slow and great patience is required. In the prospective practical nurse, these tendencies will generally be noted as personal traits in her daily life. Their development will be effected through preservice and inservice training. The practical nurse should also possess a type of aggression which looks for fulfillment on the broad horizontal plane of continued growth in nursing performance rather than in the area of management skills. Viewing each patient in the light of his past and future, she places emphasis on skill, constructiveness, and creativity in meeting his needs. The person of the patient is the core of her major nursing concerns.

The writer was interested in the observation that a marked concern for the patient appeared to be related to a satisfactory work relationship for the participants. Most of the thirteen items that were selected by these LPNs as having a significant effect on their work performance were directly related to the patient and his needs. This could mean that when the work situation is satisfactory, the LPN's concern for patient care is strengthened.

APPENDIX A

THE HISTORICAL BACKGROUND AND THE CURRENT POSITION OF PRACTICAL NURSING IN THE UNITED STATES

The historical background of practical nursing in America, according to Porterfield, began with the warm, neighborly service which existed among the pioneer women, whose ideals stemmed from the religious nursing orders of Europe and from principles of genuine Christian charity. Until late in the nineteenth century, the practical nurse was the only nurse available for nursing care in the home anywhere in the United States.[1] Since few hospitals were in existence prior to this time, practical nurses were the primary source of nursing care for the American people. During the years 1900 to 1930, great changes occurred in medicine and public health. Doctors were no longer able to instruct practical nurses on an individual basis, and at best, such preparation was becoming highly inadequate for the kind of treatment required for the acutely ill. The nursing needs of surgical patients in hospitals called for a more technically skilled and theoretically prepared type of nurse.[2] In order to meet these needs, hospitals set up nursing schools. These were the years during which the numbers of registered professional nurses increased rapidly. "With the decline of the physician's personal recruitment and training of practical nurses, this important vocation lost much of its earlier appeal to responsible women."[3]

The period following World Ware II demonstrated to American "professions and the public that no single type of nurse would meet the country's need for nursing care."[4] Moore says that in 1919, when the first class for practical nurse training was organized under public education supervision, the Office of Education "encouraged the State Boards for Vocational Education to promote the organization of classes in this field."[5]

> In 1944 representatives of the National Association for Practical Nurse Education approached the Office of Education, then in the Federal Security Agency, suggesting the need for an analysis of the practical nurse occupation. As a result of the recommendations of this group, a working committee with representatives from the Division of Vocational Education, State Boards for Vocational Education and Nursing . . . was chosen to develop an analysis of practical nursing. In 1950, a committee with substantially the same membership finished their preparation of a Curriculum Guide.[6]

In 1956, Congress amended The Vocational Act of 1946 by inserting Title II, Vocational Education in Practical Nurse Training. This provided grants to states for the extension and improvement of practical nurse training. It also designated the State Board of Vocational Education as the sole agency for the administration of the plan for extending and improving practical nurse training. It did, however, provide that the supervisor of the functions of this state board should be a registered professional nurse. If this was not possible, there should be registered nurse consultative services available.[7]

Licensure of practical nurses, which brings recognition of the occupation and standards for training, proceeded so rapidly that as of 1961, all jurisdictions in the United

LEVELS OF NURSING

States had passed such laws. This means that another group of practitioners was accepted into the nursing structure. Rogers says, "The health needs of people demand variety in nursing services. If society is to be served safely and adequately, respect for and recognition of the excellence of the contribution and the contributor regardless of level of practice is essential."[8]

The New York State League for Nursing presented an interesting diagram illustrating the various levels of nursing practice.[9] It is included here (page 38) to show the position of the practical nurse as it relates to the other nursing levels.

A comparison of the functional capacity of the professional general staff nurse with that of the practical nurse was obtained by placing the functions of each as approved by the American Nurses' Association side by side and then underlining such phrases in each as would indicate differences and degrees of responsibility. The results are shown as follows:

Functions of the General Duty Nurse[10]

I. The general duty nurse is aware of the total nursing needs of the patient and is responsible for seeing that they are fulfilled.

A. Prepares, administers, and supervises a patient care plan for each patient in the group for which she is responsible.
1. Makes a detailed evaluation of his physical needs, habits, and resources.
2. Evaluates his spiritual, emotional, social, and economic needs, habits, and resources.
3. Becomes familiar with available resources, personnel, and physical facilities of the hospital and community.
4. Cooperates and shares responsibility with general duty nurses, the head nurse, supervisor, attending physician, and other personnel.
5. Communicates and acts as liaison between patient, family, physician, hospital personnel, and community agencies.

Functions of the Licensed Practical Nurse[11]

Under supervision, the following functions may be performed by licensed practical nurses with sufficient preparation to insure safe practice.

I. Assisting with the preparation, implementation, and continuing evaluation of the nursing plan by:

A. Providing for the emotional and physical comfort and safety of patients through:
1. Understanding of human relationships between and among patients and personnel, patients and families, and families and personnel.
2. Recognition and understanding of cultural backgrounds, spiritual needs and respecting the religious beliefs of individual patients.
3. Recognition and understanding of the effects of social and economic problems upon patients.
4. Protection of patients from behavior which would damage their self-esteem or their relationship with their families, other patients or personnel.
5. Participation in the development, revision, and implementation of policies and procedures designed to insure comfort and safety of patients and personnel in hospitals, other agencies, and private homes.

6. Interprets to the patient that he himself is the most effective resource in promoting successful therapy and rehabilitation.
7. Applies knowledge of drugs, other therapeutic methods, and diagnostic tests based on understanding established principles and precautions.

B. Applies scientific principles in performing nursing procedures and techniques through constant evaluation in the light of nursing and medical progress.

C. Performs therapeutic measures prescribed and delegated by medical authority. *

1. Recognizes the need for and participates in the interpretation of treatment to the patient, especially forms of therapy which may seem radical or unusual to the patient or family.

D. Continuously evaluates symptoms, reactions, and progress.

*For the nurses' legal protection, there should be a written order signed by the physician for prescribed therapeutic measures.

6. Attention to the general health care of patients, assisting with cleanliness, grooming, rest, nourishment, and elimination.
7. Maintenance of an attractive and comfortable environment for the patient with special consideration as to cleanliness, ventilation, lighting, repairs, supplies, and furniture selection and arrangement.

B. Observing, recording and reporting to the appropriate person symptoms, reactions, and changes including:
1. General physical and mental condition of patients, and signs and symptoms which may be indicative of untoward changes.
2. Stresses in human relationships between patients, between patients and personnel, and between patients and their families and visitors.

C. Performing selected nursing procedures in those circumstances where a professional degree of evaluative judgment is not required, such as:
1. Administration of medications and treatments prescribed by the physician.
2. Preparation and care of patients receiving specialized treatments administered by the physician or the professional nurse.
3. Performance of special nursing techniques in caring for patients with communicable diseases.
4. Practice of first-aid measures.
5. Utilization of nursing procedures as a means of facilitating communication and interaction.
6. Preparation and after care of equipment for treatments, administered by the physician or other professional workers, including necessary sterilization and observation of aseptic techniques.

D. Assisting with the rehabilitation of patients according to the medical care plan through:

1. Observes, records, and reports to the appropriate person symptoms, reactions, and progress.

E. Assists in patient education and rehabilitation, including the promotion of mental and physical health.

F. Assists in the provision of optimum physical and emotional environment.

G. Teaches and directs nonprofessional nursing personnel for whom she or he is assigned responsibility.

1. Awareness of and encouraging the interests and special aptitudes of patients.
2. Encouraging patients to help themselves within their own capabilities in performing activities of daily living.
3. Knowledge and application of the principles of prevention of deformities, the normal range of motion, body mechanics, and body alignment.

II. The general duty nurse participates in the administration of nursing service in a general or special hospital.

A. Interprets philosophy, aims, and policies of hospital administration to:

1. Patients and family.
2. Hospital personnel.
3. Allied health groups.
4. Community.

B. Participates in intra- and interdepartmental activities designed to assist the hospital and nursing administration in improving the service of the hospital.

C. Establishes and maintains good interpersonal relationships.

D. Coordinates the objectives and aims of nursing service.

E. Assumes responsibility for contributing to the educational program of any student who is having clinical experience under the nurses' guidance.

F. Contributes to the improvement of nursing care.

II Contributing to the attainment of the goals of the agency through:

A. Utilizing opportunities in contacts with patients' relatives to promote better understanding of agency policies.

B. Fostering cooperative effort among personnel by understanding the functions of other persons involved in patient care and by active participation in team and staff conferences.

C. Utilizing community relationships to contribute to better public understanding of health services.

III. Fulfills community obligation as a citizen and a nurse.

A. Assumes responsibility for professional growth and development.

B. Assumes responsibilities and obligations of citizenship.

III. Assuming responsibility for personal and vocational growth and development through:

A. Active participation in nursing organizations.

B. Promotion and participating in inservice programs, learning on the job.

C. Promotion and participating in workshops and institutes and other educational programs.

APPENDIX B

A STUDY OF THE LITERATURE FOR THE DETERMINATION OF FACTORS WHICH AFFECT PERFORMANCE OF LICENSED PRACTICAL NURSES

INTRODUCTION

After the comparative study of the functions of the professional nurse and those of the practical nurse was completed,[1] the literature was reviewed in those areas which dealt with the practical nurse as a person and as a practitioner. By this means, a better understanding of her performance was obtained and those factors which affect her performance were determined.

THE PHYSICAL ENVIRONMENTAL FACTORS

A composite picture of the licensed practical nurse in training, at work, and off duty shows an energetic, wholesome young woman. She speaks quietly, simply, confidently. She gives an impression of reliability and common sense. She is earnest in her answers to questions and makes no effort to appear other than what she is--a well-trained assistant in nursing the sick.[2]

According to evaluation studies made in five southern states in 1957, the average practical nurse was found to be about 43 years of age. Most of them were married women.[3] A report from Michigan that same year showed that the average student in that state was 30 years of age and that 59 percent were married.[4] In California, two years later, it was shown that 45 percent of their practical nurses were 34 to 49 years of age and two-thirds of them were married.[5] In Education for Practical Nursing, 1960, West and Crowther reported that "over 23,000 students were admitted to practical nurse education in the 1959-60 school year. Two-thirds of them were high school graduates; one-third were less than 20 years old; the average age was 25."[6]

From these reports, it appears that the typical practical nurse is a young woman who is frequently engaged in some homemaker role and shows an aptitude for the practical arts and skills. Her interests, her aspirations, and her work capacity center in such aspects as skill in manual performance, work planning, the organization of practical projects, preparedness for unexpected needs, and coordination of work and social activities for a group, usually the family, in order to meet the demands of daily living. Her functions are primarily those of doing, planning, directing, and guiding the activities of a small group.

Many personal attributes of the average homemaker were also found in her daily social contacts, such as kindness, thoughtfulness, a feeling for others, a quiet sense of taking hold and managing things, an orderliness and a promptness that registered concern and sympathetic understanding.

These basic considerations are, then, a clue to the meaning of the following statement: "You will note that the art and science of nursing evolves from the activities of

daily living."[7] Kreuter says, "The basic ministrations in nursing care are comforting measures that contribute to the sense of well-being--being there and seeing him, bathing, feeding, toileting, dressing, listening to him, moving and sheltering him, and feeling his feelings. To comfort is an object of care. Ministrations are the nursing measures from which all other nursing operations can draw comfort."[8] Orem says, "The work of a nurse is somewhat like the daily activities of the mother of a family in the sense that the nurse, like the mother, knows the requirements of daily living of persons to whom her responsibility extends."[9] As such, she is a gracious hostess.

It appears then that the role of the practical nurse, considered with her role as a current or a potential homemaker, has many aspects of performance which are common to both positions. Sarbin says, "Role conflicts occur when a person occupies two or more positions simultaneously and when the role expectations of one are incompatible with the role expectations of the other."[10] From the literature, however, this did not appear to be a problem for practical nurses, who seem to view their nursing performance as similar in many respects to the duties of daily life.

THE SOCIAL ENVIRONMENTAL FACTORS

Every organization has some kind of order in the social relations of its members. The members develop a system of mutual expectations from each other, some of which are duties and some of which are rights. For the individual, this means that social participation will occur in and through social units which are organized to serve the common interests of individuals, to regulate their actions toward each other, and to coordinate their actions toward goals considered socially desirable.

In order to understand what the practical nurse does in the nursing organization, it will be helpful to consider who she is as a person. Saint Thomas Aquinas defines "person" as "a complete substance subsisting in itself, separate from all else, and endowed with a rational nature."[11] This means that the person, ontologically, is unchanging and static throughout its total existence. As such, the ontological person is the foundation for the empirical person who, on the other hand, is changing, dynamic, and mobile.[12] More frequently, this aspect of the person is referred to as the personality. Therefore, it can be concluded that person is a gift and a birthright while personality is largely a matter of one's own achievement.[13] Brennan continues:

> . . . the important thing, in the genesis of personality, is not what we are able to accomplish, but what we actually do accomplish, what use we make of our capacities and what kind of habits we form. Integration of personality means the gathering together and the proper arranging of parts into a whole. The parts, in this case, are the acts, powers and habits of man. The whole is a well developed, well rounded principle of human behavior.[14]

It is this person with potential for personality development, morally, intellectually, and technically, who is the practical nurse in a relatively uncomplicated role within the nursing field. The practical nurse is also an individual with the capacity for self-actualization as the ultimate goal of the person is pursued.

The role of the practical nurse finds its roots basically in her person, and from these roots stem many complex interactions which result in the directed performance of ministering, assisting, and recognizing, so that its main expression is one of giving to others. Paradoxically, however, it is also known that in this very process of giving, she herself grows and develops. Though these concepts apply generally to all nurses, they take on greater importance for the practical nurse, whose resultant performance, success, and satisfaction are dependent upon these basic facts as she gives limited but constant and direct patient care in a social interaction and relationship that is both psychological and objective.[15]

Closely allied with the consideration of the practical nurse as a person is the potential of her native feminine endowment. Gallen says that woman is a human person with all the dignity of a human being. As such, she has a right to unfold her personality and seek after perfection.[16] It is to be recognized that this seeking for perfection is not independent from the duties of daily living but is accomplished in and through these very ordinary acts of every day. Gallen, however, then goes on to show that in this daily ordinariness there is a difference.

> Yet she is different, and consequently her personality unfolds under other conditions . . . a very fundamental fact about woman is that she is "alterocentric"; she centers her attention, feelings, ambition and enjoyment in other persons; she is not interested in things as much as in persons . . . a distinctive property of this attribute is that of great generosity, the capacity of giving and devoting herself to others.[17]

The greatest characteristic of femininity is that of motherliness, and this flows spontaneously into womanly compassion. In other words, her personality fuses with her great feminine endowment to reach out to others in the care of the sick. Because woman as a person is highly individual, she possesses potential for individual creative expression which enables her to understand, appreciate, and cope with the needs of many patients in a personalized, realistic manner.

In recent years, the place of the practical nurse in the nursing structure has been more clearly defined within a circumscribed area of nursing. It is one part of a vast social organization. The relationship between the whole and the parts of an organization form a structure. That which is formed and accomplished by the group is called its functions. From this union of group with groups to form larger and stronger units, an over-all social structure is formed.[18] It is within such a social structure that the activities of the practical nurse take place. At the simplest level of nursing, the two component elements of nursing--the patient and the nurse--meet and become involved. Each has dependency upon the other, for as the one gives, the other receives. Each is an individual with basic needs, and each is at a particular stage in self-actualization and development. Though some of the self-development depends upon individual capacities and initiative, the largest part is a social matter dependent upon social interaction for its formation. Personal needs are met in social participation. Consequently, this participation will be according to a firm, well-integrated conception of who the individual is and what the proper standards of conduct are under the widest variety of circumstances.[19]

As one attempts to fit the aspects of nursing into this social context, one meets the complexity of the hospital organization. Practical nursing is concerned with those nursing situations which center in the patient who needs direct assistance in self-care. Regarding this, the Guides say:

> A nursing situation is basically a social situation, involving interaction between a nurse and a patient. The nurse is in the position of being physically able, the more objective, and the possessor of understanding and ability necessary for nursing patients. The patient is in a position of dependency upon others; and this dependency may be of physical, intellectual or emotional origin.[20]

The nature of the social interaction includes an identifiable and existent psychological relationship as well as an objective nursing relationship. The more closely both these relationships approach each other, the more nearly the patient will be nursed in accordance with the requirements.[21]

Added to this dual relationship there is another interaction of social origin by which each nurse within a nursing situation has a psychological relationship to the other nurses participating in nursing the patient.[22] Therefore, every nursing situation is socially complex because of the number of people involved and the dependent interaction among them.

This relationship need was brought to the attention of those working with practical nurses by the Joint Committee early in 1951. It stated that,

> Effort must be made from the first to help the practical nurse understand her relation to the patient, the physician, the professional nurse, the family of the patient and to other professional and non-professional workers in contact with the patient. The head nurse and the supervisor should make every effort to assist the practical nurse in exercising good judgment in her various relationships with her patient and other workers. . . . The more sensitive the practical nurse can become to the patient's needs and attitudes during illness, the better she will understand her place and functions as a member of the team.[23]

Excerpts from Kempf's The Person as a Nurse describe some of the extent and scope of these social implications as follows:

> In your nursing activities you will know people from all walks of life. Their nationality, creed, race, occupation, economic level, social background and education may be different from yours, but never forget that human likenesses are greater than the differences, and that it is in the ways that we are alike that we find out mutual needs, our common ground and our human understanding.
>
> Respect for each person as a person will express itself in seeking for others the social privileges we ourselves hold dear.
>
> Fair play is the basis for the trust and confidence that we receive from our co-workers. It is a thoughtful person who can think of the expectations, needs and desires of others.

Commenting on their role as a homemaker, she adds:

> You will apply your knowledge and skills to maintaining the well-being and stability of the home. Your knowledge and experiences should also represent an asset to the welfare of your community.[24]

The relationship of the practical nurse takes on another dimension when it is remembered that contacts take place with patients who are faced with problems of ill health, worries, anxieties, and loneliness. This requires a depth of understanding and empathy which is accompanied by firmness and support. The environment of nursing activities in a hospital is also frequently charged with anxiety, tragedy, suspense, and tension, yet the nurse must be able to work in such a manner that this spirit of concern and anxiety is not carried from one patient to another. She needs to be all things to all men, with an emotional and a social adjustment that enables her to change moods, feelings, and expression according to need as she moves from one patient to another.

If the practical nurse is to meet these demands of the patients and the nursing situation, she needs to have had a good basic general education followed by an educational program in practical nursing. Her learning must be directed toward applied skills which are developed through an understanding of the processes of her interaction with the patient and the other members of a total health team. From the literature, then, it does appear that the LPN's scope of performance is primarily a simple social interaction between a patient and the LPN. It does, however, take on a much more complex structure when placed in the hospital setting, where it needs to be correlated with other patients, doctors, other nursing staff, and the patient's family members.

THE PSYCHOLOGICAL ENVIRONMENTAL FACTORS

Since the work of the practical nurse occurs in an area of direct contact with persons who have vital physical and psychological needs, it can be noted that her work takes on some of the aspects of a vocation. As such, it involves the striving for a long-term skill which possesses a limitless degree of achievement and commitment to society.[25] Orem says that nursing is a highly developed art and as such is directed to individual persons for the accomplishment of a wide range of results.[26]

Arts have their origin in the unmet needs and desires of people. They take on their primitive form when seeing, inventive, and willing persons devise practical ways to meet particular needs.[27] This occurs in simple nursing when one person helps another meet the daily needs of personal care, but it more frequently includes all the complexities of service as the needs are increased. However, the art of nursing requires an added quality which art in general may or may not possess. Because nursing is a service art, it is included in the words of Vann, who says, "There is no great art without reverence. There is skill, there is knowledge, but there is more because the performer works with the reverence that comes from love."[28] In terms of practical nursing, this art of service is best known as work performance.

Performance is influenced by the dynamics of behavior, which have their roots in those inner potentials of action that are more generally called needs, drives, or urges.[29]

Though these are often considered synonymously, the writer chose to accept Maslow's classification of psychological motivation, which is constructed on goals and needs rather than on drives and urges.[30] In effect, the person is therefore led on in life through the stages of growth and development by an attraction toward rather than by the pushes of force. Repeatedly, it was noted that recommendations for prospective practical nurses included "the understanding of oneself as a basis for understanding the behavior of others."[31] It is this understanding of self which enables the practical nurse to direct and fulfill needs, so as to promote a steady ascent toward self-actualization and an ultimate goal. In the Guides, considerable stress was placed on self-care, practical actions, practical abilities, et cetera, all of which find a basis in being able to understand patient needs and then direct them toward self-fulfillment. Orem says:

> Nursing is directed to individuals with inabilities in self-care. . . . This means that education preparatory for nursing practice enables the nurse to increasingly come to see individuals and situations as they are, and at the same time helps her to have that vision of what each person and situation is capable of becoming.[32]

Maslow divides the fundamental needs of man into the following five categories:

1. Physiological needs.

2. Safety from destructive forces, threats, and the disruption of satisfying routines.

3. Love needs, such as affection and a sense of belonging.

4. The need for esteem, with a sense of self-respect and personal adequacy.

5. The need for self-actualization.[33]

Self-actualization is the ongoing actualization of that which one is potentially. It is an unceasing striving toward unity and integration within the person.[34]

The practical nurse is a member of society who finds some of her self-fulfillment in the sociocentric relations of her work. This is an added motivation for better performance. Niemeyer said that a true and ordinate self-love involves love of the common good as something to be produced, maintained, augmented, and enjoyed in common with other persons, who share a common nature and are equally entitled to full development of their personalities.[35] Vann stated it another way when he said that if one really shares with others, one is likely to want to serve, for it is known that in helping the community, one is also helping oneself.

The Analysis of the Practical Nurse Occupation reinforced this concept as follows:

> The training program should provide additional instruction which will help her to appreciate and understand her own rights, privileges, potentialities and responsibilities as an individual. This type of instruction should produce a better personality and consequently a better qualified practical nurse.[36]

Recent suggestions for curriculum development in practical nursing included the following:

1. Increasing the knowledge of the individual characteristics of people and of the dynamic nature of the individual and of society.

2. The development of increasing objectivity in regard to self and personal actions, so as to better understand personal potential for action.

3. The increasing development of abilities in self-direction and personal actions.[37]

Specific application of these principles to the work performance of the practical nurse can be seen in her being accepted into the nursing situation as a person who has a contribution to make toward the care of the sick. Better performance is also promoted by methods of administration which share pertinent information through reports and participation in conferences concerning patients cared for by the practical nurse.

In conclusion, it can then be said that the basic psychological needs of the practical nurse originate within the LPN's own self and harmonize with those of the patient in such a way that the satisfaction of one promotes the satisfaction of the other. It is in this way that practical-nurse performance is affected by the psychological environmental factors.

THE RELIGIOUS AND MORAL ENVIRONMENTAL FACTORS

Social and cultural institutions are a source of group and individual beliefs, ideas, and values which satisfy needs and direct a traditional way of life from one generation to another.[38] The people of America, despite their varied ways of formal expression, have a simple and common biblical structure which provides the basic value system of the American heritage. Religious differences in Western cultures overlay a massive structure of common values and beliefs; Protestants, Catholics, and Jews can communicate within a shared cultural universe.[39] The Judaic-Christian doctrine has had a profound influence upon American culture which is more than a mere passive acceptance of beliefs. Rather, Williams says, the American culture is an active commitment to become deeply involved through the fullness of one's personality in the values accepted in this tradition.[40] The serious consequences of this commitment find fullest expression in the worship of God which is reflected in service to mankind. Saxon says that the great proportion of American people who participate in religious organizations testify to the fact that America is a religious nation.[41]

A second benefit which has come to the American people in the Judaic-Christian tradition is the fact that it combines religion with social morality, so that ethical norms constitute a set of widely accepted standards. These standards are supported by a doctrine which rules and commands according to the truth and justice that is compatible with the compassion and mercy of charity. This great tradition also acts as a unitary focus as well as a future-orientation, and this gives American culture its dynamic social order. The possession of a common set of ideas, symbols, norms, and values supplies an overarching sense of unity and understanding. Most prized of all values

within this social structure is the right and the dignity placed upon the individual person to be independent, self-respecting, and responsible, so as to have an internal center of gravity and a conviction of personal worth respected by others within the culture. The commitment of American society to this doctrine which stresses the value and the dignity of the individual has been real, deep, and widespread.[42] American liberty and freedom find roots in the relatively autonomous and morally responsible citizen who accepts the demands and needs of the common social good as a shared responsibility. To say that men are naturally social means that by their inmost nature they need one another to realize a full human existence.[43]

This freedom of the American heritage is compatible with behavioral restraints which are recognized as both duties and rights within the social structure. This provision for individual competence and mastery of personal actions provides man with the right to choose, not so much what he wants to do, but what he "ought" to do.

It is in the light of these great Judaic-Christian traditions that American nursing finds direction and inspiration. It is in the common sharing of the American tradition that nurse and patient find themselves members of a common social family. It is in this natural social setting that the nurse who is prepared "to give" bends over to minister to him who is in need. It is also in this very act of giving that the patient and the nurse find that they are not strangers to each other but seekers of the same ultimate theistic goal in a social situation where the needs of one are the abilities of the other.

The goals of the practical nurse mean the object, condition, or state of affairs toward which the initiated activity is directed.[44] Since all activity is performed for the attainment of some end or goal, these goals are divided into two types--the ultimate, or final, goal and the intermediary goals. The ultimate is the highest attainment of supreme happiness possible to man's nature, which was ordained for him by his Creator. All lesser goals are good insofar as they point and direct him to this final goal. Consequently, a person acts for a good which is perceived to be identical with the final goal. Wuellner said "men resemble mountain climbers . . . while the goal at every stage is the peak, they have limited objectives along the way but there is progress ever upward."[45]

Intermediary goals are the subgoals, that is, those which are more immediately attainable and secondarily become the means toward the final goal. The act of electing goals proceeds from the perception and judgment of the doer, who then performs accordingly. In other words, it can be called the intention or the level of aspiration. The Crows say that a level of aspiration is the goal which a person is content to reach in satisfying a motive. In the case of the normal individual, there is always a discrepancy between the level of achievement and the aspiration level. Consequently, the normal person is strongly motivated to improve on past successes.[46] Though the practical nurse is director of her own service activity, she will be influenced by the established goals set by educational standards, policies, patient's expectations, and her own personal goals. These will be the nursing determinants which will affect her performance. Maslow's description of the self-actualizing person toward which all people are tending, either consciously or unconsciously, speaks of two characteristics which contribute toward the goal-striving efforts of a person, who needs to find satisfaction in the day-to-day performance. He says that the self-actualizing person is spontaneous in a behavior that is marked by simplicity and naturalness. Secondly, he describes her as one

who retains freshness of appreciation. She possesses that rare virtue of being able to experience joy, wonder, and enthusiasm over and over again in similar circumstances.[47]

Though the goals of each person will vary with personalities and with situations, there are categories of intermediary goals from which they draw. Some of them are a desire for success, the need for self-esteem, the satisfaction that comes from service to others, the desire for a sense of accomplishment, and the need for economic security.

Niemeyer says that according to St. Thomas, love is the ultimate source of the dynamism in goal-striving which is basic to action. Thomistic social philosophy places all love of the common good on ordinate self-love--man loves in others the good which he first loves in himself.[48] Lester and Alice Crow say that the nature of goals is not limited to the present environment.[49] Allport enlarges this concept when he says, "Goals . . . exert a present dynamic effect upon daily conduct and in directing the course of becoming. How wrong we have been in viewing the process of growth as a reaction to past and present stimuli, neglecting the dynamics of futurity."[50]

Concurrent with the idea of futurity is that of values. It is in a value schemata that the nurse finds a commitment to those ideal goals which are over and above the expectancy of immediate pleasure. "In agreement with such schemata the person selects perceptions, consults conscience, inhibits irrelevancy or contrary lines of conduct, drops and forms subsystems of habits according as they are dissonant or harmonious with commitments."[51]

It appears, then, that the ultimate goals of both patient and nurse arise from a common Judaic-Christian tradition and find a sacred unity and potential for each one's self-fulfillment.

THE CULTURAL FACTORS

An understanding of some of the basic concepts of behavior is a prerequisite for providing nursing care to patients. Brown and Fowler have said that "What an individual perceives as happening to him is more influential in determining his behavior than what is actually happening to him."[52] Psychosocial aspects of patient care have received considerable attention in the nursing specialties but cannot be ignored in any phase of nursing if the nurse is to understand and provide for total needs.

Patients come to a hospital to obtain medical and nursing care. It must be recognized that in the process of accepting hospitalization, the patient undergoes a definite psychosocial experience. Esther Lucille Brown said that "almost no one arrives at the hospital without some degree of anxiety."[53] Hospital equipment is threatening, and the "sick role" includes the surrender of customary rights, privileges, satisfactions, and symbols of status.[54] The patient no longer makes many of his own decisions, and his independence suffers from many vital restrictions. Added to all of this, he still has to carry the real and the exaggerated worries of a family, of finances, and of his job. For a man in particular, the last is a separation from the very core of life. The nature of work and a separation from it when it is imposed by the uncontrolled force of illness require a psychological adjustment that often has to take second place to the physical

needs of the moment even when it is recognized.

It is during the noncritical days of hospitalization that these needs present themselves more forcefully to the nurse. Most people can suffer through the ordeal of illness supported primarily by the medical reassurance that they will recover. New psychosocial concepts show that illness need not be merely suffered through but rather can be an experience that can be integrated into the fullness of existence.[55] This requires a degree of human and creative insight on the part of the nurse who gives the direct patient care.

Kaplan says that our conception of creative values must encompass a wider application of the arts, so that man has a greater potential for activities which generate creative expression.[56] This expression for some patients will be a personal one in the form of music appreciation, literature, art, and handicrafts. For others, it will be a social expression, such as choral participation, drama, and general recreation. When the concept of recreation is understood in its fullest meaning as a re-creating process, it is also recognized for its therapeutic potential.

Brown describes four things which one fairly homogeneous group of persons felt were essential for comfort and satisfaction during a hospitalization period. They were books, a source of music, proper clothing which would preserve personal identity, and some kind of handiwork.[57] It is left to the nurse to know how to incorporate these activities into patient care. In order to do this, the nurse must develop sensitivity to patient behavior and skill in interpreting his needs.

Psychiatric, pediatric, and rehabilitation nursing all have found therapeutic value in music, recreation, and handicrafts. The individual nurse's understanding of these resources provides her with knowledge for interpreting individual needs and planning for them in the patient's nursing care program. This part of a nursing care plan must not be viewed as "busy work" but rather as an opportunity for creative expression, personal productivity, and personal growth. It is in a therapeutic environment which considers all patient needs that the normal daily achievement of the patient is sublimated and directed into channels which support and sustain the individual.

Cultural values and appreciations also have an influence on nursing when they help the nurse understand the therapeutic value of poise, order, and planned performance which radiates security and reassurance. This strong support is quietly transmitted to the patient during the period of direct patient care. The order which the patient perceives in the nurse's performance as well as that experienced in completed personal care is encouraging to him. The nurse's ability to bring order into his small domain of physical disability gives him confidence that the disorder which now pervades his own life can also be restored.

The practical nurse not only considers these cultural factors in the immediate therapeutic context but also recognizes their continued value for the future life experiences of the patient.[58] From a review of the literature, then, it would seem that the cultural factors should have a marked influence upon the effective performance of the LPN in the administration of direct patient care.

THE WORK-RELATIONSHIP FACTORS

The Analysis of the practical nurse's occupation says that "recognition and understanding of the proper relationships of the practical nurse to the patient, the physician, the professional nurse, the family of the patient and the general public cannot be taken for granted."[59] The educational curriculum places emphasis on those situations which require the exercise of discrimination and judgment by the practical nurse and on some of the problems of relationships which must be solved by her in the performance of her duties. Since the chief concern of the practical nurse is the care of a patient in a hospital under the direction and supervision of a physician and a professional nurse, it is obvious that her most significant relations will occur within this group.

When learning is directed toward skills, it is important to realize that these skills must be developed through understandings which, in turn, result from a need to interact with the person to be helped.[60] This requires sensitivity and self-confidence in individual and group relations. In the consideration of the social significance of the practical nurse, it was noted that the nursing situation is basically a social situation involving a nurse and a patient. "Nursing care is incomplete unless the patient himself is regarded as the integral part of that performance."[61] Since the patient's nursing requirements in the hospital are of a continuous nature, there are several nurses who give care to the patient. Therefore, another relationship arises between each nurse and every other nurse in the unit. A third relationship is derived from the medical and nursing needs which are to be co-ordinated for effective treatment. This becomes the patient-physician-nurse relationship. Other less vital but equally important relations arise from the contacts with interdepartment services and from the patient's family. The relations with the family call for a particular understanding on the part of the nurse. Often this patient-family relationship has a direct influence on the patient's progress and recovery. Here the practical nurse needs to be able to make interpretations and render support without becoming significantly involved herself. Of all of these contacts, Orem stated, "It is vital that nurses understand patterns of behavior, culture variations of people and variations in states of health in order to work effectively with others in the care of patients."[62] Proper utilization of these relations requires that the practical nurse, first of all, accept herself within a circumscribed role and, secondly, that she co-operate and co-ordinate her activities with those of others so as to promote total and constant care.

The gradual change in the division of duties that has taken place with the advent of nonprofessional personnel has produced a result which the professional nurse has not often recognized or admitted. Hughes said, "To generalize very broadly from the reports today, the professional nurse is chiefly an administrator, organizer and teacher, and the practical nurse is the bedside tender."[63] It is hard to reallocate those bedside tasks which were, to the professional nurse, the essence of conceived ideas of nursing, even though trends in medicine and nursing indicated the necessity of change. While the professional nurse appreciated and accepted the much-needed assistance of the practical nurse, she resented the inheritance by the practical nurse of the bedside tasks which provided a means of maintaining an intimate nurse-patient relationship.[64, 65] In considering this trend, it was noted that there were variations in the degree in which pro-

fessional separation from the patient occurred. They can be summed up as follows:

1. The professional nurse continued to give a large part of bedside care if she was in a smaller rather than a larger hospital and if she was in a nonprofit rather than a tax-supported institution.

2. She gave more bedside care on the evening tour of duty than on the other two tours.

3. If she was performing in an area of highly specialized nursing, she gave more bedside care.

4. She also gave more bedside care in situations where there were few nonprofessional personnel and where patients were fewer in number.[66]

What particular problems are recorded in this regard? It is interesting to note that the studies indicated that the practical nurse was not dissatisfied with working under supervision nor was she striving to usurp the position of the professional nurse. The Ramos study showed that 96 percent of the licensed practical nurses liked their jobs and that 56 percent liked the patient-care tasks the best.[67] It appeared that the greatest difficulty for the licensed practical nurse concerned the delegation of duties and responsibilities. Keresey listed as one of the major weaknesses of the practical nurse curriculum which required further research and study "the wide discrepancy between the skills and demands of the practical nurse and the activities which professional nurses and physicians are willing to delegate to her."[68] The Williams study stated, "To assign practical nurses to duties which they should not be expected to perform or for which they have not been prepared, or to fail to utilize the trained practical nurse to her fullest potential is inconsistent with good administrative practices."[69] Hughes also indicated that the decision often rested with the ability of the performer and the demand of the situation--e.g., a trusted practical nurse could be encouraged to fill in for the graduate nurse in a crisis while a less-experienced one might be expected to "keep her place."[70] Gold and Ford gave insight into the feelings of the practical nurse regarding these misunderstandings when they wrote, "LPNs try to avoid alienating their supervisors by playing their occupational role in ways which demonstrate attitudes of humility and dependence. At times it becomes difficult to maintain an adequate balance between showing competence and avoiding indication of the kind of over-confidence associated with the "dangerous nurse."[71] The situation is also complicated by the fact that practical nurses are frequently asked and expected to assume nursing responsibilities beyond their present nursing abilities and capacities.[72]

Since there appears to be so much misunderstanding on the part of RNs and nurse administrators regarding the functions and duties of the LPN and since many RNs are reluctant to take the LPN on the nursing team as a co-worker, it may be expected that work relationships will have an influence upon the performance of practical nurses.

THE ROLE-STATUS ENVIRONMENTAL FACTORS

Probably the greatest factor for misunderstanding and misconceptions regarding the practical nurse arose from the fact that her position in hospital nursing emerged

from a social need more than from the nursing structure itself. Secondly, this occurred at a rate that exceeded the adaptive and the adjustment period of the nursing staff, and as such, posed a threat particularly to the registered nurses. As a result, the status and role of the practical nurse have not been clearly defined and therefore are not fully interpreted to the health team or the public. Since many of the aspects of status are dependent upon the acceptance and recognition of those with whom and for whom one performs, it is important that this be accomplished before society can be expected to fully admit this newcomer into the accepted roles of her service field.

Within the work world, there tend to emerge two statuses which are of particular significance to the worker. There is the formal structure of status established by the organization which expresses, through definition and description, the worker's exact place within a hierarchy of positions. In addition to this, it is not uncommon for the persons themselves within the functioning unit to develop an informal status structure which is separate from that of management. It may be based on age, salary, type of work, or skills. Sometimes, this informal status is more meaningful to the worker than the organizational status is, because it affects his or her immediate day-to-day activities in a manner which brings satisfaction and security.[73]

Role, on the other hand, is the "action pattern necessary for holding one's position in the structure of any one of the many subgroupings to which they belong."[74]

> A role is a relationship which a person is expected to have with his associates in functions like or unlike his own. It involves far more than the delineation of tasks and activities . . . it is a set of expectations on the part of each party to it and these expectations include, in the addition to the performance of tasks, the assumptions of certain responsibilities and privileges.[75]

> The occupational role, like the social role, consists of guides to behavior which any person playing the role utilizes to know what other people expect of him, and, consequently, what he must expect of himself when representing himself in that role.[76]

Understanding this, it can be assumed that the performer will sometimes play the role in such a way as to develop, maintain, and protect his status.

How does all of this fit into the practical nurse's world of performance? Gold and Ford wrote:

> The modern practical nurse was created within our generation with a view to filling the gap in skill level between that of the professional nurse and that of the nurse aide. The great and continuing need for additional trained nursing personnel has been largely responsible for this feeling that the new occupation must quickly find an appropriate place in the skill hierarchy of nursing. The practical nurse's role was defined formally by a United States Office of Education report, but this definition was basically related to a series of nursing activities and functions.

The greatest difficulties in establishing practical nursing as conceived by leaders of the movement to modernize the occupation have come from numerous failures of both RNs and LPNs to understand precisely what they could and should expect of each other. These failures have often appeared to be products of poor job management, inadequate hospital policy, and unrealistic training procedures. Underlying them all has been a painfully slow development of role relationships . . . so slow that in many instances technically competent members of the two groups have been unable to work effectively together simply because neither understands how to relate her role to the other.[77]

Though the greatest problem arises from the RN-LPN relationship, it is also important to recognize that other relationships enter in as well. Some of these are with the physician, the patient, nonprofessional co-workers, and the public at large. These, however, have had less influence and certainly have been less reactionary. If the practical nurse is prepared and is performing adequately at the bedside, she usually receives an accepted but not generally a well-defined recognition from the doctor and also from the patient, since they are both primarily concerned with care per se. The lack of public understanding is perhaps best described by the warning given by Esther Lucille Brown in 1948: "No system of training for practical nurses is likely to succeed unless the public that creates broad general policy and provides funds . . . /Is/ prepared to manifest an ACTIVE interest in practical nursing far beyond any interest yet shown."[78] The public as well as the nursing staff needs to know and accept the practical nurse. It is also interesting to note that successful defining of the practical nurse's role does not necessarily require rigid standards of pay, technical procedures, dress, deportment, values, et cetera. But there is great need for standards of this kind before the organizational climate becomes favorable toward the practical nurse role.[79] Much improvement in this regard has been seen in the past two years, but the individual practical nurse still encounters this lack of understanding in her individual relations more so than does the group as a whole.

Other symbolic methods have been used by practical nurses in an attempt to establish their status and, to a degree, enhance it with prestige, such as the wearing of a white uniform and the traditional cap and pin, the determination of a satisfactory salary scale, and the requirement of a higher educational level prior to acceptance in a school of practical nursing. Communications also entered into this aspect because the professional nurse was frequently hesitant to admit the practical nurse into the realm of patient care reports. This not only interfered with her status and role but also hampered the performance of her work.

More serious than all of these, however, are the difficulties with work assignments. Loftin says, "The precepts range all the way from the idea that the practical nurse is little more than a maid to the attitude that she is a semi-professional person whose status in nursing is just under that of the professional nurse."[80] A few direct quotes from studies are used to illustrate what practical nurses call their greatest problems: "For four days last week I was in complete charge of two floors."[81] "Co-workers do not know what the LPN can do and cannot do." "People think I am an RN, even with my emblem." "People think I'm an aide."[82] The instructor says: "Sometimes she is called on to do one thing and then another time she will be told that she is not supposed to do that." "It makes no difference what we teach in the schools, the hospitals themselves set the top level of performance."[83]

Other questions directed to the practical nurse by the patient and his relatives also reflect the status concept of the public. For example, practical nurses are asked, "When are you going to become a real nurse?"[84]

The results of the so-called Hawthorne studies may throw some light upon the meaning of this role-status problem for the practical nurse in both her personal and her work life. The report states:

> Although money represents a powerful motive and fatigue exerts a significant influence on the worker, both of these factors may well be secondary to the psychological and social needs of the individual employee. Men and women work, just as they engage in recreation and other activities in an effort to satisfy their needs. The most desirable work environment is one in which needs and aspirations are satisfied in a wholesome, realistic way.[85]

This includes "the amount of individual prestige or status attached to the job as seen by the community."[86]

This review of the literature indicates that the role and the status of the LPN in nursing is poorly defined. As a result, the practical nurse is not fully recognized or accepted in her proper position by other nursing personnel or by the public. This could be a source for some misunderstandings as well as ineffective performance in certain situations.

THE JOB-SATISFACTION FACTORS

The ministering character of nursing requires understanding and ability in the area of goals, needs, and relationships if it is to be utilized effectively. The Alabama study indicates that this integration of personal goals with patient needs and hospital objectives may have been the saving strength of modern practical nursing in its pioneering stages. The rewards, both tangible and intangible, are the fruit of achieving intermediary goals and the spur for the ultimate goal. Some of these goals were best indicated by practical nurses themselves and were reported in other studies. In California, 96 percent said that they liked their work for reasons which were associated with intrinsic satisfactions that result from "helping people."[87]

The Louisiana study indicated that many practical nurses were in nursing because of a genuine wish to help the unfortunate rather than for economic reasons.[88] In Alabama, many practical nurses defined success in terms of mutually satisfactory relationships with RNs. But this was not their only criterion for success, for self-involvement in bedside nursing activities is so great that practical nurses feel that they are successful when they see the patient recover and receive his thanks for all that they have done to help him get well again.[89]

In Minnesota, three-fourths of the practical nurses indicated satisfaction except for three items--namely, the scheduling of hours, salary, and the opportunity for advancement.[90]

A recent study related to job attitudes and their effect on performance showed that workers most frequently attributed a sense of satisfaction to those factors which promoted successful achievement and a possibility for personal growth.[91] The factors which led to positive job attitudes did so because they satisfied the individual's need for self-actualization. According to several personality theorists, this concept of self-actualization is the supreme goal of man to fulfill himself as a creative, unique individual according to his own potentialities in every area of life, but particularly in the work role. These job factors and opportunities within the job reward the needs of the individual, so that he can advance toward these aspirations.[92]

Probably the extreme need for both professional and nonprofessional nursing personnel pushed the utilization of practical nurses into the area of service more rapidly and extensively than was wise or desirable, with the result that hospital nursing has become "very unstandardized and what a nurse does seems to depend upon where she is."[93]

In a report at an intraregional conference on practical nurse education, Stokes stated the role of the practical nurse in a general hospital very well when she said:

> Her services are used not only in the care of the chronic and convalescent patient but in the care of the more acutely ill patient where she works in team relationship with the professional nurse. She meets a real need in these hospitals where her valuable contribution is recognized and where she is accepted for the contribution she makes to better patient care. Her presence on the wards as a member of the nursing team makes possible the extension of services of the professional nurses working with her.[94]

These facts regarding the practical nurse's position have been generally well accepted by hospital and nursing service administration, who have keenly felt the pressure of the public's increased demands. However, along with the acceptance, many problems came into the nursing situation by the unlimited use of the practical nurse decided in terms of needs more than in terms of preparation and role. The greatest of these problems are: first, the use of the practical nurse for functions for which she has not been trained and second, the inadequate or the inefficient utilization of services. Too often, little or no consideration is given to the fact that there is undue duplication of activities among the RNs and LPNs. The George and Kuehn study states the following in this regard:

1. Practical nurse skills were not utilized economically and effectively on the medical-surgical ward unit studied.

2. Approximately 80 percent of the activities allocated to the practical nurse in the occupational analysis and occurring on ward X could be performed safely by less skilled and lower salaried workers.[95]

From the study of the five southern states, it is evident that total efforts for the improvement of practical nurse training and utilization of services seem to have a general agreement regarding the activities most frequently performed. These form a core of 14 general functions accepted for the hospital-employed practical nurse.[96] This was comparable to the Michigan study in all aspects except for the administration of medicines.[97] The California study of 1959 was also in agreement but added one more

to this nucleus of activities. This was the ability to safely maintain aseptic technique in applying sterile dressings and in the procedure for catheterization. The approval of practical nursing instructors for this addition was congruent with current practice in that state.[98]

Other studies offer still more specific examples of what this confusion can arouse in the work situation. In Alabama, LPNs found that they were not allowed to do many of the things they had been taught to do, while others said they were expected to do things for which they had not been trained and this made them feel insecure in their work.[99] In Louisiana, the number-one problem was the uncertainty about where the duties of the practical nurse stopped. Bertrand says that it is not right to expect the practical nurse to do the work of the registered nurse but that LPNs were being forced into this position.[100]

Besides the problem of poorly defined role and functions for the practical nurse, she also has to face the key problem of any new occupation, and that is the one of upward motility. Established occupations almost always function in an institutional setting that provides for promotions of some kind. The Guides for Developing Curricula supports the same consideration when it says, "The future role of the individual practical nurse within the legal confines of her role is limited by her potential for acquiring new understanding in nursing and in developing added abilities in nursing practice."[101] The 1961 California study says that although 80 percent of the 304 respondents were currently employed in hospitals and nursing homes, only 54 percent wanted to be so employed five years from then.[102]

The literature does, however, indicate another strongly supported aspect of practical-nurse performance which contradicts the above fear.

There is evidence that the nurse does find satisfaction in her work despite the lack of clearly defined functions. In California, nurses expressed satisfaction in terms of "feelings of worth because of their contribution, being an important part of the team, pride in being able to comfort people, skill in interpersonal relations and feelings of worth as an individual."[103] The Alabama study states it this way:

> Although practical nurses are presently destined to begin and end their occupational career on approximately the same status and income level, they inevitably get so wrapped up in their work that they remain in it because of sheer interest. Their primary rewards are those derived from relationships with understanding and appreciative RNs and patients.[104]

Then there is the study performed by Argyris in which it was shown that the nurse's greatest need is to be indispensable and to be of help to others because of her personal warmth and therapeutic skill.[105]

It would seem, then, that there is potential for improving the shortage of nursing personnel by utilizing the LPN in her proper position of direct care to patients if the nursing world capitalizes on these predispositions of the nurse and settles the role-status inconsistencies. When she is educated for the designated role of the LPN, she will see that her advancement, growth, and development take place on the horizontal plane of practice and experience rather than through upward advancement in position.

APPENDIX C

CATEGORIZATION OF THE PRINCIPLES OF HUMAN ADJUSTMENT ACCORDING TO SCHNEIDERS[1]

I. Personality factors.

A. Heredity.

1. Sensory capacities.

2. Motor capacities.

3. Intelligence.

4. Emotional disposition.

5. Basic motivations.

6. Imagination and memory.

B. Environment.

1. Physical environmental factors.

a. Home conditions.

b. Cleanliness.

c. Order, planning, and coordinating.

d. Basic skills of doing things.

e. Awareness of ease and comfort in doing things.

f. Healthy living environment.

2. Social environmental factors.

a. Social contacts in the home.

(1) With children.

(2) With people of all ages.

---

1. Alexander A. Schneiders, Introductory Psychology: The Principles of Human Adjustment (New York: Rinehart and Company, Inc., 1959), pp. 50-91.

b. Response to people's needs for:

(1) Consideration.

(2) Helpfulness.

(3) Self-directing support.

c. Adequate identification with womanliness.

d. Adequate possibility for identification with an ideal.

e. Ability to interiorize the experiences of others.

f. Ability to integrate social experiences with skills for a constructive purpose.

g. Adequate basic education.

h. Basic education as a source of inspiration.

3. Moral and religious environmental factors.

a. The development of standards.

b. The acceptance of a set of sound values.

c. A deep respect for the individual.

d. A deepening of one's own spiritual capacity.

e. A respect for and a sense of dedication to God.

f. A love and respect for one's neighbor and his independent self-direction.

4. Cultural environmental factors.

a. A general appreciation for music.

b. A general appreciation for reading.

c. A general appreciation for art.

d. A general appreciation for recreation.

5. Psychological environmental factors.

a. The need for a purpose and an aim in life.

b. The need to be safe.

c. The need to achieve.

d. The need to be recognized.

e. The need to belong.

f. The need to participate and make a contribution.

g. The ability to find variations in a day-to-day situation.

h. An opportunity to plan some part of the objective performance.

II. The work-situation factors.

A. Relationships in the work situation.

1. Relationships arise:

a. From contacts with persons of immediate association.

b. From contacts with co-workers.

c. From transitory and occasional contacts.

2. These contacts influence:

a. Acceptance.

b. Cooperation.

c. Utilization of skills.

B. The role-status factors.

1. The role-status factors of an employee are a source of:

a. Self-security within the group.

b. Job security.

c. Job satisfaction.

2. The role-status should be known to:

a. The co-workers.

b. The public at large.

c. The individual employee herself.

C. The job-satisfaction factors.

1. Job-satisfaction factors range from the need to work for a salary to that of achieving a full development of one's self-realization.

APPENDIX D

CATEGORIZATION OF FACTORS WHICH AFFECT THE PERFORMANCE OF LPN'S AS DETERMINED FROM THE LITERATURE

I. Personality factors.

A. Heredity.

1. These were not determined or tested in this study, because they were the basic requirements for the selection and admission to the school of practical nursing.

B. Environment.

1. Physical environmental factors.

a. The role expectations of the practical nurse as a person and as a nurse-performer are compatible.

(1) Interested in homemaking.

(2) Interested in the practical arts of "doing."

(3) Likes to plan projects of a simple and practical nature.

(4) Has skill in manual performance.

(5) Is interested in child care, growth, and development.

(6) Is interested in daily living activities.

(7) Has a constructive interest in improvement in self and in others.

2. Social environmental factors.

a. The quality and depth of the practical nurse's performance is promoted and complemented by her native feminine endowment.

(1) Compassion.

(2) Gentleness.

(3) Understanding.

(4) Individual creative expression.

(5) Empathy.

b. The practical nurse uses her total person in giving care to patients.

(1) The basic roots for ministering to the sick are found in her person.

(2) In the process of giving to others, she herself experiences a growth and an enrichment of her own person.

(3) Basic nursing education must rest on a firm general educational program.

3. Moral and religious environmental factors.

a. The genuine concern of the practical nurse with giving skilled care to the sick stems from basic convictions.

(1) Respect for herself.

(2) Love and respect for others.

(3) The recognition of ultimate goals in the life of the patient and in her own life.

(4) The acceptance of a standard of values which stems from Judeo-Christian belief in a provident God.

(5) The acceptance of the fact that man is endowed with the capacity to be self-determining in his way of life.

4. Cultural environmental factors.

a. The social interaction in the nursing situation is one of psychological implications as well as that of direct objective administration.

(1) Some patients can be reached and helped through such media as music, art, and reading material as well as interesting and appropriate conversation.

(2) A purposeful recreational plan can be used for help in developing self-directing care and activity.

5. Psychological environmental factors.

a. The basic psychological needs of the practical nurse are the same as for any person.

b. The basic psychological needs of the practical nurse harmonize with the basic needs of the patient in such a way that the satisfaction of one promotes the satisfaction of the other.

c. The practical nurse's role in the nursing structure concerns the total personal needs of the patient more than the scientific aspects of disease and treatment.

(1) The practical nurse must see the patient as a primary entity in her work-performance situation.

APPENDIX E

VALIDATION OF THE STATEMENTS DERIVED FROM THE DETERMINED FACTORS BY EXPERIENCED REGISTERED NURSES

THE CATHOLIC UNIVERSITY OF AMERICA

Washington, D.C.

February 24, 1962

Dear _____:

As part of my work at the Catholic University of America, I am currently engaged in doing research for a dissertation which will complete requirements for the Degree of Master of Science in Nursing.

With the permission of my Major Professor, I am attempting to collect data which will help in the construction of a questionnaire for a selected group of Licensed Practical Nurses.

The factors which affect the performance of the Licensed Practical Nurses who are employed for the care of patients in the hospital were determined from the literature. Seventy-four statements were derived from these factors and are herein submitted to you in a pilot study. You are one of nine experienced, professionally registered nurses who have been selected to participate. This group includes three Consultants, three Instructors in Practical Nursing, and three Supervisors of Licensed Practical Nurses in hospital nursing.

With the help of the information which you contribute, the final questionnaire will be constructed and presented to a group of selected Licensed Practical Nurses to determine their opinions regarding the effect of these factors on their personal performance.

Trusting that this information solicits your interest, may I ask for your kind cooperation in this study. A prompt return of your responses will be most helpful. A stamped, self-addressed envelope is enclosed for your convenience.

Thank you for this professional assistance.

Sincerely yours,

Sister M. Amadeus Klein, O.S.F.

FACTORS WHICH AFFECT THE WORK PERFORMANCE

OF THE LICENSED PRACTICAL NURSE

In a study of the literature concerning the Licensed Practical Nurse, several factors have been determined which affect the work performance of the LPN who is employed in a hospital for the care of patients. Statements about these factors are presented to you for consideration. If any statement is not clear, your suggested change or a comment would be welcomed. You may write it below the statement or on the reverse side of the page. If you have suggestions for additional statements, please feel free to express them on the back of the last page.

Thank you.

Directions:

In this pilot study there are five (5) possible ways of indicating your response to each of the following statements. In the column to the right please check the one which best expresses your personal opinion.

Example:

	Strongly agree	Agree	Undecided	Disagree	Strongly disagree
Licensed Practical Nurses (LPNs) make a contribution toward better patient care on the hospital team.					

	SA	A	U	D	SD
1. She should like to work in an orderly, planned way.					
2. It should not be necessary that she like to have things neat and clean in her work area.					
3. She should have good manual dexterity.					
4. She would like to see persons, work situations and things improve in the area in which she works.					
5. Rest, proper eating and general healthful living should have little effect on her work performance.					
6. She should like to plan work and social activities in her personal daily life.					

	SA	A	U	D	SD
7. She should like people.					
8. It is not necessary that she should like to associate with people.					
9. She should be able to feel a sense of concern and sorrow for people who are hurt or in trouble.					
10. She should want to make situations easier for people to bear.					
11. She should be thoughtful of others' needs.					
12. If she feels sympathetic for others, it is not necessary that she show this feeling by doing things to help them.					
13. If she gives help when it is needed, it is not n necessary that she foresee other needs that may arise.					
14. She should tend to avoid disagreeable situations for others when possible.					
15. She should have an ideal of womanhood and of nursing.					
16. She should be able to use many of her daily life habits (gentleness, consideration, etc.) in her nursing contacts.					
17. Her high school education does not contribute significantly toward development of skills and relationships in nursing.					
18. Practical Nursing education should have helped her learn the "how" and the "why" of special care for patients.					
19. She should be able to use her personal qualities of understanding, patience, compassion, etc., to add to her nursing skills.					
20. Her Instructors and Supervisors should have had little influence on the development of nursing skills.					
21. She should have increased her skills in direct patient care from working with good nurses.					

	SA	A	U	D	SD
22. Her assignments as a student should be planned to meet the needs of patients in general, rather than for the individual patient.					
23. Instructors should have inspired a desire to be a skilled, understanding and helpful nurse.					
24. Work performance evaluations as a student and as a graduate should help her learn more about herself as a practical nurse.					
25. Religious beliefs and teachings will have little influence on patient care.					
26. Religious and moral values should help her appreciate and respect the dignity of each person.					
27. Religious morals and values should help her understand that each person has a way of life which she must try to understand and respect.					
28. Giving care to others should be an opportunity to express honor and worship to the Creator of mankind.					
29. Giving direct care to patients should be more than a job because of the dignity of the service.					
30. There is little connection between charity to one's neighbor and service to the patient.					
31. Giving care to patients should help make the LPN a better person.					
32. The LPN's own appreciation for good reading will be of little help in patient conversation.					
33. An appreciation for artistic design in general should contribute to the ease of the LPN's work and to patient comfort and security.					
34. An appreciation for good music has little value for the LPN in her work situation.					
35. The LPN's interest in recreation and hobbies can be used to help rehabilitate the average patient through the stages of recovery.					

	SA	A	U	D	SD
36. Recreational interests should be utilized to make the patient more independent and self-directive.					
37. The nature of the LPN's work should contribute toward her purpose in life.					
38. She should see her job as one of service to others.					
39. She should be able to utilize the work situation toward bettering herself as a person.					
40. Aiming at being a good and capable LPN has little connection with her ability to be a good person.					
41. Assignment to duties for which she has been educationally prepared should make her feel capable and secure.					
42. She should be able to take care of the same patient over a long period of time and still find it a challenging situation.					
43. The scientific aspects of the patient's illness should be of primary concern to the LPN.					
44. It should be a source of pride in achievement for the LPN to see patients to whom she has given care recover their strength and health.					
45. Since the LPN received her assignments from registered professional nurses she has no opportunity to plan her work.					
46. The LPN should be made to feel that she belongs to the nursing staff in a vital way.					
47. The LPN does not need to know much of the background information about the patient assigned to her care since her work is primarily concerned with skills.					
48. She should be permitted to attend nursing reports.					
49. It is not necessary that she participate in the nursing reports about the patients for whom she has cared.					

	SA	A	U	D	SD
50. Acceptance of the LPN should have no effect on her work performance.					
51. Her relationship with the patient will be better and work performance easier if she has been given information about the patient and his condition.					
52. She should be capable of handling <u>any</u> assignment given her by the registered professional nurse.					
53. She should know what her work entails because of a specific and written job description.					
54. If the patient does not know how the LPN functions on the nursing team, he may be frightened and ask for an RN to give his care.					
55. If an RN does not have confidence in the position and performance of the LPN on the team, her relationship with the LPN will not be affected.					
56. If a Doctor comments favorably about the care an LPN gave to a patient it will have a good effect on that LPN's future work.					
57. The regular assignment of the LPN to housekeeping and equipment duties on the nursing unit instead of patient care should have no influence on her work performance.					
58. Cooperation between the registered professional nurse and the LPN should be closely associated with acceptance of each other's role.					
59. Acceptance of the LPN should have no effect on the best utilization of the LPN's nursing skills.					
60. Patients do not need to know the role-status difference between the RN and the LPN.					
61. The performance of the LPN at the bedside is not affected when patients ask the LPN when she is going to finish nursing and become an RN.					
62. The Doctor should know the role-status of the LPN.					

	SA	A	U	D	SD
63. When there is a shortage of help on the nursing unit the RN should ask the LPN to take over more nursing responsibility.					
64. This changing degree of responsibility described in the above statement should not affect the LPN's performance.					
65. The LPN wishes she were an RN primarily for the status she would be assured.					
66. The LPN likes her role because she can remain close to the patient and provide for his care at the bedside.					
67. Since the LPN's role is primarily with the patient at the bedside, the greatest recognition of this role should come from the patient or be centered in the patient and his care.					
68. Even though the LPN's role in the nursing structure does not offer an opportunity for advancement, she should find satisfaction in this circumscribed role because of its importance to patient care.					
69. The salary which the LPN earns should have some effect on the long term performance of the LPN.					
70. The hours of work will have no effect on the performance of the LPN.					
71. Hours of work which can be integrated with the LPN's home situation should have a satisfactory effect on long term performance.					
72. Nursing contacts with patients should have an influence on the LPN's personal convictions regarding a way of life.					
73. Friendly, cooperative co-workers have no influence on the LPN's performance.					
74. Identification with a hospital staff which recognizes the skill and ability of employees should have a positive effect on the performance of the LPN.					

APPENDIX F

EXPERIENCE RECORD OF CONSULTANTS, INSTRUCTORS, AND SUPERVISORS WHO EVALUATED THE QUESTIONNAIRE

1. Director of a practical nurse program for the past eight years. Wide experience in general nursing. Registered nurse. Bachelor of science.

2. Director of school of practical nursing for five years. Currently an instructor in practical nursing. Wide experience in general nursing. Registered nurse.

3. Instructor in a school of practical nursing. Wide experience in general nursing. Registered nurse.

4. Program specialist for practical nurse education in the United States Office of Education. Master's degree.

5. State supervisor for practical nurse education. Master's degree.

6. Current supervisor in a large general hospital with licensed practical nurses employed in area of psychiatry. Master's degree.

7. Current supervisor in a large general hospital with licensed practical nurses employed in area of surgical supervision. Registered nurse.

8. Current supervisor in a large general hospital with licensed practical nurses employed in area of medical supervision. Registered nurse.

9. Instructor in a university preservice undergraduate nursing program. Master's degree.

APPENDIX G

EDUCATIONAL PHILOSOPHY OF THE SELECTED SCHOOL OF PRACTICAL NURSING

The educational philosophy of The _____ School of Practical Nursing is based on the Christian philosophy that God has endowed each person with a nature which attains its highest fulfillment in serving God through serving others. An educational program designed to prepare young women for such service must include provision for their intellectual, spiritual and emotional development as well as the acquisition of the special knowledge and skills needed to give nursing care in the areas for which they have been prepared. Participation of the students with the faculty in planning and evaluating the educational program promotes mutual understanding of objectives and is, in itself, a source of individual growth in social understanding.

OBJECTIVES OF THE EDUCATIONAL PROGRAM

1. To guide the student in the development of her spiritual life and in the acquisition of a correct and practical code of personal ethics.

2. To assist the student to acquire a well-rounded concept of physical, mental and emotional health in order to properly maintain her own health and to influence desirable health habits and attitudes in persons in her sphere of activity.

3. To teach the student the basic nursing procedures that will enable her to care for patients with minor ailments, the aged and the chronically ill who are under the care of a physician.

4. To help the student acquire the knowledge and develop the skill necessary to assist the professional nurse in the care of the critically ill patient.

5. To provide the student an opportunity to understand better interpersonal relationships through experience as a member of a nursing team.

6. To help the student understand the contribution she can make to God and to society through sympathetic, intelligent and efficient care of the sick.

APPENDIX H

STATE QUALIFICATIONS FOR THE

SELECTED SCHOOL OF PRACTICAL NURSING

(Seal)

STATE OF MINNESOTA
DEPARTMENT OF EDUCATION
ST. PAUL 1

Vocational Education
4th Floor-Centennial Bldg.

February 7, 1962

Sister M. Amadeus Klein
Duns Scotus House of Studies
832 Varnum Street, N.E.
Washington 17, D. C.

Dear Sister Klein:

At the present time, we have 20 practical nursing programs in Minnesota. Of these, 14 are located in public schools, 1 at the University of Minnesota, and 5 are hospital programs.

The practical nursing program which is set up in conjunction with the public schools comes under the supervision of the U.S. Office of Education at the national level, State Department of Education at the state level, and Local Board of Education at the local level. Clinical experience is provided by cooperative agreement with local hospitals.

The salaries of the coordinators and instructors are paid by the local public schools. The local schools are reimbursed by the State Department of Education from federal and state vocational funds. At the present time, they are reimbursed 75% for salaries and 50% for travel and equipment.

These programs are all full time one year programs. The curriculum is planned to offer instruction and clinical experience in nursing care of patients with common diseases, mothers, infants, and children. Some principles of nursing care of the mentally ill is also required and clinical experience in this area is encouraged. Six programs now offer clinical experience in care of the mentally ill. In addition, Vocational Relationships, Body Structure and Function, Personal Family and Community Health, and Nutrition are taught. The minimum number of hours of instruction is 480. At the completion of the program, the student is eligible to write the state board examination for licensure.

The Minnesota Board of Nursing is responsible for accrediting all programs of practical nursing in Minnesota. All programs in Minnesota are state accredited.

I am sending you a list of accredited schools and anyone of them would be happy to send you a brochure upon request.

Sincerely,

(signed) Loretta C. Mathiowetz
State Supervisor
Practical Nurse Education

APPENDIX I

QUESTIONNAIRE FOR THE SELECTED LICENSED PRACTICAL NURSES

THE CATHOLIC UNIVERSITY OF AMERICA

Washington, D. C.

Code _____

Age, last birthday _____.

Education: Grade School--number of years _____.

High School--number of years _____.

School of Practical Nursing from which you graduated:

Name _____.

City _____ State _____.

Year of graduation from the School of Practical Nursing _____.

How long was the program of Practical Nursing from which you graduated? _____ Years _____ Months

Are you currently licensed? _____ In what state? _____

How long have you worked in this hospital? _____ Years

_____ Months

Marital status: Married _____ Single _____ Widowed _____ Divorced _____

Do you work: Full time _____ Part time _____?

Thank you.

Instructions:

When you, as a Licensed Practical Nurse, come to the nursing unit to give care to patients you bring yourself: as a person,
as a trained practical nurse, and
as an employee of the hospital.

Many factors influence the way in which you will give care to patients day after day. These factors come from: the things you believe,
the things you have been taught,
your past experiences, and
the actual work situation itself.

Please read each statement very carefully. Many of the statements are good, and it will be difficult to decide which one is the best. In this case, you are to decide which one is the best for you. Do not answer it according to how your instructors would want you to be nor how you would like to be but as you actually feel and are right now. Some of the statements you will not like, and they will, therefore, also have a great effect on you. This is what we want to know, so be very frank and honest.

Examples: 1. My Head Nurse is very concerned about patient needs and helps me understand them too.

2. The nursing personnel on the unit where I work are permitted to come late on duty very often.

These examples might not happen in the nursing unit where you now work, but if they did, how would they affect you? Before you make a decision about each of these statements, think to yourself: Does this situation affect me and my care of patients:

Very Much Much Average Very Little Hardly at All?

Now you are ready to start:

1. Take the pack of 60 statements and the 5 envelopes.

2. Place the envelopes in front of you in the following order:

Very Much Much Average Very Little Hardly at All

3. Read each statement and sort them into two groups:

Very Much and Hardly at All

so that there are 30 statements in each group.

4. Then take the "Very Much" group, and select the 8 statements which you think affect you the most. Put them in the "Very Much" envelope.

5. Now from the rest of that same group, pick out the 14 statements which you think have much effect on you and your work. Put them in the "Much" envelope. Eight statements will be left over--put them in the "average" envelope.

6. Now take the "Hardly at All" group of 30 statements, and select the 8 statements which you think have the very least effect on you and your work. Put them in the "Hardly at All" envelope.

7. From the rest of this group, select 14 statements which have very little effect on you. Put these in the "Very Little" envelope. There will be 8 statements left over--put them in the "Average" envelope.

8. If you wish to check and change any of the statements after you are finished, you may do so.

9. Finally, reread all of the statements in each envelope, and count them to be sure that there are exactly as many in the envelope as are marked on the outside.

10. Seal each envelope. Put the 5 small envelopes into the large envelope and seal it too.

Thank you.

PHYSICAL FACTORS

1. I work in an orderly, planned way.

2. I like to do things which require the use of my hands.

3. I like to see things improve in the area in which I work and care for patients.

4. Rest, proper food and general good health influence my working ability.

5. I like to plan things to do at home or with a group.

SOCIAL FACTORS

6. I like people.

7. I like to be with people.

8. I am concerned and want to be helpful when I see people who are hurt or in trouble.

9. I want to make difficult situations easier for people whenever I am able to do so.

10. I show my sympathy for people best by doing things which will help them.

11. I know an ideal woman and nurse whose example I try to follow.

12. My grade and high school education has contributed toward my understanding of people.

13. My practical nurse education has helped me learn the "how" and the "why" of care for patients.

14. I use my personal qualities of understanding, patience, compassion, etc. to add to my nursing skills.

15. My Instructors and Supervisors helped me develop nursing skills.

16. I increased my skill in giving direct care to patients by working with good nurses.

17. Evaluations of my work as a student and as a graduate help me learn more about myself as a practical nurse.

MORAL AND RELIGIOUS FACTORS

18. My religious beliefs and teachings help me want to give good care to patients.

19. Religious and moral values help me appreciate and respect the dignity of each patient.

20. Religious and moral values help me respect each patient's own way of life.

21. For me, giving care to patients is also giving honor and worship to God the Creator of mankind.

22. Giving care to patients is also a chance for me to give charity to my neighbor.

23. Giving care to patients has helped me become a better person myself.

CULTURAL FACTORS

24. My appreciation for artistic design helps me work in a patient's room in a calm, smooth and easy manner of giving care.

25. An appreciation for good music has helped me find programs which interest and benefit patients.

26. My appreciation for good reading has helped me in my conversation with patients.

27. My interest in recreation and hobbies has helped me see ways for patients to be rehabilitated and make progress in helping themselves.

PSYCHOLOGICAL FACTORS

28. My work situation as a practical nurse improves my planning and organization of other activities in my daily life.

29. Trying to be a good practical nurse fits in with my trying to be a good person.

30. Being assigned to duties which I have been taught to do helps me feel safe and secure.

31. Patients in rehabilitation need almost the same care over a long period of time, but it is important for me to see each day as a new one in their lives.

32. Since the RN is responsible for understanding the scientific problems of illness, I can concentrate primarily on nursing care.

33. I am pleased when I see patients whom I have cared for recover their strength and health.

34. Even though my assignments are made out for me, I can still plan many of the things I do for patients.

35. I know that I belong to a nursing staff which is helpful to humanity.

36. I have a better relationship for the total care of the patient when I have been given background information about him and his needs.

37. I am permitted to attend the daily nursing reports concerning the patients I give care to.

38. I am permitted to <u>participate</u> in reports about patients I give care to.

39. The nursing staff on the unit make me feel that my work as an LPN is helpful and needed.

WORK-RELATIONSHIP FACTORS

40. I am given information about the patient and his needs before I begin his care.

41. I am expected to handle <u>any</u> assignment which is given me by the RN.

42. A description of my job helps me know what is expected of me.

43. It bothers me when the assignments I get seem to indicate that I cannot do the work an LPN usually does.

44. Very often I am assigned to cleaning duties on the nursing unit rather than the care of patients.

45. When the RN understands what nursing duties I can do as an LPN, we understand each other better.

46. When I am understood better as an LPN my assignments are usually more of the nursing duties I am prepared to perform.

ROLE-STATUS FACTORS

47. Patients do not seem to know the difference between the RN and the LPN in nursing.

48. Patients frequently ask me when I am going to finish nursing and become an RN.

49. The Doctor does not seem to know what the LPN can do because he often asks me to do things for which I am not prepared.

50. Often when there is a shortage of RNs I am asked to do RN duties--the next day when there is no shortage I do LPN duties.

51. The LPN seems to have less status in hospitals because other personnel do not know her position in nursing.

SATISFACTION FACTORS

52. The LPN position enables me to stay close to the patient and give care at the bedside.

53. Because the LPN's position is primarily at the bedside I get great satisfaction from giving care to individual patients.

54. Even though the LPN's position does not offer advancement in nursing I find it interesting work because of the patients and their needs.

55. I like to feel that I am being paid an adequate salary for the important work I do.

56. I am not able to do my work as well because my work hours are changed so often that I am seldom sure of a week's schedule.

57. When the hours I work can be integrated with my home responsibilities and preferences I can do better work.

58. I learn about adjusting to sickness and problems from observing many of the patients I take care of in the hospital.

59. I do a better job when I work with friendly, cooperative co-workers.

60. I am a better LPN when I work in a hospital which accepts me as a contributing person.

APPENDIX J

TABULATED RESPONSES OF 70 LICENSED PRACTICAL NURSES TO 60 ITEMS REGARDING FACTORS WHICH AFFECT PERFORMANCE

Item No.	Number of Responses				
	Very Much	Much	Average	Very Little	Hardly at All
Physical Factors					
1.	18	22	24	4	2

What About Careers for Youth Who Do Not Plan to Continue Their Education Beyond High School. Occupational Research Series No. 2.

Wisconsin State Employment Service, Madison
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Feb66 42p.

*EMPLOYMENT OPPORTUNITIES; *OCCUPATIONAL GUIDANCE; *OCCUPATIONAL INFORMATION; *NONCOLLEGE PREPARATOPY STUDENTS
WISCONSIN

The purpose of this booklet is to acquaint school counselors and teachers with the major occupations providing increasing opportunities for the non-college bound youth. Duties, employment outlook, advancement possibilities, and qualifications are given under the headings of (1) Automobile Mechanics, (2) Automobile Service Station Attendant, (3) Building Trades, (4) Drafting, (5) Fire and Police Protection, (6) Food Service, (7) Occupations Gardening and Landscaping, (8) Health Services, (9) Labor, (10) Machine Operators-Skilled and Semi-skilled, (11) Office Occupations, (12) Public Contact and Sales Work, (13) Repair Work, (14) Sewing, (15) Supervisory Occupations, (16) Truck Drivers, (17) Welding, and (18) A Career in Government. (PS)

Introduction

Great emphasis is currently being placed on directing high school students toward college education, and admittedly the nation needs many well educated people. But what about the thousands of young people who will not go to college? What kind of preparation should they have in light of the opportunities that are open to them?

School counselors and teachers are often perplexed by these questions. Because of changes in technology and the rural to urban migration, there are no simple answers. New occupations, obsolete occupations, emerging occupations, declining occupations -- all suggest change.

The purpose of this booklet is to attempt to acquaint school counselors and teachers with the major occupations providing opportunity for the non-college bound youth. Understandably, too, it is difficult to speak authoritatively about certain specific occupations, since they are particularly subject to change. However, we can talk about occupational trends in the near future. For example, the need for automobile maintenance will continue for some time; therefore the demand for automobile mechanics is expected to be sustained. The nature of the work which mechanics perform, however, may change considerably.

The occupations listed were selected from two WSES research studies -- the Milwaukee Job Vacancy Study and the Wood County Occupational Needs Census, and were verified by an Unfilled Openings Survey of all 26 Wisconsin State Employment Service offices. Occupations chosen are those in which the number of opportunities are expected to increase and, more importantly, those which provide opportunity for the high school graduate to get a start without going to college.

A Word to the Counselor

It is impossible to overemphasize the importance of developing good work habits and attitudes in early life. Schools serve not only as a means for providing knowledge, but also as a training ground for character. The trend in this direction is assuming more and more importance as the time students spend in school increases, and (as is happening in some areas) parents abdicate this responsibility.

In this sense it is quite important that students be taught and reminded of certain basic facts of economic life:

1. Their school record is important--including attendance. Employers will refer to it for many years to come as an indication of probable achievement, as well as reliability on the job. (Will he show up for work every day--or will he be inclined toward absenteeism or tardiness?)

2. Personal appearance is very important. Duck-tailed haircuts, leather jackets and boots are not indicative of the stability and seriousness of purpose which most employers seek in job candidates.

3. Many students disdain jobs, work, and good attitudes. What they don't disdain is money, though, and it is sometimes necessary to point out the connection.

4. Because of the comparative scarcity of "good" jobs and the great numbers of workers available, it is often necessary to compete--this means selling one's self. Employers talk to many applicants and consequently often become very selective. The individual who stands out because he is neat, friendly, and attentive is most often the one who will get the desirable job. It is only natural for any employer to want to surround himself with pleasant, cooperative and alert workers, who are not apt to cause problems.

5. What has been learned in school is only a start. Almost every job which will ultimately pay a good wage will involve further training, either on the job or during night school. Because our society is becoming increasingly more technical,

this will always be the case in the future. The days of high-paying, low-skilled jobs on assembly lines are just about gone.

6. The importance of achieving success on one's first job cannot be overstressed. Poor references--which can follow someone all over the United States these days, with modern communication methods--can spoil the chances of ever getting good jobs in the future. Even if the first job is menial and the wages are low, a young person should try to succeed so that success becomes a pattern, rather than failure. A poor job may be a stepping stone to a much better position with the same company. Also, it will be far easier to get succeeding jobs with favorable references rather than with a sad story of failure; employers who are seeking workers to fill good jobs want to hire those who have succeeded in the past, not those who have failed.

Nor does it help a young person to "run down" a job where he has failed: he is really running himself down in any attempt to excuse failure. He will impress an employer far more by admitting failure and by making an effort to learn from the experience.

7. Some firms prefer not to hire those with military obligations, because of the expense involved in training. It is often wise to encourage students to fulfill their military obligations before seeking a job. This is particularly true of the vocationally undecided student, and there is often the additional hope that he may mature and "find himself" while in service, and become vocationally oriented toward a particular field.

8. Particular firms do not always have job openings, even in shortage occupations. Your local WSES office can often be helpful in supplying current information on job openings.

9. It still helps to know someone--to get an interview. It does not guarantee a job, however.

10. While unskilled jobs may be plentiful at this time, many unskilled young workers can expect to be dumped back on the labor market in the next economic "recession" unless they have proved their usefulness or developed a skill.

11. Competition is keen for the limited number of admissions to formal apprenticeship programs for the high paying skilled jobs. Yet many employers offer equally valuable training on-the-job: this should not be overlooked. Nor should any job be judged on pay rate alone--the important criterion is where the applicant will be ten or twenty years from now. Sometimes the higher paying jobs involve frequent layoffs, whereas a lower paying job may eventually pay more money besides being more stable.

12. Post high school training in public vocational or private technical schools can give applicants a head start to jobs. Sometimes the training itself is not so valuable in itself as it is a demonstration of student interest in making a career in a particular field. Care should be taken, however, to avoid some private schools offering training of negligible value for high tuition fees. If in doubt about a school, consult the Governor's Educational Advisory Committee or your local WSES office.

Automobile Mechanics

The need for automobile mechanics is expected to increase rapidly during the remainder of the 1960's and in the longer run; thus it would appear that this field will offer excellent career prospects for high school graduates. It should be stressed, however, that considerable training is normally required beyond a high school diploma, and since changes are constantly occuring in the way cars are being constructed it will be necessary for mechanics to keep up to date through continual study.

Mechanics can be qualified to perform a wide variety of repair jobs on automobiles, or they can specialize in one phase of repair, such as front end work, tune-ups, automatic transmission repair, etc. Smaller shops generally need all-around mechanics while larger garages and new car dealers often employ specialists.

Several approaches are open to a high school graduate seeking a career in this field. On-the-job training is perhaps the most common, but is becoming less desirable from the employer's standpoint because of its haphazard nature. Pitfalls sometimes exist for the trainees as well -- sometimes they are hired as car washers and are never given additional training or advancement. Gradually the larger employers are instituting indentured apprenticeships or providing their own training (GM Institutes, etc.).

Another approach is through Vocational School training. Two choices are given here: a candidate can study either automobile mechanics or take a course in automotive technology. The latter course emphasizes the theoretical aspects of automotive mechanics rather than straight repair, and such an education would be more helpful to a person employed as a service writer, diagnostician, or salesman.

The Armed Forces through their service training offer still another approach, although many employers feel that while this type of training may be useful, it should be supplemented with additional experience and/or schooling.

Finally, many mechanics have worked their way up through employment in service stations. Again, this is often haphazard, and does not assure a person of ultimate advancement as much as a formal apprenticeship would.

Automobile Service Station Attendant

There are two general types of service stations at this time, and it appears that both types will continue to operate without destroying themselves through competition.

One type sells gasoline, oil, and a large number of accessories frequently not related to automobiles. This type of service station offers no repair service or maintenance facilities such as lubrication and oil changing.

The second type offers a wider variety of service such as tune-ups, electrical and ignition work, brakes, tires, the repair and replacement of various component parts and accessories for automobiles -- in short, often everything but automatic transmission repair, major overhauls, or body work. The more ambitious service stations may even offer these.

The first type of service station, while perhaps more limited in scope, nevertheless has reason for being. The underlying philosophy is one of selling gasoline to motorists, often at a lower price, while assuming that the dealers will provide whatever servicing the car may require. By concentrating on gasoline sales on a volume basis and spending little time on repair, these dealers frequently can sell gasoline for 2 or 3 cents a gallon less than their major oil company competitors.

The requirements for attendants in this type of service station are: alertness, a pleasant personality for dealing with customers, a moderate amount of mechanical ability so as to be able to check oil, water, and batteries in customers' cars, and the ability to add totals and make change readily.

The ability to memorize or to concentrate for short periods of time on the amount of gasoline a customer requests is a very important attribute; and surprisingly significant is the ability to forget this figure as soon as the customer leaves.

Some of these stations emphasize the sales of accessories, even to the extent of allowing a commission on the sale of various items. This requires a certain aptitude for sales, which is difficult if not impossible to evaluate.

Stations offering more extensive service frequently sell the major brands of gasoline and usually require far more in mechanical ability. Formal courses such as those offered by the vocational school or which may be conducted by the oil companies themselves are considered helpful. The oil companies often designate one of the larger stations in a city as their training center, and conduct on-the-job training sessions at this one location.

It is not impossible, however, for a young man to teach himself all that it is necessary to know by observation and also by careful study of the various manuals and diagrams oil companies provide for servicing of each model and year of automobile.

Since many more functions are typically performed in this latter kind of service station, the record-keeping is more complex and consequently more clerical ability is required.

High school courses of value to someone contemplating this occupation would include bookkeeping, speech, any related auto mechanics or shop courses, and mathematics.

Since jobs in both kinds of stations are necessarily out of doors, a moderate amount of physical stamina is required.

Building Trades

The building trades are expanding because of urban renewal, the desire for home ownership, and the booming construction of office buildings. Of two dozen or so building trades, six -- painter, plumber, pipefitter, bricklayer, operating engineer, and construction electrician -- have 100,000 workers or more each. All are expected to expand. Carpenters comprise nearly one-third of all building trade craftsmen in themselves.

The problem of seasonal fluctuations in employment, which once meant months of unemployment each year due to weather conditions, has been somewhat reduced by modern technology and new building techniques.

Construction trades exist in nearly every community in the country. Workers are employed mainly by contractors but many others work in industry, particularly manufacturing, where they perform maintenance work. Some craftsmen work directly for business firms or government agencies which have their own construction force. Others are self-employed.

Qualifications: Almost every construction trade is unionized and has an apprenticeship program. Applicants must generally be between 18 and 25 years of age, in good physical condition, and must have good manual dexterity. Company and union usually provide on-the-job training and some classroom work during an apprenticeship which usually lasts from 2 to 5 years.

Pay: Salaries are among the highest in the community, but because of periods of unemployment during inclement weather and winter, the annual wage level may not be quite as high as the hourly rate would imply.

Drafting

Duties: Draftsmen translate ideas, rough sketches, specifications, and calculations of engineers, architects, and designers into complete and accurate working plans.

Employment Outlook: Opportunities for draftsmen are good. Employment of draftsmen should continue to grow because of the increasingly complex design problems in modern technology.

On entering this occupation junior draftsmen assist experienced draftsmen in making drawings. This once meant starting as a tracer or copyist; however, with the introduction of newly developed drafting equipment and photo-reproduction of drawings there is less and less need for copyists and tracers. Therefore, junior draftsmen must be skilled enough on entering the field to make detailed drawings and simple calculations. They are then known as detailers.

Fields: The largest fields are architectural, structural, mechanical, aeronautical, electrical, marine, and topographical drafting. In Wisconsin because of the many tool and machinery manufacturers, mechanical drafting is the largest field.

Requirements: High school graduation with technical training in mechanical drawing, mathematics, and physical sciences is the minimum requirement. But the trend is to require some post-high school drafting training. It is suggested that high school graduates take at least one year of post-high technical school drafting courses to compete successfully. Vocational schools in 21 Wisconsin cities provide training in drafting.

Numerical and spatial aptitude, form perception, and finger dexterity are important. Neatness and accuracy are essential as well as liking for precision and detail.

Advancement possibilities are good. Extended on-the-job training and further technical education provide opportunity for advancement. Skillful draftsmen with creative ability can advance to well paying jobs as designers.

Fire and Police Protection

Federal, State and local governments are the main employers in these occupations, and Civil Service Examinations are generally required. Not only is a written examination required to test one's mental ability, but a strict physical examination is also a requirement. Both of these occupations are considered to be hazardous. The applicant generally must be taller than five feet eight inches, and his weight must be in proportion to his height. Agility, mental stability, and references are carefully scrutinized before hiring takes place. Generally 21 is a minimum age requirement.

The nature of police work requires that officers be in excellent physical condition, for not only must they be able to apprehend criminals, they must also be able to withstand inclement weather.

Policemen perform a variety of duties such as investigating crimes, reporting facts, directing traffic, patroling streets and attempting to prevent crime. In medium and small cities all of these jobs may be performed by one man. In large cities, however, the policeman tends to specialize and is responsible for only one job. Police work generally is learned by on-the-job training, but in some of the larger cities specialized classroom courses are offered where state laws and local ordinances are taught. Police recruits usually begin their career by walking the night beat to become familiar with the duties of a policeman, and also to become familiar with the area and the people within their territory. Weekend and holiday work is commonplace for policemen.

With the increase in population and the enlargement of urban communities, it is anticipated that the need for policemen will continue. There seems to be a high degree of interest in this field but the rigid qualifications eliminate many applicants. A high school education is usually all that is needed for regular police work, but if one intends to specialize or go into the FBI it is necessary to go to college. The high school student who plans to become a policeman

may find the following courses helpful: English, American history, civics and government, business law, psychology, sociology, physics, and especially physical education. Leadership in extracurricular activities such as clubs and organizations can be especially valuable experience.

Firemen have the responsibility of protecting the life and property of individuals within a given community. This occupation, like that of the policeman, is a relatively dangerous one. Hiring is usually done through the Civil Service process which means a written test as well as an oral examination. Firemen not only extinguish fires, they also teach fire prevention and are frequently called upon to administer emergency first aid. Firemen must possess physical stamina, and must also be alert and agile. Training for firemen is usually given on the job.

There is a great deal of interest in this occupation, but because of the mental and physical requirements many individuals are eliminated. High school courses which would be beneficial to firemen are English, civics and government, sociology, psychology, physics. Again, emphasis should be placed upon physical education.

Private employers: Employment opportunities also exist in large industrial plants, shopping centers, and department stores which have their own fire and security departments. Prior experience in the military police, public police, or fire organizations is often necessary.

Food Service Occupations

Few people realize that the food service industry is the fourth largest industry in the nation. There are over 500,000 food service establishments including both commercial and institutional food service operations in America. One out of every six persons working in retail trade is a restaurant employee.

Waitresses: Opportunities for waitresses are plentiful throughout Wisconsin, although relatively few men are employed as waiters.

In diners, coffee shops or short order restaurants the emphasis is on quick service without frills. A strenuous pace is often demanded. In the larger supper clubs the pace is a little slower but more efficiency and skill are needed to serve the customer. Usually owners of this type of restaurant demand experienced help. In larger establishments a hostess may make reservations and escort customers to their table.

Though the waitress and hostess are important, it is the chef or cook that makes the restaurant's reputation. Again, duties and pay differ according to the type of restaurant.e A large modern restaurant demands extensive training and some specialization which is provided in special vocational school courses and on-the-job training.

Training: On-the-job training is provided by many restaurants, especially the coffee shop type. Waitresses must be able to do simple arithmetic and should have a pleasant manner. Basic pay is not high, but tips (in better restaurants) more than make up for the low pay base.

To be a chef or dinner cook requires years of training at a vocational school and on-the-job. However, it is a well-paying, highly respected occupation. In fact, good chefs are so important that they can sometimes command salaries of $15,000 or $20,000 a year.

Positions a high school graduate could qualify for in restaurants:

Kitchen helper
Assistant baker
Salad maker
Sandwich maker
Assistant cook
Beverage worker
Waitress
Soda fountain worker

Bus boy
Bus girl
Waiter
Hostess
Porter
Dish machine operator
Food checker - tabulates bill

Positions requiring training and experience:

Restaurant manager
Chain executive
Personnel director
Training director

Menu maker
Merchandising supervisor
Chef
Purchasing agent

Students (especially men) interested in cooking should check the excellent training courses available through Wisconsin Vocational schools.

Gardening and Landscaping

The nursery business provides the opportunity to be outdoors much of the time and to work with nature. For this reason it appeals to many people. However, appeal does not guarantee a living. One must realistically consider the outlook in this industry.

Outlook: Many retail outlets have expanded their businesses to include sales of Christmas trees, fire wood, and other products in an effort to extend their activities all year around. Similarly, many landscapers do snowplowing for the same reason. Thus the prospects of long winter layoffs which used to characterize this business have been somewhat lessened. Furthermore, a solid future in the nursery business itself is clearly indicated by the trend toward suburban living and the leisure time in which to enjoy gardening, recreation, and outdoor activity.

Work Areas: There are several basic types of operations: wholesale, landscape, mail order, garden center, sales yard, and agency. Most people are familiar with the garden center which is a retail business specializing in the sales of plants, fertilizers, pesticides, etc. There are, also, mail order houses which sell plants by mail; wholesale houses which grow plants and sell to retailers; and sales yards, which are display and sales areas of plant materials for retail sales. Landscaping opportunities exist with commercial landscapers, government, large private firms, institutions, and private households.

Qualifications: As in many other occupations, high school graduates without training often must start at the bottom as laborers. Applicants should be moderately husky and must be in good health to withstand temperature changes. An interest in plants and flowers is helpful. With experience, workers can advance to gardener, florist, or foreman of a landscaping crew. Additional training may be necessary in some cases.

Health Services

According to a 1964 Wisconsin State Employment Service research project, health occupations will continue to experience greater growth during the 1960's than many other occupational groups, although most opportunities exist for girls. The report gave as reasons our expanding and aging population, our increasing health consciousness, and the rapid increase of expenditures (including Medicare) for expanded facilities and for medical research.

Health service occupations vary in duties and requirements, but most require an interest in providing care for the sick and injured. It should be noted once again that to advance and gain better pay and status, additional training is necessary. However, because of the great need for these skills there are usually low-cost training plans available. Furthermore, a young girl who gains these skills should be able to find work in almost any city in the country. This is particularily true of nurses.

Therefore, a student should consider the following occupations for interesting and challenging work.

Nursing aide

A nursing aide bathes and feeds patients, makes beds and cleans rooms and equipment. Aides are employed in hospitals, sanitoriums, and homes for the aged.

Training courses are short and frequently are provided by many of these institutions.

Licensed practical nurse (LPN)

A practical nurse usually takes and records temperatures, pulse, and blood pressure readings and gives prescribed treatments and medications.

Generally a year of training is required for licensing. Many hospitals offer this course at low costs. Vocational school courses are offered in nine Wisconsin cities

Dental assistant

Dental assistants prepare patients for treatment, hand instruments to the dentist, and sterilize them after use. In addition, they may serve as a receptionist, scheduling appointments and keeping books. Some dentists train girls who have taken a general business program in high school. (typing, etc.) The Madison and Milwaukee Vocational schools offer courses for dental assistants.

Physician's assistant

Receptionist, secretary, bookkeeper and nurse are combined in this occupation.

Formal training is offered in Madison and Sheboygan vocational school.

Medical laboratory worker

A laboratory aide or assistant checks supplies, sterilizes laboratory equipment, or may take care of the laboratory animals, and help with some of the testing.

Advancement to technician status requires two years or more of science courses at college level plus either 12 months training in an approved school for medical technicians or experience in an approved laboratory.

Medical X-ray technician

This technical specialist operates the controls of the x-ray equipment and puts the patient in position required for the picture. They are employed in hospitals, medical labs, physicians and dentists offices and clinics.

Training may be obtained in Vocational school or hospital schools. Training programs usually last two years.

Dental laboratory technician

Dental technicians make artificial dentures and orthodontal appliances. Most work in large commercial laboratories. Completion of a formal apprenticeship program is required. A high degree of finger dexterity is necessary for this occupation.

Labor

It is obvious that any repetitive job requiring no particular skill is a likely target for replacement by some form of mechanization or automation. It is for this reason that the total number of unskilled or labor jobs has decreased or only remained about the same while jobs of almost every other sort have been increasing in number.

Thus, while openings for laborers may be somewhat plentiful at this time, it should be kept in mind that some of them may disappear in time to come.

Nevertheless, there are laboring jobs which will never be automated--jobs in industries where production changes occur frequently, or jobs where the cost of automatic machinery would be too expensive to justify.

The type of positions available in the labor category are far too varied to describe except in very general terms.

Factory openings in general require versatility and manual or finger dexterity. Often the work will involve simple machine tending, assembly line work, packing and shipping duties, or the like. Union jobs in general pay more although the larger companies which are most often unionized often have piece rate quotas and other production standards which must be met. In general, it is wise to try to learn to operate the more complex machines, or to work one's way into a supervisory position if possible, in order to avoid the possibility of a layoff. In general, too, it is best not to learn a skill that is not usable in more than one industry.

Construction jobs have the disadvantage of involving outside work and consequent seasonal layoffs, although the pay is generally quite high because of construction unions. Hiring in urban areas is most often done through the union hiring halls, and an initiation fee of up to $75 or $100 is sometimes required. (This need not be

paid immediately, but can be deducted from the first few weeks paychecks.) In the construction field it is very common for workers to change employers frequently, as employers' needs vary considerably from week to week.

The more fortunate laborers are those who have a chance to learn how to operate heavy equipment (bulldozers, back-hoes, scapers, etc.) or who are accepted for one of the formal apprenticeships--carpentry, electrical, sheet metal, plumbing, etc. With advanced skill the rate of pay increases and the chance of layoff decreases.

Qualifications are difficult to discuss in view of the variety of job openings; however, most employers prefer high school graduates who have good finger and manual dexterity. This is most easily developed in shop courses or do-it-yourself hobbies. Mathematical or numerical aptitude is particularly important in the apprenticeable occupations.

The larger companies often look for applicants with the education and aptitude to perform skilled work, so that they can eventually advance into higher level jobs with additional training and seniority.

Machine Operators - Skilled and Semiskilled

As the midwest became more industrialized and the number of people employed in manufacturing exceeded those working in agriculture, large numbers of workers found steady employment operating machines in factories. To help meet a tremendous demand which once existed for workers, people also were imported from foreign countries.

However, the long term future of jobs for machine operators is somewhat uncertain. While the demand for machine operators is strong at this time, automation will probably have severe implications for the future. Automation appears to eliminate many of the routine positions such as milling machine, drill press, and lathe operators while simultaneously creating an increased need for highly skilled set-up men, maintenance mechanics, machinists, and parts programmers.

Where the former occupations seldom required an extensive amount of skill--an operator could learn his function in a few months or less--the newer demand is for operators capable of setting up their own machines, reading blueprints and micrometers, and communicating on a high level. Implicit in these occupations is an involved training program or apprenticeship lasting four years or more with additional training required periodically afterwards.

Many of these jobs entail familiarity with several areas of knowledge; for example, the modern all-around machinist often has to know something about hydraulics, electricity, and electronics as well as strength of materials and modern machinery methods.

Requirements: A high school education is usually required for even the more routine positions. Because of union seniority rules, hiring for higher level jobs is largely through promotion, so employers tend to hire only those applicants who have the qualities needed for promotion.

Employers prefer applicants who received good grades in high school shop, mathematics, blueprint reading and English courses. Vocational schools in 39 Wisconsin cities provide machine shop courses, and most of the larger companies offer on-the-job training and apprenticeship programs.

Some jobs are open to women in light manufacturing, such as electronics, small machinery and appliances, ball bearings and instruments. Often women are able to perform this kind of work better because women tend to have better finger dexterity and are able to perform the more monotonous jobs. However, many of these more routine, repetitive jobs are also gradually disappearing with the introduction of automation.

Office Occupations

Typists and Clerks

Probably no other skill is so valuable to young women - and young men - as the ability to type. An overwhelming proportion of clerical positions received by the Wisconsin State Employment Service require typing ability, and although virtually every high school in the state offers courses in typing there are still not enough graduates with this training to fill all of the available openings. Job openings are so plentiful at this time that an average typist can expect to be offered a job after only three or four interviews.

Despite the recent trends toward office automation, the demand for qualified typists will remain strong for some time to come. When applied, automation eliminates the routine repetitive typing and often generates more varied work. Consequently, a typist must be able to work with varied formats, often setting up the form herself.

A young girl who has just graduated from high school will normally work in the secretarial pool of a large company, or will start out by doing routine work for a smaller company, until she has the experience necessary to move up into a more responsible position. Her duties will probably include filing, sorting mail, answering the telephone and running errands as well as typing - hence many of these jobs are known as clerk-typist or clerk general office positions.

Qualifications - In addition to the normal commercial courses it is particularly important that girls be able to spell and have some knowledge of the use of a dictaphone. Neat appearance and good work attitudes are particularly important since almost all jobs involve working with professional or managerial supervisors. References are also important; most employers consult with a student's commercial teacher before hiring.

Tests - The Wisconsin State Employment Service in conjunction with the State Bureau of Personnel conducts tests (clerical aptitude, typing and shorthand) throughout the late spring in most of the high schools throughout the state. These tests, which are usually arranged by the high school commercial teacher, will qualify girls for state civil service openings without further examination, and many private employers also rely heavily on these test results. Civil Service application blanks are passed out at the time of test administration. Any senior who is enrolled in a commercial typing course will be notified of the test schedule; other girls who wish to take the test should make arrangements with the commercial teacher to be included in this program.

Note: Typing ability is also valuable for men, but less emphasis is placed on speed. Keyboard familiarity is usually required for such jobs as shipping clerk, (to type shipping labels) or order clerk. For jobs requiring extensive typing, girls are more often hired.

Young women and young men who plan to attend college will also find typing ability valuable for their own personal use in typing term papers and notes, and it is also particularly helpful when looking for part-time or summer jobs.

Stenographers and Secretaries

Although there are many openings for girls with shorthand training, the majority of them do not involve a lot of responsibility at the starting level. Young girls just out of high school are most often assigned positions in stenographic "pools" to start, and only after company executives become familiar with their capabilities are they assigned to more responsible jobs.

Many of the younger executives prefer to use dictating machines, whereas the older men who have been accustomed to stenographers prefer them. This being the case, it is often a disappointment for a young girl not to be able to use her shorthand right after graduation; however, she should keep up her facility because it will become useful as she gains in maturity and seniority.

Very high level secretarial positions can normally be reached only after extensive business experience and familiarity with a given company. At this stage a secretary is given responsibility for handling every day matters in the absence of her supervisor and often is asked to write routine letters and to make minor decisions.

Office Machine Operators

Data processing has become a very important aspect of modern business, and the introduction of mechanized equipment has caused many radical changes which affect jobs for young high school graduates. Although there is a great deal of glamour and prestige connected with occupations in this field, the total number of job openings is not as great as people are led to believe.

Larger companies and banks no longer require large numbers of girls to operate calculators and bookkeeping machines since these functions have been taken over by electronic data processing (EDP) equipment. Instead, they are looking for key-punch operators to punch the cards used to feed information into tabulators and computers. While the need is quite extensive for girls with key-punching background right now, optical scanning machines have been invented which will eventually replace much of this function. In the meantime, girls can prepare themselves for a career in key-punching by taking a vocational school course or by being trained by an employer. A two-week training period is usually all that is required for a good typist.

Many small companies which cannot afford EDP equipment still use bookkeeping machines and calculators, and there is still some demand for experienced operators of these machines although the demand is expected to eventually decline.

Opportunities for men without additional schooling are somewhat limited in this field. A further discussion of occupations in the data processing field is included in "What About Data Processing in South Central Wisconsin?," available free from the Wisconsin State Employment Service.

Public Contact and Sales Work

Occupations in the distribution and sales of goods are becoming increasingly important with the result that for the first time in history more people are involved in the selling and distribution of goods than in their manufacture.

The sales function in particular is important. Not only must a good salesman have the ability to meet and deal with people, but he must also know product lines and specifications so as to be able to recommend particular items to meet his customer's requirements. This emphasis on product knowledge often distinguishes the better jobs from the average positions, and frequently also determines salary levels. For this reason it is best for a beginner to sell a product which he is interested in and can believe in--many sales careers have been ended abruptly because of the wrong choice of item to sell. Enthusiasm is one of the few identifiable qualities which make a good salesman; unfortunately, there are no aptitude tests which can measure "salesmanship" in general with any great accuracy.

Becuase of the wide variety of selling positions, it is often difficult for a young high school graduate to make a choice. In an attempt to focus his interests, a young man should decide if he wants inside or store sales or outside sales, what nature of product or service he would like to handle (tangible or intangible), whether he would prefer wholesale or retail selling, if he wants to sell on a commission basis, draw against commission, straight salary, or salary plus commission, and how extensively he may wish to travel. A job requiring extensive travel may involve the purchase of a relatively new car or the employer may furnish one, depending on the company. Some sales jobs may involve evening and weekend hours which may conflict with family life; this should be considered by the candidate.

A recent high school graduate without sales experience should observe several precautions:

1. Avoid employers who pay on a commission-only or draw-against commission basis.

Avoid the more glamorous but risky jobs until you have gained experience in the sales field and have a successful record to fall back on.

2. Do not spend your own money for an expensive sample case; this is normally furnished by any reputable employer.

3. Avoid the purchase of a new or late-model car until you have worked long enough to know you can be successful in your job.

4. Try to land a job with a well-known firm: their products will be also well-known and thus easier to sell.

5. Many store sales jobs which may start at low pay can advance into retail management positions or buyers jobs. These jobs may be desirable for a candidate who is seeking a stable job with regular hours and limited travel.

Preparation - No specific academic course is necessary, but courses in speech, typing, and psychology are helpful. Bookkeeping and mathematics are particularly important, as even the jobs in variety (five and ten cent) stores require the ability to figure rapidly (i.e. what is ¼ of a yard?) and to make change.

Most important, obviously, is the initiative and resourcefulness of the individual, which can be best determined by self-examination.

Repair Work - (other than automotive)

A subject as broad as this category is difficult to discuss and even more difficult to reduce to generalizations, except to point out certain similarities and broad aspects for consideration.

The one requirement that brings the various kinds of repair work together in this occupational grouping is the ability to properly handle a large variety of hand tools such as might typically be found in the Better Homes and Gardens, Handyman's Guide, Popular Mechanics, or in similar publications.

Our world is becoming increasingly technical in its orientation. Not only in factories and industrial establishments, but even in the home one finds gadgets and sophisticated mechanisms which exceed the ability of the average do-it-yourselfer to repair. Ironically, many youngsters are entering this increasingly technical world without even elementary ability to work with hand tools. Thus they are unprepared for numerous employment opportunities. It is apparent that the demand for qualified repairmen will continue to increase in the future. The only limitation to this will be in terms of those items whose cost of manufacture is less than the probable cost of repair. For example, it is obvious that a new toaster should be purchased if it would cost more to repair the old one.

There are, however, countless pieces of mechanical, electrical, and electronic equipment which are not so easily replaced and which require a high degree of skill to repair. Home laundry equipment and other major appliances, oil burners, and electric motors are typical pieces of household equipment which are usually more economical to repair than to replace.

Outside of the home there is an endless variety of mechanical equipment which requires frequent maintenance and occasional repair. The entire field of office equipment, for example, is one which has been increasingly mechanized, yet the

supply of repairmen is far from adequate, partly because most manufacturers attempt to hire trainees whose personal appearance would be in keeping with an office setting, and who might be capable of selling new equipment as well.

Employers in industry are also becoming increasingly aware of the forthcoming shortage of qualified factory maintenance mechanics and millwrights. It is apparent that with the current trend in industry toward automation, more of these skilled workers will be needed to set up and repair the complicated machinery which is designed to replace men. While this occupational area often requires an apprenticeship, the high wage levels tend to make the completion of an apprenticeship program most desirable for mechanically inclined high school graduates.

Telephone linemen will be in increasing demand, as will elevator installers, locksmiths, air conditioning and refrigeration mechanics, and diesel mechanics.

Many of these areas are quite lucrative and most of them will increase in importance in the next few years. Any high school student who is mechanically inclined would do well to consider any of these areas of repair work if he does not contemplate further schooling or an apprenticeship.

The question arises - what can high schools do to prepare their graduates for employment in the repair field? The previously stated need for training in the use of a large number of basic hand tools is the most obvious. Except for those occupations which are included under apprenticeship programs, much of the formal training is done by the manufacturer or user of the equipment, or by vocational schools.

Some valuable high school preparatory courses include auto mechanics or shop courses, mathematics, elementary bookkeeping or record-keeping, and communications skills. A course in physics, if it relates to the practical or applied side of physics more than the theoretical, would be particularly useful, especially if electricity, electronics, hydraulics and pneumatics are included.

Sewing

Although most of the apparel industry is located on the east coast, Wisconsin has a number of apparel firms, many of which are located in Milwaukee.

Opportunities exist for power sewing machine operators in many of these companies, and interested girls can usually find job openings which do not require previous experience. Employers prefer to hire workers with good finger and manual dexterity, good eyesight and color discrimination. Frequently aptitude tests are given by the employer to determine if workers are qualified for this kind of work.

Work in garment factories was once considered undesirable, but working conditions have improved and modern equipment tends to make the work more pleasant. Wages, however, are often comparatively low; a WSES wage survey recently revealed that the average Wisconsin employer pays $1.38 perhour starting wage for trained personnel. Exceptions are those firms which make automobile upholstery and companies having piece work rates, where the worker is often able to earn a considerably larger income.

There are no specific educational requirements, although high school or vocational training in home economics is often helpful.

Advancement channels often lead to positions as tailors, dressmakers, or alteration women.

A Note Concerning Supervisory Occupations

Straight supervisory positions, with no additional duties, are rapidly disappearing. The new types of managers, foremen, and supervisors all must have a thorough knowledge of the duties their subordinates are assigned, which usually presupposes that the manager be employed in a "line" or functional capacity before becoming a "boss".

Thus, the requirements for office managers usually include experience in acoounting so as to be able to supervise bookkeepers and other accountants. A carpenter foreman's position requires extensive experience in carpentry, etc.

To a great degree the supervisory positions require maturity and experience as well as tact in dealing with other employees, which can only be acquired by several years of employment. This again would tend to preclude recent high school graduates from consideration for these positions until they have gained experience. Obviously, few older workers will take directions from a much younger person with little or no experience.

Therefore it is not practical to discuss supervisory opportunities without considering the fields of work through which one must progress to reach the supervisory level. However, some training in human relations will benefit students as they progress to supervisory levels in any of the occupational groupings listed in this publication.

Truck Driver, Light
Truck Driver, Heavy
Trailer-Truck Driver

(Similar occupations: Routeman, Dump-Truck Driver
Taxicab Driver, and Bus Driver)

Skilled and courteous drivers are in demand at this time, and in all probability will continue to be needed for some time in the future by the many industries which use trucks of all sizes and descriptions to transport a virtually endless stream of goods.

Frequently driving under the handicaps of bad weather, heavy traffic, or poor roads, the average driver must possess skill, good judgment, and a sense of responsibility. In addition, many drivers are asked to keep involved clerical records and occasionally load or unload their vehicles.

Beginning level jobs are not always easy to find. Employers frequently try to hire drivers over 21 or even over 25 as they feel that added maturity and experience is important. Higher insurance rates for younger drivers tend to strengthen this practice.

Typically, a young man just graduating from high school can often start out by driving a light delivery truck or even a station wagon to pick up and deliver mail and supplies for a large office, or to deliver groceries for a food store. Or he may work as a truck driver helper and learn gradually by moving the truck up to the loading dock or around the yard, and eventually make training trips with an experienced driver.

Obviously, the larger the vehicle, the more skill is required to handle it. Many of the larger trailer-trucks (semis) have several speeds forward with two-speed rear axles, necessitating rather complicated gear-shifting. In addition, driving regulations imposed by the state and federal governments have become complex.

A pamphlet prepared by the American Trucking Associations, Inc. outlines some of the restrictions for semi-drivers:

> There are many Federal and state regulations, in addition to company requirements, regarding truck driving. . . For instance, the minimum age and health requirements for truck drivers engaged in interstate commerce are specified by the Interstate Commerce Commission (ICC). Minimum age required by the ICC is 21 years. Many trucking companies prefer drivers over 25 years of age, because they feel this added maturity is important in such a demanding, responsible job as truck driving.
>
> Minimum physical standards are that you must be able-bodied, possess at least 20/40 eyesight in each eye, with or without correction, and have at least 10/20 hearing. Additionally, you must not be addicted to the use of liquor, narcotics or any habit-forming drug. These requirements must be met in your original physical examination and thereafter at least every 36 months.
>
> You must have at least one year's driving experience in any type of motor vehicle, and must have sufficient skill--through experience or training--in the type of vehicle you will be operating. (The latter stipulation is often obtained through company-sponsored training).
>
> There are restrictions against the employment of criminals, accident-prone drivers, and those who have demonstrated disregard for regulations and for the public safety.
>
> Drivers applying for jobs with companies engaged only in intrastate transportation generally are not technically required to comply with ICC requirements but they must meet the similar minimum requirements necessary for a commercial-type driving permit in that particular state. Information on these can be obtained from the State Motor Vehicle Department.

Drivers for companies in intrastate commerce (operating in one state only) must be familiar with that state's motor vehicle laws governing the operation and driving of trucks. If you work for an interstate carrier (operating in more than one state) you must know not only the laws of the states through which you drive but also the ICC safety regulations regarding truck driving. Information on these may be obtained from State Motor Vehicle Departments and the Interstate Commerce Commission, respectively.

In every case, individual companies can, and quite often do, require more stringent qualifications. Many put each applicant through their own physical, mental and psychological tests.

Earnings for truck drivers depend upon the mileage driven, number of hours worked, type of equipment driven and weight of the loads carried, and the type of "run"--for instance, whether pickup and delivery enroute also is required.

High school graduates seeking a career in this field should be made aware of the importance of driver education courses and the necessity of keeping their driving record free of violations. Revocation of a driver's license will almost preclude consideration for any over-the-road driving job.

High school courses which would be of value, in addition to driver education, include auto mechanics, bookkeeping (especially helpful for advancement into dispatcher positions), and speech (if candidate wants to consider route work or bus driving).

Physical qualifications include manipulative skill (hand-eye coordination) and judgment of distance. Desirable aptitudes, aside from driving ability, include average intelligence, numerical and verbal ability, and clerical aptitude.

Welding

The current outlook for welders is good. The use of welding for joining components of assembled or erected products has increased. Welding is also replacing riveting in structural steel construction.

In the present economy (February 1966) welders are in demand. However, as with other occupations welding is being affected by changes in technology.

Gas-shielded arc methods appear to be rapidly growing in importance. Gas welding continues to be a significant source of employment but shows no relative growth. And presently, the use of numerical-control (N/C) for welding purposes is limited only by time and money.

The significance of the new technologies (gas-shield arc, numerically controlled welding machines, etc.) is that welders must keep up with the times by learning new welding techniques as they are devised. The shop worker with good experience or training in pertinent procedures and practices of the manufacturing process will most often be the person chosen for the new responsibilities and the new opportunities brought on by the new technology (i.e. more than one half of the parts programers have come up from the shop and the same can be expected for N/C welding).

Qualifications: In times of prosperity employers are more willing to train the unskilled when they need skilled workers. However, if those with training are available, they are chosen over the inexperienced high school graduate. Basic shop courses and even short-term vocational training increase the possibility of getting a job as a welder.

Skill: Welders possess a skill and if they continue to learn the new methods and techniques, they need not fear change.

Jobs for welders exist throughout the state paricularly in the south-eastern section of the state where many metal-fabricating plants are located.

A Career in Government

Many of the same occupations found in private industry are also found in government, and since the government is the largest employer in the state, it should not be overlooked as a potential source of jobs.

A civil service examination is often required for some jobs, and for federal civil service positions a physical examination is sometimes necessary. However, there are many jobs for aides, guards, kitchen workers and maintenance help which do not require examination.

For help in applying for federal jobs, inquire first at your local post office. If you have a federal institution (hospital, laboratory, etc.) in your city, apply directly to the institution also--most of them have personnel departments and can hire directly.

If you are interested in state civil service jobs, information is available from the Bureau of Personnel, Room B-135, 1 West Wilson Street, Madison 53702. Your local WSES office also has listings of state jobs. Again, if there is a state institution near you, be sure to apply directly as many openings are filled without the examination requirement.

Girls interested in clerical jobs with the state should be sure to take the test which is given jointly by WSES and the State Bureau of Personnel to graduating seniors in most of the high schools in the state every spring. The results of this examination will qualify you for a state typist or steno position without further examination. If you miss this test or if it is not administered in your school, contact your nearest WSES office to make alternate arrangements, as this test can also be taken throughout the summer.

Not to be overlooked are the many openings with local city and county governments. To apply for these check with your local city hall or county courthouse, and watch your newspaper for advertisements in the help-wanted columns.

BIBLIOGRAPHY

The following list contains a few of the many available publications which can help to prepare a student for the transition from school to work.

PAMPHLETS:

U. S. Department of Labor, Bureau of Employment Security, Career Guide for Demand Occupations, Washington, D. C., U. S. Government Printing Office, 1965. (Cost - $ .30)

U. S. Department of Labor, Bureau of Employment Security, Choosing Your Occupation, Washington, D. C., U. S. Government Printing Office, 1962. (Cost - $ .15)

U. S. Department of Labor, Bureau of Employment Security, How to Get and Hold the Right Job, Washington, D. C., U. S. Government Printing Office, 1964. (Cost - $ .10)

U. S. Department of Labor, Bureau of Employment Security, How to---Prepare Yourself for Job Interviews, Washington, D. C., U. S. Government Printing Office, 1965. (Cost - $ .10)

U. S. Department of Labor, Bureau of Employment Security, Job Guide for Young Workers, Washington, D. C., U. S. Government Printing Office, 1963. (Cost - $ .45)

U. S. Department of Labor, Bureau of Labor Standards, Handbook for Young Workers, Bulletin 271, Washington, D. C., U. S. Government Printing Office, 1965. (Cost - $ .20)

U. S. Department of Labor, Women's Bureau, Future Jobs for High School Girls, Washington, D. C., U. S. Government Printing Office, 1965. (Cost - $ .30)

Cole, Sonia M.
Suggestions Pertaining to Space and Equipment for Post High School Technical Programs.

Ohio State Dept. of Education, Columbus. Div. of Vocational Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Mar66 9p.

*OCCUPATIONAL HOME ECONOMICS; *FOOD SERVICE OCCUPATIONS; *TECHNICAL EDUCATION; *EDUCATIONAL EQUIPMENT; *CHILD CARE OCCUPATIONS

A list of space and equipment needed for two post-high school technical programs in home economics is presented. The suggestions for the 2-year program in child care technology are based on course work in classroom and laboratory with emphasis given to the nursery school. An estimate of $4,500 for equipment does not include the cost of fixed equipment. Suggestions for space and equipment for technical programs in food service are based on the student's preparing for supervisory and managerial positions in several areas of food service. The cost of specific food service equipment listed is estimated at approximately $37,000. (MS)

March 31, 1966

TO: State Supervisors of Home Economics Education

FROM: Sonia M. Cole, Assistant State Supervisor, Vocational Home Economics
State of Ohio

SUBJECT: Suggestions pertaining to space and equipment for post-high school technical programs

The enclosed information regarding suggested space and equipment for post-high school technical programs complies with requests of participants made at the National Clinic held by the U. S. Office of Education in Chicago, Illinois, in January 1966.

There are many variables which must be considered when recommendations are made; therefore, please do not consider the space allotments or the equipment estimates as "set" figures. In establishing our Food Service Technology and Child Development Technology programs, advisory board committees gave much assistance in determining space and equipment needs.

I sincerely appreciated having the opportunity to share ideas and materials with supervisors from other states during the Chicago meeting. I hope the enclosed materials will be beneficial to you as you optimistically face the new challenges and changes in Home Economics.

U.S. DEPARTMENT OF HEALTH, EDUCATION & WELFARE
OFFICE OF EDUCATION

THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY.

OHIO'S

Suggested Space and Equipment
for
Two-Year Technical Programs in CHILD DEVELOPMENT

Area: Child Care Technology

Description:

Students majoring in Child Care Technology follow a sequence of class and laboratory experiences designed to increase the student's understanding of young children, their care and education. Emphasis is given to the organization and teaching in a nursery school.

Employment Opportunities:

There are opportunities for teachers in private and community nursery schools, day care centers, neighborhood centers, as well as counselors in children's homes and institutions for exceptional children. A pediatric ward offers opportunities for placement of students who are interested in hospital positions.

Space:

Outside Play Area	-	2,400 square feet with slightly more turf than paved area (fenced area).
Inside Nursery School Play Area	-	minimum 35 square feet per child excluding storage and food preparation area.
Observation Area	-	750 Square feet with a one-way vision mirror that gives full view of the nursery school.
Related Classroom	-	900 square feet with Q-Space for individual or small group study.
Toilet Area	-	150 square feet with toilets and wash bowls child size. Include mirrors over wash bowls at child's eye level.
Kitchen Area	-	200 square feet
Isolation Area	-	50 square feet
Toy and Play Material Storage Room	-	175 square feet
Office	-	150 square feet

Supplies and Repairs/year - approximately $1,500.

Cost of Nursery School Equipment - approximately $4,500.
(Fixed equipment which follows is not included in this estimate)

SUGGESTIONS FOR FIXED EQUIPMENT IN A CHILD CARE TECHNOLOGY PROGRAM

Item	Specifications
Sound moni-toring device for Observation Room	
Ledge for students use in recording observations	Placed under 1-way vision window
Sound-proof ceilings	
Carpeting in Playroom	
Lockers for children's coats, etc.	
Bookcases and low shelves for children's toys, books, etc.	
Continuous panels of one-way-vision glass	30 inches in height and full length of Observation Room
Folding doors to separate Observation Area from the rest of the classroom if rooms are not separate	
Adequate lighting	
Adequate ventilation	
Low sink near door to outside play area (can also be used for mixing paints, etc.)	
Toilet facilities for children	
Built-in storage cabinets	
Kitchen sink	
Kitchen dishwasher	
OUTSIDE PLAY AREA	
Shed for storage of equipment	
Pavement	
Fence around the play area	
Wide tricycle walk area that goes around the area in a circle so there are no right angle corners	

OHIO'S

Suggested Space and Equipment
for
Two-Year Technical Programs in FOOD SERVICE

Area: Food Service Technology

Description:

The Food Service (Dietetics) Technology program is open to both men and women who have interest and aptitude in managing food service facilities. It is designed for the student preparing for supervisory and managerial positions in the several areas of food service.

Instruction covers a comprehensive program of food preparation, purchasing, cost analysis and service. Class instruction is supplemented by field trips and practical work experience.

Employment Opportunities:

Hospital
- Assistant to the Dietitian
- Food Service Supervisor
- Food Production Supervisor

Civil Service
- Dietitian Assistant
- Food Service Manager

Industry and Other
- Food Supervisor
- Dining Room Supervisor
- Manager - Airline Flight Kitchen
- Lucheonette Manager

School Lunch
- Manager
- Cook-Manager
- Food Service Supervisor

Restaurant, Club, College
- Manager
- Assistant Manager
- Club Steward
- Food Supervisor
- Dining Hall Supervisor

Assistant to Director - Test Kitchen

Space:

Technical Foods Laboratory	- 1,440 square feet minimum
Dining Area	- 960 Square feet which will accomodate approximately 40 persons at any one time.
(Dry) Storage of Food Supplies	-200 square feet minimum.
Student Locker Room (Women)	- 300 square feet for approximately 25 students.
Student Locker Room (Men)	- 300 square feet for approximately 25 students.
Related Classroom	- 900 square feet
Office	- 100 square feet

Cost of Food Service Equipment - approximately $37,000.

Suggested Equipment List for Technical Laboratory	Specifications
1. Sinks and Drainboard (Disposer-Prep Tables Disposer Scullery Sink	10' x 2'6", rolled rim, end pitched to sinks Sinks - 24" x 24" x 16", stainless steel
2. Lavatory	Stainless steel
3. Food Cart (supply)	Breaks and on two casters
4. Hot Top Gas Range	Oven - 35" deep, exposed sides, stainless steel. Stainless, double deck shelf over 2'6" deep x 2'10" high in length as needed
5. SS counters (7) with cabinets below, 40' - 4 sinks	
6. Griddle Top Range	Exposed sides,stainless, oven, double deck shelf
7. Roast Oven	Two deck, exposed sides, stainless
8. Broiler	Exposed sides, stainless
9. Convection Oven	Exposed sides, stainless
10. Range and Oven Hood	Length depends on need
* 11. Water and Silver Station	2' water station 2' food warmer 2' shelf cabinet/drawer 4 compartment silver bin 6' shelves and paneling over
12. Freezer	Full door, stainless steel, completely automatic
13. Refrigerator	Full door, stainless steel, completely automatic
14. Cabinets	
15. Folding Chair Storage	
16. Disposers	1 at each Prep Table, Demonstration area, scullery sink 9' x 2'6" x 2' 10" high, Rotor Shaft
17. Demonstration Counter	
18. Stainless Steel Counter and Appliance Stand	
19. Charcoal Broiler	
20. Griddle	
21. Fryer	
22. Range	6 burners, 35" deep, exposed sides Stainless steel shelf

Equipment List for Food Service Technology Lab (Cont.)

23.	Table for Steamer	Length depends on need
24.	Jet Steamer	
25.	Steam Kettle	20 gallon
26.	Mixer	Stainless Steal Bowls
27.	Utility Carts	Bumpers and Brakes
* 28.	Hot Food Dish Cart	Heat in all compartments, three hot food wells
29.	Appliance Hood (over large equipment grouped together)	Stainless Steel - Length depends on need
30.	Wall Cabinets (Storage areas)	
31.	Work Table	6' x 2'6" x 2'10" high
32.	Demonstration Mirror	Attached to Demonstration Counter
33.	Medicine Cabinet with Mirror Over Lavatory	

* Necessary if food is to be served directly from the laboratory (Example: Faculty Dining Room)

PLEASE NOTE: This list is to be used only as a guide in selecting large equipment. Adjustments will be necessary with each laboratory since factors such as availability of money, space, public utilities and the distribution of the food prepared all affect equipment selection.

SUGGESTED CLASSROOM EQUIPMENT

FOOD SERVICE TECHNOLOGY

Equipment	Specifications
Chalkboard	10-12 lineal feet
Pegboard	8-10 feet
Tables	29"-30" height, movable, square corners, durable surface
Chairs	Stackable
Storage for Resource Materials (leaflets, pamphlets, etc.)	
Bookshelves	12" deep
File Cabinet for Records	4 or 5 drawer
Desk (teacher's)	
Desk Chair	
Utility Cart on Casters

*VOCATIONAL EDUCATION; *MANPOWER UTILIZATION; *CONFERENCE REPORTS; *WORKING WOMEN; MANPOWER DEVELOPMENT; EMPLOYER ATTITUDES; *FEMALES; LABOR UNIONS; SOCIAL CHANGE; LABOR LAWS
*CONFERENCE ON WOMEN IN THE UPPER PENINSULA ECONOMY; MICHIGAN

Highlights of addresses, panel discussions, and group reports on ways to develop and utilize the talents and skills of women to improve the economy of the Michigan Upper Peninsula are presented to summarize the conference. The conference, with 50 participants representing organizations concerned with the larger role of women in public and community life, was held at the University Center, Northern Michigan University, Marquette, Michigan, May 16, 1964. Conference presentations were: (1) The Upper Peninsula and Its Economy, and (2) The Changing Status of Women. Panel discussions topics were: (1) Women in The Upper Peninsula Work Force, (2) Training Programs for Women, (3) Counseling and Job Preparation, (4) Protective Legislation for Women Workers, (5) Employers' Attitudes Toward Hiring and Promotion of Women, (6) Organized Labor and the Women Workers, and (7) Women in Public and Community Life. Spokesmen for the employment commission noted that in the Upper Peninsula 22.5 percent of the unemployed were women. Manpower Development and Training Act and Area Redevelopment Act training programs enrolled 1,000 individuals, 240 of which were women. There were approximately 25,000 working women in the Upper Peninsula area or 1 out of 4 worked, while the national average is 1 out of 3 in the work force. Occupational opportunities for women are predominantely clerical, sales, service work, and professional because of the lack of manufacturing industries in the area. Employers seek women workers who are dependable, adaptable, flexible, honest, loyal, discrete, responsible, and who work well with others. Discussion groups recommended a local survey of employer needs, a program to elevate attitudes toward service occupations, the development of training programs for these service occupations, more counseling for young women workers, and improved communications. FOREWORD

This report summarizes sessions of the Conference on Women in the Upper Peninsula Economy held at the University Center, Northern Michigan University, Marquette, Michigan, May 16, 1964.

The conference was sponsored by the Michigan Department of Labor, Michigan Employment Security Commission, Northern Michigan University, and the Women's Bureau, U.S. Department of Labor.

We acknowledge with appreciation the efforts of the many individuals who helped plan the conference and those who participated in the program. We extend recognition to Northern Michigan University for providing leadership and for making the University Center available for the meeting.

The conference focused on ways in which the talents and skills of women could be developed and utilized to improve the economy of the Upper Peninsula. It also explored the possibility of larger roles for women in public and community life.

We believe that the formation of a continuing organization for the implementation of conference recommendations will contribute importantly to the achievement of goals established by the conference.

Organized Labor and the Woman Worker - Myra Wolfgang, Hotel & Restaurant Employees and Bartenders Union
2:00-2:45	Panel - Women in Public and Community Life Mrs. S. J. Bessolo, Past President, Michigan Federated Women's Clubs Mrs. Mildred Chamberlain, Governor's Commission on the Status of Women Mrs. Marie Hager, Member, State Legislature
2:45-3:30	Discussion Group Reports
3:30-4:00	Closing Session - Summary and Recommendations
4:00	Adjournment

CONFERENCE OBJECTIVES

1. To explore the overall status of women in the Upper Peninsula with a view to improvement.

2. To examine present training programs and to explore additional needs.

3. To examine existing wage structures for women and compare them not only with comparable jobs for men in the area but also with wage scales in other parts of the country.

4. To examine existing Federal and State minimum wage and equal pay legislation to ascertain whether revision is needed.

5. To establish a continuing organization for implementation of conference recommendations, perhaps related to the existing Michigan Council on Employment Problems of Working Women.

SUMMARY OF CONFERENCE SESSIONS

OPENING SESSION

After opening remarks and introductions by Mr. William E. Wright, Conference Director, Dr. Claud A. Bosworth, Vice President for Public Services, extended greetings on behalf of Northern Michigan University. He noted that the University was dedicated to the philosophy of helping people throughout the Upper Peninsula to lead more useful and satisfying lives. This was done in three ways: teaching, research, and public service. The public service programs included provision of facilities on campus for the kind of learning situation typified by the Conference on Women in the Upper Peninsula Economy. Dr. Bosworth expressed the hope that the participants might have an opportunity to learn some of the "how's and why's of leadership" so that they might assume a more important role in today's society.

THE UPPER PENINSULA AND ITS ECONOMY

Mr. Albert J. Gazvoda
Field Supervisor
Michigan Employment Security Commission

Discussing employment prospects in the Upper Peninsula, Mr. Gazvoda stated that expanded opportunities could be expected in the iron ore, copper mining, wood products, government, tourist, and other service industries. After 5 years with the average unemployment rate in the Upper Peninsula varying between 10.3 percent and 14 percent, current projections indicated that when seasonal workers returned to their customary employment the rate could be expected to drop to around 6 to 8 percent--with reasonable prospects that the annual average would be below 10 percent for the first time in many years. About 2,750, or 22.5 percent, of the unemployed were women. The best prospects for women's employment in the area appeared to be in clerical work, sales work, and service work with government and other expanding industries.

Mr. Gazvoda said that of the 1,000 individuals in the Upper Peninsula who had received various types of training under the Area Redevelopment Act and the Manpower Development and Training Act, 240 were women. About 90 percent of those who completed training were placed in jobs, with 81 percent employed in occupations using their

recently acquired skills. The total trained to date represented about 10 percent of the average unemployed work force in the area. Most of the training had been conducted at the site of and under the sponsorship of the two Upper Peninsula universities and junior colleges. Programs to train 1,200 additional persons during the following 12 months had been submitted or were being prepared.

Mr. Gazvoda said that the Michigan Employment Security Commission would continue to recommend training programs on an area basis, since experience had shown that the advantages of area training far outweighed the community concept of manpower training. He noted that when the society was simple in composition, answers to individual and community problems were correspondingly simple. Solutions to economic and social problems had to be found locally because there was no solution to be found elsewhere. Self-dependence was a necessity, a virtue imposed upon and developed by both individuals and communities.

Many factors and circumstances combined over a period of years to change this concept of self-sufficiency. Technological progress changes were important. Improved communications and means of transportation drew widely spread communities closer together. Coincident with these changes, the Upper Peninsula was fortunate in having dedicated individuals who united into groups with a common purpose of serving the entire area.

Mr. Gazvoda told the conferees that they must continue to chart their course toward a forward-looking, adventurous economic program that would benefit all the people of their great Upper Peninsula. He believed they had turned a corner.

THE CHANGING STATUS OF WOMEN

Mrs. Esther Peterson
Assistant Secretary for Labor Standards
U.S. Department of Labor

Departing from her prepared text, Mrs. Peterson chose to cite a specific example rather than discuss the "status of women" in general. On the way to the conference, she had met an "average woman" on the airplane. This woman was a mother in her early thirties who had dropped out of high school when she married very young. Then she became worried about not having an education and went back and earned her high school certificate. Thus she was typical of the half of the women in the United States who had finished high school.

Mrs. Peterson said that this wonderful, intelligent woman, facing up to the importance of educating her five children, took a beauty operator course so that she could work at least part time no matter where her husband's job required the family to move. In the Upper Peninsula she made only half as much as she had made in California, however; so she was very pleased that a State minimum wage law had been passed recently.

At this point Mrs. Peterson asked Mrs. Marie Hager to take a bow for her success in achieving this legislation, and she congratulated the groups who cooperated in the process. She said it was splendid that there were no exemptions from coverage.

Mrs. Peterson noted Mr. Bosworth's statement that the University was assuming an increasing role in providing facilities so that people could meet to solve community- or area-wide problems, and she cited the minimum wage law as an example of how responsible citizens in a democracy could bring about improvements through coordinated individual efforts.

Going back to her "typical woman," Mrs. Peterson said she was very impressed to hear how the children helped out at home. In fact, the mother said, there was a feeling of cooperation and partnership in the family that did not exist before she went to work. And in the same spirit she decided that since the community did so much for her she wanted to do something for the community in return; so she became a volunteer. Furthermore, she wanted to take some classes at the University to prepare herself in case she had to become the family breadwinner, but she was worried about entrance requirements. Mrs. Peterson said that this was where flexibility and the adaptation of educational institutions to meet community needs came into the picture.

After the woman's children were all in school, Mrs. Peterson said, she probably would have 25 or 30 years of constructive usefulness, and undoubtedly she would be happier if she felt she was contributing as well as receiving. Mrs. Peterson noted that half of the women in the labor force were married. A large proportion of these women had husbands whose low income made two paychecks necessary to keep the family going. A sizable part of the Nation's economy was being held up by the paychecks that married women were bringing home.

It is important, Mrs. Peterson said, for us to have a social climate where a woman has the choice of going to work for a paycheck or as a volunteer, or, if she prefers, staying at home. The volunteer can explore new areas of usefulness that are very important. Whatever a person does--whether it is for a paycheck or moving ahead to broad areas of usefulness as a volunteer--both are good. And maybe some woman feels that all she wants to do is be home and have her creative life there. And bless her if she does. There is no one pattern for all women.

There was, Mrs. Peterson said, a new kind of pioneering spirit--pioneering in the sense of providing a climate of opinion for new ideas and new ways of doing things, new ways of working together, new ways of absorbing new people in a community, and new ways of bringing all members of our society into participation. On the other hand, there were those who clung to the old patterns. The big plea for the day--and this was where the university came in--was for people to accept the fact of change, not moralizing about it as good or bad, and to see what they could do as part of a responsible society to help individuals make wise choices in this whole situation.

Mrs. Peterson mentioned the reluctance of some to accept change when Congress was considering the equal pay bill. That fight was won, but there were still areas of continuing concern to those seeking to advance the status of women: the provision of adequate day care facilities for the children of working mothers; assurance of educational facilities so that the armed services would not reject so many men because of near-illiteracy or physical defects; the big thing, getting the economy back on its feet; and generating the commitment and involvement that would help achieve the goal of "good human beings who can meet the problems of today, who can help their families and be secure within themselves."

For, said Mrs. Peterson, "if they are secure within themselves, we will be secure in the world."

Panel Discussion

WOMEN IN THE UPPER PENINSULA WORK FORCE

Miss Joyce Peterson
Michigan Employment Security Commission

Miss Peterson said that there was a tendency to shrug off labor force statistics and say that they really didn't have a direct bearing on lives in the Upper Peninsula. Such was not the case. Modern methods of transportation and communication had had the effect of shortening distance both in time and in space. The Upper Peninsula was no longer a relatively isolated, so-called backwoods area whose only concerns were her own woes. In fact, her problems had become the problems of the whole Nation.

Looking back over the past two decades, Miss Peterson said, her audience would not have much difficulty recalling events or inventions that had changed the character of civilization at all levels. Among the accomplishments that reached closest to women's realm were prepackaged foods, instant mixes, frozen foods of all varieties, pushbutton washing machines, drip-dry clothing, coin-operated drycleaning machines, remote control television sets, and a myriad of other laborsaving devices.

"And what has all of this to do with women in the labor force?" asked Miss Peterson. "It has a great deal. It means that women have more leisure time for extracurricular activities. It means that, because of this extra free time, women are becoming less satisfied with their roles as homemakers alone. It means that here in the Upper Peninsula, just as in all other parts of the Nation, more and more women are turning to activities outside the home to satisfy their personal desires for success and accomplishment."

Miss Peterson said that in 1940, when an average of 1 out of 4 women 14 years of age or over worked for pay outside the home in Michigan and in the United States as a whole, the ratio for the Upper Peninsula was 1 out of 5 1/2 women. By 1960 these ratios had changed to 1 out of 3 for the State and the Nation and 1 out of 4 for the Upper Peninsula. Although the labor-force participation rate for women consistently had been relatively low in the Upper Peninsula because of the nonurban character of the region, during this 20-year period the rate of increase there was faster than for the State and the Nation. The actual number of available jobs for women in the Upper Peninsula increased by 7,300, while jobs for men declined more than 23,000. Thus, although the total civilian labor force in the Upper Peninsula declined more than 16 percent during the period 1940 to 1960, the female labor force rose 32 percent. At the time of the conference approximately 25,000 women in the area were in the labor force.

According to Miss Peterson, the typical woman in the labor force in the Upper Peninsula differed slightly from the overall State and national norms--she was slightly older; more likely to be married; less likely to have children under 6 years of age; less likely to work in manufacturing and more likely to be in a governmental agency or trade industry; and slightly more likely to be in the professional or technical groups and less likely to be in the craftsman category.

The occupational distribution, Miss Peterson explained, was due, on the one hand, to the lack in the area of manufacturing industries that would need skilled and semiskilled craftsmen and, on the other hand, to the predominance of government employment and the consequent job opportunities for women as teachers, nurses, and technicians to staff schools, hospitals, and military establishments.

Miss Peterson said that any projection about the female labor force in the area would, of necessity, be seasoned with a lot of "if's." On the assumption that the trend in labor-force participation rates would not change substantially--and ignoring the factor of outmigration because there would be much less outmigration if more jobs were available--by applying the survival rate factor, statisticians predicted a potential increase of some 6,000 women in the Upper Peninsula labor force by 1970.

The problem was where the jobs would be for these prospective workers, Miss Peterson said. She noted that a preliminary statement of goals for economic development prepared for the Upper Peninsula Committee on Area Problems by the firm of Robert Nathan Associates said that a successful development program could increase total employment by some 15,000 jobs by 1970.

The key to the whole situation, Miss Peterson pointed out, "is this 'successful development program.' This is not something which is accomplished with a let-George-do-it attitude. It will require the energies of every individual who has an interest in his or her own progress, because progress for the individual can snowball into progress for the community, the county, and the whole Peninsula. . . . For your own selfish interests, it is important that you busy yourselves with the work of the community, whether it is work for pay, volunteer work, or political work. Only with determination and the willingness to work will we be able to improve our status in society. This, then, is your challenge and mine as working women in the Upper Peninsula."

TRAINING PROGRAMS FOR WOMEN

Mr. William E. Martin
Northern Michigan University

Mr. Martin said that he had found his 2 years in the Public Services Division of Northern Michigan University a stimulating and rewarding experience because of the freedom to accommodate creatively the needs of people. The Division had been able to develop training programs of a realistic nature that imparted the kinds of skills that people needed to obtain employment.

When talking about people in the labor force and the kinds of occupational opportunity available to them, Mr. Martin said, one must bear in mind that in many cases training is an absolute essential in order for individuals to be prepared to take advantage of employment opportunities. He noted that when people thought about the technological changes that had taken place recently in their industrial society sometimes they thought of the term "automation" as referring to some kind of monster hovering over them. But actually technological change or automation--whatever we like to call it--has so many good aspects that we should start taking advantage of. As an example, Mr. Martin cited the laborsaving equipment of the telephone system and said that if we were still using the box on the wall with a crank to signal "Central" to place calls, every working woman in the country over the age of 26 would have to work as a telephone operator.

Mr. Martin said that this sort of technological change would occur even more rapidly in the future. In recognition of the fact that workers would have to prepare

themselves and reprepare themselves in order to be equipped to do the kinds of things that were necessary to function in this kind of society, the Public Services Division had established its Area Training Center. The primary purpose of the Center was to conduct post-high school, vocational, and technological training programs for the people in the Upper Peninsula, so that they might become equipped with the kinds of salable skills that were in demand in the modern world of work.

The beginning of the Center was made possible by Federal grants under the Area Redevelopment Act; further funds had been granted under that act and the newer legislation, the Manpower Development and Training Act. Both acts were administered jointly by the U.S. Department of Labor and the U.S. Department of Health, Education, and Welfare. At the local level responsibility was delegated to the State employment security office and to a public educational institution--in this case Northern Michigan University.

The local office of the Michigan Employment Security Commission was delegated responsibility for: (1) Identifying those occupations in which there was a demand for trained people. (2) Counseling, testing, selecting, and referring to training available applicants. (3) Paying people in training a weekly training allowance in lieu of unemployment compensation in the case of Manpower Development and Training Act training and/or a weekly subsistence allowance if it was necessary for persons to live away from home while in training. For Area Redevelopment Act programs there was no weekly training allowance per se, but there was a weekly subsistence allowance based upon the average weekly unemployment compensation payment in the State. (4) Placing those trained people on jobs upon completion of training.

The local educational institution was delegated responsibility for providing adequate floor space and equipment and qualified instructional personnel to conduct the training programs in a realistic manner so that the trainees would become equipped with salable skills and be employable.

Mr. Martin assured the conferees that the training conducted thus far had certainly proved to be an investment in people rather than a cost to the taxpayer. As Mr. Gazvoda had mentioned, the success of the programs was attested by the fact that over 90 percent of the trainees had been placed in jobs.

Mr. Martin said that most of the 197 women trained at Northern Michigan University were in the two programs for clerk-typists, the six for stenographers, or the two for practical nurses. A few women had been enrolled in other programs such as electronic data processing. Another group of 32 women would begin stenographic training in the following month. In various stages of development were plans for several courses in which women would be interested. Among these was a proposal for an experimental and demonstration project for training 100 unemployable high school dropouts in three selected rural depressed counties in the Peninsula.

The estimate that 40,000 more Michigan young people would enter the labor force in 1965 than in either of the 2 previous years was an indication, Mr. Martin said, of the extreme necessity to provide occupational preparation programs. Most of those involved in the kind of training offered under the Area Redevelopment or Manpower Development and Training Acts felt that it was already, so to speak, a part of the American way of life, he said. And the staff at Northern Michigan were looking forward to remaining active in the program. At the same time, the University was looking forward to the development of a number of regular tuition programs of less than baccalaureate level--associate degree programs and certificate programs--a number of different technological and vocational trade programs.

Some of the areas where there was great need for training were in sales and service and in clerical occupations. The University was also trying to prepare training programs in

a wide spectrum of health occupations rather than just the practical nursing in which it had been involved for the past several years.

Mr. Martin said he would like to present a challenge to the conferees to ponder when they returned to their communities. It was apparent, he said, that in the Upper Peninsula quite a number of women who most certainly could benefit from available work training programs simply didn't know where to go to get started. Mr. Martin suggested that local organizations could, by various means, transmit information to those women--tell the woman 40 years of age who wanted to return to the labor force and become gainfully employed and make a positive contribution that she should inquire at her local Michigan Employment Security Commission office.

In concluding, Mr. Martin said, on behalf of the University, that "As we look forward to the future we shall not bank our fires, but we shall continue to develop training opportunities within which women can be accommodated and can become equipped with salable skills and, in turn, become employed and provide a positive contribution to society and lead more useful and satisfying lives."

COUNSELING AND JOB PREPARATION

Mr. Edward J. Sell
Northern Michigan University

Mr. Sell said that there was a logical order to the two facets in his brief presentation: Counseling should come first; job preparation should follow. He suggested that in the United States we were reaping the harvest of the folly of reversing these two--we were guilty of trying to accomplish job preparation first and, in many instances, doing a very poor job of this preparation. We were doing little or no work in the area of job placement and followup. By then counseling did get in the picture, but counseling of a different sort. If we were honest with ourselves, Mr. Sell said, we would see that our greatest successes had been in the field of providing work for the psychiatrists, the marriage counselors, the arbitration boards, the employment security offices, the divorce courts, the welfare agencies, and the mental institutions.

Our harvest of wasted human resources was a national disgrace, Mr. Sell said. A very high percentage of the unemployed in Michigan were high school graduates. Young people were coming out of high school and dissipating 5 or 6 years of their lives. Some people referred to them as being in a state of limbo, not knowing what to do, how to adapt--and all this in the face of the scientific and technological advances of the age!

Counseling, what is it and who does it? It comes in many guises, Mr. Sell said, and everyone is involved in it, knowingly or unknowingly. As parents we say to our children, "We don't want you to have to work as hard as we have had to work," implying immediately that something is wrong with work. Or we say in front of our children, "I got my quota out by 2 o'clock today. I've got a good job." Or, "I don't think I'll go in tomorrow. I worked overtime last week. Let's go to the baseball game." This is counseling. As teachers we say, "But, Mary, you don't want to be a secretary. You have a high I.Q. You should go to college." And the high school counselor says, "A technological systems technician? What's that?"

On the other side--formal counseling--as managers of businesses we sit on joint apprenticeship committees giving our time and using our experience in talking to youngsters who plan to enter trades. Or as business and professional people we call our local school to see if we can assist in planning "career days" for the students. Or as service club members we form a speaker's bureau to tell other clubs, lodges, PTA's, unions, and other adult groups the kind of information imparted at meetings such as this Conference on Women in the Upper Peninsula Economy and to demand the establishment of effective occupational training programs. Parents should know the opportunities in today's world of work, and then they should sit down and discuss these in complete frankness with their children. This is counseling.

Mr. Sell urged the conferees to talk to the people primarily responsible for the education of youth in their home communities about the sort of guidance and counseling provided for school students, then about provisions for guidance and counseling for adults. He said they should find out what their junior high school or high school children were learning about such topics as "Your future in industry and business: its challenge to you"; "What industry and the free enterprise system means"; "Why an industry or a business succeeds or fails"; "What the employment opportunities in industry, business, and government are." Then they should find out how these were personalized for the individual student with respect to his job selection, his abilities and the labor market opportunities and needs, job preparation, and skill upgrading. Ask why there wasn't a unit of instruction on applying for a job, on keeping the job, on progressing on that job.

Mr. Sell noted that the 1963 Federal vocational education legislation authorized funds for equipping junior high school counselors to be more adequate in their work with youth and charged public education--whether at the high school level, the area school level, the community college level, or the university level--with the responsibility of assuring persons of all ages access to suitable training.

Panel Discussion

PROTECTIVE LEGISLATION FOR WOMEN WORKERS

Mrs. Mary D. Leonard
Michigan Department of Labor

Mrs. Leonard noted that although most of the State protective labor legislation in Michigan was primarily for women and children, the new minimum wage law would cover both sexes.

The hours law, enacted in 1909 to suit the times, limited hours of employment for adult females in specific industries to 10 hours a day and 54 hours a week, with some exemptions by approval.

6

The equal pay law as enacted covered only the manufacturing industry. Mrs. Leonard noted that women working together had been able to bring about an amendment recently that would prohibit employers in all industries from discriminating between the sexes in the matter of payment for similar work.

Michigan has a section in its penal code that forbids assigning to women workers tasks disproportionate to their strength or detrimental to their health, morals, or potential for motherhood. Mrs. Leonard said that the State Department of Labor, after consulting with other appropriate groups, had established some guidelines on the meaning of "disproportionate to their strength."

Requirements for washrooms and sanitary facilities are set out in the law. Suitable seats must be provided female employees, with their use permitted at reasonable times.

Mrs. Leonard noted that the minimum wage law, which at the time of the conference had yet to be signed by the Governor, had several "loopholes"--those under 18 or over 65 and those working in establishments employing fewer than four employees would not be covered. The law would set up a Wage Deviation Board with authority to establish specific rates for handicapped workers not able to maintain normal standards of production. The Board also would be authorized to determine for industries the amount of gratuities and the value of board, lodging, apparel, and other items of service usually furnished to employees for their benefit. An "escalator clause" had been included: the minimum wage for covered workers would advance from $1.00 on January 1, 1965, to $1.15 on January 1, 1966, and to $1.25 on January 1, 1967, after which the rate would be geared to the economy. One feature of the bill that particularly appealed to Mrs. Leonard would require employers subject to the act to furnish employees each pay period a statement of hours worked and wages paid, including deductions. This would undoubtedly eliminate many wage claims and worries about withholding for income tax or social security.

The wage payment law provided that each employer must pay employees no later than the 1st of the month for the first 2 weeks of the preceding month, and no later than the 15th of the month for the last 2 weeks of the preceding month. For many workers, particularly those in construction work, this was very important.

Copies of Michigan labor laws are available in a pamphlet which can be obtained from the State Department of Labor for 25 cents, Mrs. Leonard concluded.

EMPLOYERS' ATTITUDE TOWARD HIRING AND PROMOTION OF WOMEN

Mr. Ogden Johnson
Cleveland Cliffs Iron Co.

Mr. Johnson stressed that, in current and prospective employees, employers seek--in addition to the basic consideration of ability to do the job--dependability, adaptability to various situations, honesty, initiative, loyalty, ability to get along with others, potential for learning new skills and advancing to higher levels of responsibility, discretion, and the ability to promote good public relations. He pointed out that in a day of keen

competition among businesses, with labor accounting for 30 to 80 percent of total costs, it was essential for management to screen prospective employees very carefully.

ORGANIZED LABOR AND THE WOMAN WORKER

Mrs. Myra Wolfgang
Hotel & Restaurant Employees and Bartenders Union

Most women in the Upper Peninsula were in the unskilled, low-paid, exploited parts of service industries, Mrs. Wolfgang said. For this reason, "We have to see that the level of wages in those groups is brought up, that the exploitations stop, and that the skills are developed there." Mrs. Wolfgang said that the majority of people in service industries in the Upper Peninsula earned three-quarters less than did women in the urban areas of the State.

"It becomes the job of this conference," Mrs. Wolfgang asserted, "to set itself up as a permanent continuing group of women representing so many organizations, to see to it that as women go into the work force they at least aline themselves with those groups, such as organized labor, that will work to raise their level of living." She said that, at the same time the hotel and restaurant industry, for example, was talking about the shortage of workers and asking for Government-financed training, "they are fighting tooth and nail to see to it that the wage levels of the service industries are not brought up."

Mrs. Wolfgang said she thought the minimum wage bill should be amended before it was signed. Because it would not cover those who work less than 13 weeks, service employees in the expanding resort industry of the Upper Peninsula would not be covered, she pointed out. Moreover, many women--including probably the beauty shop operator Mrs. Peterson talked about--would not be covered because they worked in establishments employing fewer than four employees.

On the question of working mothers, Mrs. Wolfgang noted the inconsistency of, on the one hand, saying that children suffer emotional damage if their mothers leave them to hold down jobs and, on the other hand, the great number of psychoneurotics considered unsatisfactory by the Armed Forces because of their dependence on their mothers.

A study showed that 50 percent of the children of working mothers were being cared for by relatives, usually the grandmother, Mrs. Wolfgang said. But "the grandmother of tomorrow is going to be working; she is not going to be home taking care of her grandchildren. So we should give consideration now as to who will take over this responsibility."

Another big proportion of the children, Mrs. Wolfgang continued, were cared for by a nonrelative--the neighbor, the domestic, or the person the mother hires. "And let's not kid ourselves on that score. The domestic 50 years ago was the immigrant woman. The domestic today is the Negro who hasn't had any other job opportunities. Immigration has taken care of the first group, and a proper struggle on civil rights is fast taking care of the second group. The daughter of the Negro domestic is getting training today so that she can be something other than a domestic."

Only 2 percent of the children of working mothers were receiving group care. The day care center is where the children belong, said Mrs. Wolfgang, and all the women of Michigan should be working to get adequate day care facilities.

With a suggestion that conferences such as this be set up on a continuing basis, and that voting records of State legislators be studied on the question of the minimum wage, Mrs. Wolfgang concluded her remarks.

Panel - WOMEN IN PUBLIC AND COMMUNITY LIFE

Mrs. S. J. Bessolo
Past President
Michigan Federated Women's Clubs

Mrs. Bessolo said that a volunteer is a woman who cares what happens around her. She traced the development of women's organizations and said that the General Federation of Women's Clubs, formed in 1889, had grown to be the largest women's organization in the world, with 11 million members scattered through every State in the Union and 54 other countries. Mrs. Bessolo emphasized women's role in community life through voluntary civic activity--service to mankind, "not merely collecting from door to door on different charities."

Women working together for a cause "can make the impossible, possible," said Mrs. Bessolo. The General Federation of Women's Clubs not only was helping women to work toward elimination of "prejudice, bigotry, and selfishness" in community problems, but also was aiding them to promote equality of status "with an equal measure of responsibility" through various civic activities such as support of constructive legislation, establishment of libraries, awarding of scholarships, and provision of services to youth, the aged, and the mentally ill. The Michigan Federation had a unique program, a "girlstown" for the emotionally disturbed.

"It is a woman's duty to be a resourceful homemaker, and she can best be this by being a responsible community member and world citizen. By caring what is happening around her, she is a better mother and a more interesting wife and is less frustrated. A woman gives strength and she derives strength by being a vital part of an organization. In spite of the pushbutton life, we still hear women say they have no time for this or that community project. There is too much apathy. We need more empathy. The Upper Peninsula could stand much more caring by its women," Mrs. Bessolo said.

Mrs. Mildred Chamberlain
Governor's Commission on the Status of Women

Mrs. Chamberlain noted the presence of two of her fellow members on the Governor's Commission on the Status of Women and two fellow members on the Michigan Council on the Employment Problems of Working Women. She explained that the Michigan Council had been established 3 years before as a continuing committee to follow up on the work of a conference held by the Federal and State departments of labor and the business and professional women's groups. Mrs. Chamberlain was chosen president of the Council, which had five objectives: an equal pay law, a minimum wage law, better provision for day care for children of working mothers, services for women migratory workers, and the appointment of a woman as deputy commissioner of labor. A number of professional and service organizations were associated or affiliated with the Council.

Mrs. Chamberlain noted that, just as Michigan was the first State to have such a council, it was the first to have a statewide conference on the status of women and the first to have a Governor's Commission on the Status of Women. She said that at the third statewide conference, to be held shortly, there would be a celebration of the success in achieving two of the Council's objectives.

The Governor's Commission, Mrs. Chamberlain explained, had six committees: Education, Home and Community, Public Employment, Private Employment, Social and Labor Legislation, and Civil and Political Rights. The Commission members had worked hard and had had many meetings at their own expense. Reports were being prepared for presentation to and release by the Governor.

Mrs. Chamberlain concluded by expressing her hope that a continuing group, similar to the Michigan Council, would be established to carry through on subjects developed at the current meeting to help the women and economy of the Upper Peninsula.

Mrs. Marie Hager
Member, State Legislature

Mrs. Hager brought greetings from the Governor and assured the conferees that he would sign the minimum wage bill. Addressing the women in her audience, Mrs. Hager said: "I don't want to apologize about talking politics because this is the way I am elected, and your government consists of politics, and the minute you lose the politics in your government, you lose your government. So it is necessary that you have two strong parties, and it is necessary that you work within a party of your choice. As you know, government is of the people, by the people, and for the people, and there are only two kinds of people--men people and women people. So it is necessary that you get in and work for your party and your government. We have had the vote for some 44 years, I believe, and I don't think we have done too well in politics, either on the State or on the Federal level, but, ladies, this is strictly up to you. If you want this, this is what you worked for. If you don't, don't sit back and let George do it."

Discussing activities of the Michigan Legislature of particular interest to women, Mrs. Hager noted that a Civil Rights Commission had just been set up. She thought Michigan was fortunate to have an equal pay and a minimum wage law on the State level

that complemented similar Federal laws. As for education, 52 percent of the State budget from the general fund had been allocated for this purpose. Pending legislation would provide money from other State funds to aid schools in less prosperous districts such as those in the Upper Peninsula. In the field of mental health, efforts were being made to abolish large institutions and to substitute care close to home. Mrs. Hager noted the part that legislative grants for research by universities and Tourist Bureau allocations played in the economy of the Upper Peninsula. Changes in some of the ad valorem taxes on mines had brought about expansion in this type of employment, she said.

Mrs. Hager stressed that "because women's lives are so affected by the things we do in politics . . . . we need more women in politics in every level." Women could become members of schools boards and serve as township and county officers, she said, and relieve men "of many of the duties that I don't think they are too keen about having, and I think the people in your community would appreciate your taking your responsibility." In addition, Mrs. Hager asserted, women should not only vote but also participate in political party activities and seek election to State and Federal office.

Finally, Mrs. Hager asked that the same kind of support that had helped secure passage of the equal pay and minimum wage laws be given to the day care bill she planned to reintroduce at the next session of the legislature.

REPORTS OF DISCUSSION GROUPS

Group 1--Discussion leader: Jack Farley
Resource persons: Manila P. Gipp
Albert J. Gazvoda
Recorder: Sonia Maki

The group noted the need for skilled domestics and groundskeepers. It learned there were tentative plans for training groundskeepers; however, there were problems in the area of training domestic workers, the main one being wages. The group recommended that, with respect to the possibility of training domestics and groundskeepers, women's organizations in the Upper Peninsula be urged to cooperate with the Michigan Employment Security Commission in making a survey of employer needs and to assist in establishing a wage scale for each of these occupations.

The training of school dropouts and other undereducated workers not qualified for ongoing programs was discussed. The serious problem that 50 percent of women do not possess a high school diploma was noted. The proposal for basic literacy training was presented to the group. The amendment to the Manpower Development and Training Act providing an additional 20 weeks of basic education in reading and writing for illiterate trainees would open training programs to many unemployed workers who were previously declared ineligible because of the "reasonable expectation of employment" requirement of the act.

Other areas discussed were: (1) elevating attitudes toward service occupations and (2) counseling of parents on developing in their children proper attitudes toward work and other responsibilities.

Group 2--Discussion leader: Gloria Bronte
Resource persons: Catherine Hawes
Rosella Hart
Ogden Johnson
Recorder: Mary D. Leonard

Ogden Johnson, Personnel Director at Cleveland Cliffs Iron Co., in reviewing the employment status of women at his company, said their salaries were above the average. He said the company carefully screened prospective employees and hired workers whose qualifications were higher than the general run of the mill.

There was a discussion of the effect of the maximum hours restriction on the employment of women and on their promotion to policymaking positions.

The group expressed the greatest interest in training programs. Participants noted that there was still confusion about whether workers had to be unemployed in order to qualify for the federally financed programs. In the beginning there were more than enough unemployed persons to fill the courses, but at the current stage it seemed that some publicity should be given the availability of training programs, types of programs offered, and requirements for eligibility such as the provision for upgrading of skills of persons employed below their potential capacity.

One big question that remained unresolved was whether the stigma of the general conception of the Michigan Employment Security Commission as an unemployment office deterred potential trainees from investigating opportunities under the Area Redevelopment Act and the Manpower Development and Training Act.

It was the consensus of the group that an effort should be made to upgrade the status or image of so-called housekeeping jobs, and that a training program designed to prepare persons with lesser skills for employment in some of these jobs should be developed.

Group 3--Discussion leader: Frances Eastley
Resource persons: Helen Eddy
Myra Wolfgang
Mildred Chamberlain
Recorder: Ann Murvich

Mrs. Eastley opened the discussion by questioning the scope of training programs available. She mentioned a case where the State Employment Security Commission had openings for 2 trainees but 26 applicants passed the test. She was told that when an office did not have enough eligible applicants to fill a quota trainees could be supplied from another branch. Mr. Martin stressed the importance of knowing employment opportunities in the area, as well as job interests and aptitudes of applicants, so that appropriate programs could be developed. On this point he mentioned that three people on an itinerant basis were surveying needs in the Upper Peninsula. It was noted that all trainees in certain categories could be placed in jobs over a period of a few months. Work area or company preference was a factor in the delay of placement of some trainees.

One speaker told about a suggested new job classification of "wardrobe mistress," designed for women who cannot leave their home to work. When trained, these women

might be able to do mending of clothing for families other than their own for a small monthly stipend, perhaps around $5.

It was stated that more attention should be given to insuring that proficient and competent women have opportunity for supervisory positions. There was a feeling that women workers who achieve such positions must make more effort than do men in the same capacity.

A suggestion was made that the conference be continued, with the aim of making needs known in order to get further government assistance.

Group 4--Discussion leader: Frank A. Drazkowski
Resource persons: Dorothy Haener
Marie Hager
Roscoe Walters
Recorder: Joyce Peterson

The group concluded that:

It was impossible to tackle the problems of working women without looking at the entire situation in the country as a whole.

Representation at the conference did not include enough of the younger groups who were emerging as the labor force of the future. There was a problem in reaching this group.

Most women had no idea as to what was available in counseling and training.

Lack of communication was at the base of the problem.

The problems of working women should begin to be tackled at the junior high level or below. In other words, a start must be made with children in order to solve the problems of coming generations.

There should not be a concentration on the conventional jobs for women, but rather a search for new areas for job opportunities.

CLOSING SESSION

In the question period that followed presentation of the discussion group reports, Miss Marguerite I. Gilmore, Regional Director of the Women's Bureau, presided. Emphasis continued to be placed on training, with most of the questions concerning Manpower Development and Training Act courses and requirements. Volunteers cannot be

trained under that act or the Area Redevelopment Act, it was pointed out, since there must be reasonable assurance that trainees will get a paid job. However, Mr. Bosworth said, the University would help groups interested in planning training for volunteer leaders for women's clubs of various kinds.

Discussion then centered on a mechanism for following up the interest expressed in the subjects discussed during the conference. A small steering committee was selected to work on plans for the future. Mrs. Frances Eastley was chosen chairman. Members selected were Mrs. Ulrich from Escanaba, Mrs. Eddy from Houghton, Miss Peterson from Marquette, Mrs. Craine from the Negaunee-Ishpeming area, and Mrs. Bronte from the Sault area. Mrs. Eastley was designated to work with Mr. Wright and to establish a time and place for the committee to meet.

It was agreed that both employment problems and the status of women would be appropriate topics of discussion, with other areas of interest to be decided by the committee. Other suggestions from the floor included training, counseling, and day care centers. It was suggested that the committee write to others attending the conference and then decide how best to constitute the continuing group. One suggestion was that it affiliate with the Michigan Council.

Mr. Wright made a brief closing statement in which he emphasized the readiness of the University to help in any followup plans. Following this he adjourned the conference.

PLANNING COMMITTEE

Roy Johns
Director
Michigan Department of Labor

Mary D. Leonard
Assistant to Director
Michigan Department of Labor

Marguerite I. Gilmore
Regional Director
Women's Bureau
U.S. Department of Labor

*OCCUPATIONAL SURVEYS; *HEALTH OCCUPATIONS; STATE SURVEYS; EMPLOYMENT TRENDS; EMPLOYMENT STATISTICS; *MANPOWER NEEDS
NORTH CAROLINA

Estimates of future manpower requirements and training needs for 34 medical and related medi-care occupations were developed from survey information furnished by more than 400 medical and other health service establishments. Employers were contacted during the first quarter of 1963 for information on (1) present employment, (2) current vacancies, (3) anticipated employment to meet future expansion and replacement needs by the end of 1966, and (4) trainee out put by the end of 1966 from on-the-job training and training in affiliated schools. Part one contains information about overall employment trends in the North Carolina medical and health service field, highlights of the survey, and recommendations. Part two presents a summary of statewide survey findings. Part three shows statewide occupational training needs in six areas of the state. The appendix contains information about survey methodology and scope. The employment total of all occupations surveyed was 23,787 in the first quarter of 1963. Estimated training needs by the end of 1966 for 11 occupations comprised more than 90 percent of the total needs for the health service. These occupations with their needs are: Nurse aide, 815, Orderly-Attendant, 440, Practical Nurse, 319, Medical Secretary-Stenographer 280, Ward Clerk, 228, Cook 195, Medical Laboratory Technician, 176, Registered Nurse, 97, Surgical Technician, 82, Medical Technologist, 74, and Assistant Housekeeper, 70. Effective planning and cooperation action is required between employers, staffs of training facilities, educational institutions, and other agencies to help provide an ample supply of workers for the occupations in which the demand is expected to exceed the supply of qualified workers. ACKNOWLEDGMENTS

This Study, Manpower and Training Needs for Selected Medical and Health Service Occupations, represents the composite thinking of administrators, directors, and other staff members of more than 400 North Carolina hospitals and other medical agencies and institutions. The Employment Security Commission is grateful to each of these officials who contributed generously of their time and thought in formulating responses to the many questions posed during interviews with Labor Market Analysts.

Special thanks go to cooperating agencies and associations for their contributions during the planning and development stage of this research project. Among these are:

Department of Curriculum Study and Research, North Carolina State Board of Education
North Carolina State Personnel Department
North Carolina State Welfare Department
North Carolina Hospital Association
North Carolina Board of Health
North Carolina Nurses Association

Acknowledgment is also made to the Bureau of Employment Security of the United States Department of Labor for the appropriated funds necessary for carrying on the Study.

The Study was made by the Bureau of Employment Security Research, under the direction of David A. Garrison, Assistant Director. Immediate responsibility for this Study and this report rested on James C. French, Supervisor of Research, and James G. Mills, Jr., Labor Market Analyst II, assisted by Preston Johnson, Research Analyst.

We acknowledge the full cooperation of the Employment Service Division for providing the services of local office Labor Market Analysts to assist in hundreds of interviews to collect information which made this Study and publication possible. The noteworthy performance and diligence of the following Analysts in eliciting the required data deserves recognition.

FOREWORD

Recognizing the lack of workers with specialized training for occupations in the medical and health field in North Carolina, the State Board of Education requested the Employment Security Commission to make this study of present and prospective occupational training needs for medical and other health service occupations.

By using survey findings to compare trained worker demand for growth and replacement needs with the anticipated trained worker supply from on-the-job training programs, schools and other educational institutions, conservative estimates of future training needs for surveyed occupations have been made and are presented in this report. This information, we believe, may be put to practical use by:

— — — management officials interested in the prospective availability of trained medical and health service manpower in planning for their own occupational needs more efficiently.

— — — school authorities engaged in planning curriculums. Academic and vocational training programs can best be planned on the basis of occupational manpower requirements and resources.

— — — counselors in high schools, vocational schools and colleges.

— — — employment service personnel in counseling, placement and recruitment programs.

— — — young people interested in making an informed choice of a career.

— — — civil defense and mobilization officials. Information on occupational composition of the labor force, and facts about occupational labor supply and demand are essential for civil defense emergencies and for manpower purposes.

— — — community leaders in encouraging training programs under the Manpower Development and Training Act and the Area Redevelopment Act.

— — — health careers personnel and other groups in their intensive programs of recruiting young people for the medical and health service field.

This report consists of four major parts. The first part contains information about overall employment trends in the North Carolina medical and health service field, highlights of the survey, and recommendations. The second part presents a summary of Statewide survey findings. The third part distributes statewide occupational training needs into six defined areas of the State; and, the fourth part, the Appendix, contains information about survey methodology and scope.

Part I

INTRODUCTION TO STUDY

NORTH CAROLINA

MEDICAL AND HEALTH SERVICE EMPLOYMENT TRENDS

The number of persons employed in the medical and health field in North Carolina is now at an all-time high. Employment during the first quarter of 1963 in surveyed establishments alone was about 39,650. As recently as 1940, according to census data, there were just slightly over 15,000 persons engaged in hospital and other health service occupations in North Carolina. During the decade, which included World War II, the number nearly doubled and totaled more than 29,000 by 1950. By 1960 employment had increased to more than 47,000 and has continued to grow since, we believe.

Hospital employment has led these gains, comprising about 60 per cent of the total medical and health service employment in 1950 and more than 67 per cent in 1960. The following developments since 1940 help explain these increases:

— — — increased expenditures for medical research, rapid advances in medical knowledge and treatment, and the discovery of new medical techniques and drugs.

— — — rise in personal income enabling the general public to afford more health services.

— — — completion of 56 new hospitals in North Carolina since 1945, and under the federal Hill-Burton Act, initiation of more medical facility projects in North Carolina than in any other state.

— — — rapid expansion of subscription to health insurance programs, encouraging people to seek hospital and medical care more readily.

— — — increasing number of older persons and the rising public interest in medical care for these older people.

— — — understanding and increased attention to prevention of illness and of the value of professional medical care.

— — — continued medical care for veterans and their familes.

— — — trend toward shorter work week for medical and health service workers.

In general, those influences which have contributed to an increased demand for health care in the recent past are expected to persist in the future and will no doubt contribute to a further rise in the demand for medical and medi-care workers. This demand for new workers, coupled with the demand for additional workers who will be needed to replace those who withdraw from work, retire, or leave the field for other reasons, presents many opportunities in North Carolina for employment in this field over the decade of the sixties.

HIGHLIGHTS

The survey findings indicate that employment in North Carolina medical and health services will show a decided growth. The anticipated advance in surveyed establishments from the 39,650 employment level at survey time to 42,850 by the end of 1963 and to more than 49,500 by the end of 1966 attests to this group's employment growth.

The growth rate for the 34 surveyed occupations, as a group, is expected to be somewhat greater than the growth for the whole medical and health service group. Employment at survey time in these occupations totaled about 23,800, but an increase to about 26,360 by year-end 1963 and to about 30,700 by the end of 1966 is anticipated by survey respondents.

While all employment in surveyed medical and health service facilities is advancing 25 per cent by 1966, employment advances in the 34 surveyed occupations will exceed 29 per cent.

This growth means that, if expansion and replacement needs are to be met, 3,950 additional workers will need training in the surveyed occupations, by the end of 1963, and by year-end 1966 this need will increase to about 11,500.

Hospitals, medical institutions and schools now do extensive training in many of these occupations. An examination of survey data indicates that such training will meet only 54 per cent of the need by year-end 1963 and only 73 per cent by year-end 1966. Thus, additional training will be required to meet anticipated shortages of about 1,820 by year-end 1963; and a need of 3,075 by year-end 1966 remains to be met by programs not yet planned.

Net trained worker shortages of more than 75 are anticipated in each of the following occupations by the end of 1966.

Nurse Registered—Graduate	Laboratory Technician, Medical	Nurse Aide
Secretary-Stenographer, Medical	Surgical Technician	Orderly-Attendant
Ward Clerk	Nurse, Practical	Cook

Existing job vacancies for workers in surveyed occupations during the first quarter of 1963 numbered 1,540, which is 39 per cent of the estimated additional training needs by the end of 1963. The current need for registered nurses accounted for 650 of the immediate trained worker needs in all occupations revealed by the survey.

Anticipated trainee output for assistant housekeeper, physical therapy technician and hospital equipment serviceman will supply less than 20 per cent of the expected total need for each occupation by the end of 1966. Trainee output will furnish less than 50 per cent of the total trained worker need by the end of 1966 for each of 16 other occupations studied.

Those occupations for which a substantial, but inadequate, amount of training and education is planned include registered nurse, medical-record technician, clinic technician, and practical nurse. Planned training is expected to supply more than 75 per cent of total demand shown for each of these occupations by the end of 1966.

RECOMMENDATIONS

The Employment Security Commission engaged in this study to provide a basis from which training needs can be evaluated so that appropriate vocational education programs may be planned. If this report results in the development of action programs which will provide North Carolina citizens with greater employment opportunity through the provision of occupational training, then the Commission's primary objective will be realized.

Establishing needs for training alone, will not solve the problem of worker supply and demand imbalance. Effective planning and cooperative action is required between employers, staffs of training facilities, educational institutions, and other agencies to help provide an ample supply of workers for the occupations in which the demand is expected to exceed the supply of qualified workers.

In view of this, the Employment Security Commission suggests planning along the following lines:

Public and private schools should gear vocational education programs to occupational fields where job opportunities are expected to prevail. This requires evaluating present programs in the light of job requirements and promoting expansion of present on-the-job and school training programs in occupations for which trained workers are needed and thereby doing much to reduce shortages in such occupations as medical secretary, medical record technician, et cetera.

All concerned should recognize the need for promoting a greater interest on the part of high school graduates and other individuals in continuing their education and training for jobs in these needed occupational fields. It should be impressed upon all concerned that job opportunities will be available for those who qualify and that education is the best insurance against unemployment.

Some steps should be taken to encourage employers to anticipate their employment needs, to train as many of their own workers as possible for this purpose, and to provide more assistance to employers in devising training for occupations requiring short training periods such as nurse aide, orderly-attendant, and ward clerk.

Consideration should be given to a plan designed to keep trained workers in the medical and health service field by instituting more extension courses for currently employed individuals, with employers participating in these training programs by offering incentives to those who respond to this plan.

Part II

STATEWIDE SURVEY FINDINGS

STATEWIDE SURVEY FINDINGS

Introduction

Expansion and changes in the field of medical and health services in North Carolina in recent years have resulted in shortages of workers because traditional patterns of training and education have not kept pace with the increased demand. Far reaching plans, therefore, must be effected to expand and further develop educational programs, if future needs for trained people are to be met. Long range planning is essential for supplying needed professional medical and health service personnel. But what of shortages which are now evident? The most rapid relief of existing shortages can likely be accomplished by training more sub-professional workers in occupations found to be in short supply.

Sub-professional occupations requiring post-high school education of less than four years duration represent the level of occupational needs that this study was primarily designed to measure. The survey findings, it is believed, will provide training agencies with basic data concerning medical and health service employment patterns and occupational training needs. These can be used as a guide in initiating educational programs where needs are indicated.

Estimates of future manpower requirements and training needs in North Carolina for 34 medical and related medi-care occupations shown in this report were developed from survey information furnished by more than 400 medical and other health service establishments contacted during the first quarter in 1963.

Medical and health service institutions, such as hospitals, clinics, and nursing homes were selected for study because they were known to have a large percentage of the total North Carolina employment in this field. Census data for 1960 show that hospitals employed about 67 per cent of the medical and health service workers in North Carolina at that time.

Because hospitals comprise the major area of study, surveyed occupations were selected and defined primarily in terms of hospitals and are perhaps less appropriate for other segments of the medical and health service industry; however, occupation definitions were broadened to include closely related occupations in other segments studied.

Occupational shortages likely exist in other medical and health service areas not studied, e.g., offices of private physicians and dentists which were not included in the survey. The projected needs for a few occupations may be somewhat reduced by trainee output not measured by the survey. The primary omission in output is commercially operated schools, but this output is rather small and would not reduce needs in occupations such as registered nurse because all known nurse training institutions were surveyed for trainee output.

Over-all net training needs shown in this report are likely conservative because all medical and health service workers were not included in the survey. Similarly, all graduates of schools may not seek or actually enter jobs in the occupation for which they are trained, thus a reduced proportion of these graduates is likely to be available to meet established needs. All establishments likely to begin operations by the end of 1966, may not have been included even though an effort was made to see that all new hospitals opening by the end of 1966 were included in the survey. Further, at least one hospital now in operation is not included.

It, of course, is impossible to measure losses of trained and experienced persons leaving the State each year, or the new arrivals to the State entering surveyed occupations.

Employers were, with but few exceptions, contacted in person and were requested to furnish information relative to: (1) present employment; (2) current vacancies; (3) anticipated employment to meet future expansion and replacement needs by the end of 1966; (4) trainee output by the end of 1966 from on-the-job training and training in affiliated schools, where applicable.

For proper interpretation of survey findings it should be kept in mind that estimates of future labor requirements presented in all tables and charts throughout this report apply only to the anticipated needs for 210 hospitals and clinics, 193 nursing and rest homes, 75 health departments and 21 other medical facilities.

NORTH CAROLINA

FUTURE TRAINING NEEDS FOR ELEVEN SELECTED OCCUPATIONS IN SURVEYED FACILITIES

During the first quarter of 1963 about 1,540 trained workers were needed to fill job vacancies which existed in the surveyed occupations. At the time of the survey vacant positions accounted for about 37 per cent of the projected 3,950 trained worker demand by the end of 1963 for all surveyed occupations.

As of 1963 year-end, more than 95 per cent of the total net requirements for trained workers in surveyed occupations is represented in only eleven of the 34 different occupations presented in this study. Training needs by the end of 1966 for these eleven occupations comprise slightly more than 90 per cent of the total expected needs. The occupations in which the more significant needs for training were found are ranked below in order of net training requirements for each of the two terminal periods; i.e., end of years 1963 and 1966.

By the End of 1963

Rank	Title	Net Training Need
1	Nurse, Registered-Graduate	531
2	Nurse, Practical	368
3	Nurse Aide	278
4	Orderly-Attendant	161
5	Secretary-Stenographer, Medical	96
6	Ward Clerk	63
7	Cook	63
8	Medical Technologist	61
9	Laboratory Technician, Medical	50
10	Surgical Technician	37
11	Housekeeper, Assistant	31
	Total For 11 Occupations	1,739

By the End of 1966

Rank	Title	Net Training Need
1	Nurse Aide	815
2	Orderly-Attendant	440
3	Nurse, Practical	319
4	Secretary-Stenographer, Medical	280
5	Ward Clerk	228
6	Cook	195
7	Laboratory Technician, Medical	176
8	Nurse, Registered-Graduate	97
9	Surgical Technician	82
10	Medical Technologist	74
11	Housekeeper, Assistant	70
	Total For 11 Occupations	2,776

Immediate needs for workers in the above eleven occupations numbered 1,466 or 95 per cent of the job vacancies found in all surveyed occupations.

From an analysis of the two tables which follow it is interesting to note that the occupation of registered nurse ranks first in order of net training needs by the end of 1963, but this occupation drops to eighth position by the end of 1966. This may indicate that the immediate demand for registered nurses will be somewhat offset by the planned training in the 1963 to 1966 period.

EMPLOYMENT SECURITY COMMISSION OF NORTH CAROLINA

NORTH CAROLINA
AREA SURVEY FINDINGS

Introduction

Survey findings have been compiled for six designated areas of the State. These areas are shown by the map on the preceeding page. Area findings presented on the following pages provide information relative to the concentration of employment and training needs.

These area data reveal geographic concentrations of employment by occupation, show in which part of the State the greatest expansion is expected, and provide estimates of demand for training beyond the supply expected to graduate from present training schools and from on-the-job training programs. These data may serve as a guide to local training agencies in expanding or setting up new training programs.

Actual school output in a given area may not be too meaningful because graduates may seek and find employment in other areas where job opportunities exist, rather than in the locality where training was offered.

The table on the preceding page shows the per cent distribution of surveyed employment during the first quarter of 1963 and the distribution of such employment for the two forecast periods.

The table below reveals that Area 2 employment in surveyed facilities is expected to increase by nearly 45 per cent by the end of 1966. Survey results indicate that a large part of this increase is anticipated for hospitals. Two hospitals in Area 2 account for more than 40 per cent of the total estimated area employment increase by the end of 1966 in surveyed establishments.

Area 5	723	844	121	196	317	137	0	137	180
Area 6	972	1,017	45	369	414	288	0	288	126

Nurse aides comprise 23.9 per cent of total surveyed occupational employment. They were employed in 267 establishments and numbered 5,679. Of these, 86.1 per cent were female. This fact, along with a relatively low wage scale, likely accounts for the high replacement need.

In this occupation, replacement needs are expected to exceed expansion needs by almost 200 by the end of 1966.

Employers estimated they will train slightly more than one-half of the additional 655 nurse aides they expect to need by the end of 1963. As shown in the table above, on-the-job training is expected to provide more than 60 per cent of the anticipated additional need for nurse aides by the end of 1966. Thus, a training responsibility for 815 additional needed workers remains to be met.

Nurse aides were classified in adequate local supply by 55.1 per cent of employers and in surplus supply by 2.6 per cent.

* MINUS REPRESENTS AN APPARENT SURPLUS

NURSE, PRACTICAL

An individual employed in this occupation provides routine care and treatment of patients under the supervision of a professional nurse, and is expected to utilize sub-professional nursing techniques, in providing such treatments as drainages, irrigations, catheterizations, routine medications, and in taking and recording temperatures, pulses, respirations and blood pressures. May supervise nurse aides and orderlies. (D.O.T. Reference—NURSE, PRACTICAL: 2-38.20)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs*
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School 1/	Total

Area 6	384	577	193	153	346	0	293	293	53

Practical nurses comprise 10.7 per cent of the total employment in surveyed occupations and were employed in 258 establishments. Of the 2,539 practical nurses covered in the survey, 99 per cent were female.

Survey results indicate that practical nursing schools plan to train less than one-half of the 696 additional workers needed for this occupation by the end of 1963, but as shown in the above table, expect to provide 82.4 per cent of the trained practical nurses which surveyed employers estimate they will need by the end of 1966, leaving a training need of 320.

Practical nurses were classified in short local supply by 62 per cent of the employers contacted.

During the first quarter of 1963 there were immediate needs by surveyed establishments for 285 practical nurses. This emphasizes the critical shortage of trained workers for this occupation.

Seventeen practical nurse training schools were surveyed for trainee output. These schools provide a training period of 40 hours per week for 52 weeks.

1/ THE STUDY REFLECTS SCHOOLING BEING CONDUCTED WITHIN THE AREA BUT DOES NOT MEASURE THE OUT-MIGRATION OF PERSONS COMPLETING SCHOOL, SINCE FOR MANY REASONS PERSONS COMPLETING COURSES OF STUDY MAY GO TO OTHER AREAS TO SEEK EMPLOYMENT OR DO NOT WORK IN THEIR FIELD OF TRAINING AT ALL.

* MINUS REPRESENTS AN APPARENT SURPLUS

NURSE, REGISTERED—GRADUATE

An individual in this profession renders nursing care to patients, or performs specialized duties, in a hospital, infirmary, sanatorium, clinic or through a public health department or other service agency. Administers prescribed medications and treatments in accordance with approved nursing techniques. Includes general duty nurses, supervisory nurses, nursing directors, nursing instructors and special nurses. (D.O.T. Reference—Developed from a combination of definitions included under the three digit designation for NURSE: 0-33.—)

Among the primary groups not included in the survey are registered graduate nurses employed by physicians, surgeons and other private medical doctors. In addition, self-employed private duty nurses are not included.

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs*
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School 1/	Total	
Statewide	6,950	9,087	2,137	1,303	3,440	0	3,343	3,343	97
Area 1	1,396	1,759	363	189	552	0	490	490	62

Area 5	854	1,077	223	167	390	0	150	150	240
Area 6	966	1,228	262	177	439	0	335	335	104

The above table suggests the emphasis now being placed on nurse training and education. Responses from surveyed employers indicate that the net registered nurse shortage in surveyed establishments by the end of 1963 will be about 530. Yet, by the end of 1966, as a result of expanding training programs, the net shortage will decrease to slighty less than 100. It should be noted, however, as a measure of the expected supply, that all nursing education programs in North Carolina were surveyed, while all training needs are not reflected by the survey. Many establishments which are not included employ registered nurses. Census data show there were 11,940 nurses employed in North Carolina in 1960, compared to slightly less than 7,000 covered by this survey.

While nurse training and education programs appear to be closing the gap between the supply and demand, the survey shows that nurses with specialized training, such as nurse, anesthetists; head nurses and administrative nurses are in critical shortage and further study of employment needs and training output is necessary.

Survey results indicated the need for 640 additional registered nurses existed during the first quarter of 1963. These immediate needs account for about half the additional 1,300 registered nurses needed by the end of 1963. Thirty-four schools of nursing are expected to furnish around 750 graduates; thus, leaving a net shortage of more than 530 by the end of 1963.

Registered nurses were employed by 339 of the 417 surveyed establishments. Of the registered nurses covered by the survey, 6,915 or 99.5 per cent were female.

Registered nurses were classified in short local supply by 76 per cent of employers contacted while 24 per cent stated that the local supply was adequate.

1/THE STUDY REFLECTS SCHOOLING BEING CONDUCTED WITHIN THE AREA BUT DOES NOT MEASURE THE OUT-MIGRATION OF PERSONS COMPLETING SCHOOL, SINCE FOR MANY REASONS PERSONS COMPLETING COURSES OF STUDY MAY GO TO OTHER AREAS TO SEEK EMPLOYMENT OR DO NOT WORK IN THEIR FIELD AT ALL.

* MINUS REPRESENTS AN APPARENT SURPLUS

ORDERLY-ATTENDANT

An individual employed in this occupation assists professional and practical nurses by performing a variety of routine, heavy duties in the care of physically ill or mentally deficient patients. (D.O.T. Reference—Developed from the definition of ORDERLY: 2-42. 10)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Orderly-attendant employment comprises 12.5 per cent of the total employment in surveyed occupations. This occupation was found in 245 establishments; and, of the 2,962 persons employed, 70.6 per cent were male. Heavy replacement demand is attributable to nature of work, working hours, and below average wage levels.

Employers plan to train 316 of the 477 additional workers expected to be needed by the end of 1963; and, as shown in the table, only 64.5 per cent of the additional workers needed by the end of 1966 will be trained in presently planned programs.

* MINUS REPRESENTS AN APPARENT SURPLUS

ASSISTANT LABORATORY TECHNICIAN—LABORATORY HELPER

An individual employed in this occupation assists the laboratory technician by performing one or more routine laboratory tests. May wash and sterilize glassware and other equipment. (D.O.T. Reference—Developed from definition of MEDICAL TECHNOLOGIST: 0-50.01)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area 6	18	18	1	4	5	0	0	0	5

During the first quarter of 1963, surveyed establishments employed 234 assistant laboratory technicians, of which 68.8 per cent were female.

By the end of 1963, an additional need of 30 trained workers for this occupation is anticipated. On-the-job training programs will provide one-third of these workers, leaving a need for 20 additional trained assistant laboratory technicians.

As shown in the above table, known training programs will supply less than one-half the trained workers expected to be needed for this occupation by the end of 1966.

CLINIC TECHNICIAN

An individual employed in this occupation assists a physician during treatment and minor operations in a clinic: cleans, sterilizes, and lays out instruments. Prepares patient for examination and treatment. Performs routine medical duties, such as testing hearing and vision, painting and spraying nose and throat, assisting in application and removal of casts, and applying outer bandages and tape. May maintain clinic records. Requisitions supplies. Makes appointments. Keeps clinic area in neat and orderly condition. Performs other duties as directed by physician. (D.O.T. Reference—None)

Clinic technicians were employed by 14 surveyed establishments during the first quarter of 1963. Of the 53 persons employed in this occupation, 84.9 per cent were female.

Trainee output from on-the-job training programs is expected to equal the demand for trained clinic technicians in surveyed establishments by the end of 1963; and, as shown in the table, the demand will exceed known trainee output by only one by the end of year 1966.

The survey revealed no job vacancies in this occupation during the first quarter of 1963.

DENTAL LABORATORY TECHNICIAN

An individual employed in this occupation constructs and repairs metal, procelain, and plastic restorations from impressions taken by various dentists. Constructs metal clasps, inlays, and bridge work according to specifications. May process porcelain and plastic teeth and repair appliances. (D.O.T. Reference—Developed from definition of DENTAL TECHNICIAN: 0-50.06)

Dental laboratory technicians were employed in 23 surveyed establishments during the first quarter of 1963. These establishments employed 102 persons in this occupation of which 85.3 per cent were male.

Employers expect to supply 10 of the 22 additional dental laboratory technicians estimated to be needed in surveyed establishments by the end of 1963. On-the-job training programs and one school of dental laboratory technology expect to furnish 53 of the 63 additional trained persons estimated to be needed by the end of 1966, as is indicated in the above table.

The local supply of trained dental laboratory technicians was classified in short supply by 78.3 per cent of the dental laboratory employers contacted and the survey reveals that an immediate need for 10 trained workers existed during the first quarter of 1963.

The only school of dental laboratory technology in North Carolina provides a 21 month 30 hour per week course of study.

Medical laboratory technicians were employed by 253 of the surveyed establishments and numbered 593. Of this number, 73.9 per cent were female.

Survey results indicate a shortage of 19 trained workers for this occupation during the first quarter of 1963.

Medical laboratory technicians were classified in short local supply by 66.1 per cent of the employers.

On-the-job training programs and schools are expected to supply 21 of the 71 trained workers estimated to be needed by the end of 1963; and, as the table shows, will provide 79 of the 255 expected to be needed by the end of 1966.

1/ THE STUDY REFLECTS SCHOOLING BEING CONDUCTED WITHIN THE AREA BUT DOES NOT MEASURE THE OUT-MIGRATION OF PERSONS COMPLETING SCHOOL, SINCE FOR MANY REASONS, PERSONS COMPLETING COURSES OF STUDY MAY GO TO OTHER AREAS TO SEEK EMPLOYMENT. OUTPUT OF COMMERCIALLY OPERATED SCHOOLS IS NOT INCLUDED.

* MINUS REPRESENTS AN APPARENT SURPLUS

MEDICAL TECHNOLOGIST

An individual employed in this occupation performs medical laboratory analyses to obtain data for use in the diagnosis and treatment of disease. May assign and supervise work of subordinates. May assist during autopsies and engage in research. Includes instructors. (D.O.T. Reference— MEDICAL TECHNOLOGIST: 0-50.01)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Medical technologists were employed by 124 establishments during the survey period. Of the 427 persons employed in this occupation 83.3 per cent were female.

Job openings during the survey numbered 56, which account for more than half the total trained worker demand of 109 by the end of 1963, indicating the immediate need for medical technologists. Of the 124 employers using this occupation, 66.1 per cent classified medical technologists in short local supply.

The total demand in surveyed establishments for medical technologists is expected to increase to 285 by the end of 1966. Schools of medical technology are expected to furnish 211 graduates, leaving an additional training need of 74.

Ten schools of medical technology were surveyed for trainee output. These schools require entrants to have three years of prior college training. Specific medical technology schooling consists of 51 forty-hour weeks of hospital affiliated training.

1/ THE STUDY REFLECTS SCHOOLING BEING CONDUCTED WITHIN THE AREA BUT DOES NOT MEASURE THE OUT-MIGRATION OF PERSONS COMPLETING SCHOOL, SINCE FOR MANY REASONS, PERSONS COMPLETING COURSES OF STUDY MAY GO TO OTHER AREAS TO SEEK EMPLOYMENT. OUTPUT OF COMMERCIALLY OPERATED SCHOOLS IS NOT INCLUDED.

During the first quarter of 1963, there were 66 pharmacy helpers employed by 52 of the surveyed establishments. Of the 66 pharmacy helpers included in the survey, 60.6 per cent were female.

The survey revealed no job vacancies during the first quarter of 1963 and 53.8 per cent of the employers contacted classified the local supply of pharmacy helpers as adequate. Trainee output for this occupation by the end of 1963, is estimated to equal the trained worker demand and the need in surveyed establishments will exceed the trainee supply by only 10 by the end of 1966.

SURGICAL TECHNICIAN

An individual employed in this occupation is responsible for assisting in setting up the operating room prior to surgery, assisting surgeons and nurses during the operation and cleaning up, accounting for, and sterilizing equipment after the operation is completed. (D.O.T. Reference—SURGICAL TECHNICIAN 2-42.16)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

During the first quarter of 1963, 101 surveyed hospitals employed 270 surgical technicians of which 87 per cent were female.

By the end of 1963, surveyed establishments estimate they will need an additional 63 trained surgical technicians. Known training programs will supply an estimated 26 persons for this occupation, leaving an additional training need of 37. Training programs will furnish less than 57 per cent of the anticipated need for trained workers in this occupation by the end of 1966, as shown in the above table.

Trained surgical technicians were classified in short local supply by 81.2 per cent of the 101 employers utilizing this type of worker. Survey results revealed 31 job vacancies during the first quarter of 1963.

1/ NON-TUITION PAYING STUDENTS ARE INCLUDED IN ON-THE-JOB TRAINING PROGRAMS FOR THIS OCCUPATION.

ELECTROCARDIOGRAPH TECHNICIAN

An individual employed in this occupation records, as irregular wave tracings on electrocardiograph, electromotive variations in action of heart muscle to provide data for use in diagnosis of heart ailments. Work in this class involves taking, developing and mounting electrocardiograms for interpretation by a physician. Work assignments are received in terms of specific instructions from an attending physician. Work is reviewed for technical errors by a physician reading electrocardiograms for diagnostic purposes. (D.O.T. Reference—ELECTROCARDIOGRAPH TECHNICIAN: 0-50.05)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School	Total

Area 6	3	11	8	0	8	0	0	0	8

Physical therapy technician employment is expected to increase by more than 89 per cent by the end of 1966.

Employers expect to train only two of the 12 physical therapy technicians needed by the end of 1963; and, less than 20 per cent of those needed by the end of 1966 are expected to be supplied by on-the-job training programs.

During the first quarter of 1963, 56 physical therapy technicians were employed by 53 surveyed establishments. More than 72 per cent of the technicians were female.

The survey revealed five job vacancies for this occupation, and 7..2 per cent of the 53 employers classified physical therapy technicians as being in short local supply.

X-RAY TECHNICIAN, MEDICAL

An individual employed in this occupation operates x-ray equipment in the application of roentgen rays and radioactive substances for diagnostic and therapeutic purposes. Exposes x-rays, develops film and assists physicians with fluoroscopy. May specialize in taking x-rays of specific areas of the body. Makes minor adjustments to x-ray equipment. (D.O.T. Reference — X-RAY TECHNICIAN: 0-50.04)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Medical x-ray technicians were employed by 152 of the surveyed establishments and numbered 387 during the first quarter of 1963. Females comprised 75.5 per cent of those employed.

Survey results indicate that hospital training programs and schools will provide an adequate number of x-ray technicians for surveyed establishment needs by the end of 1963.

The demand for trained x-ray technicians is expected to exceed the supply in only two areas by the end of 1966, as is shown in the above table.

Fifteen hospital affiliated schools of x-ray technology were surveyed. These schools are expected to furnish 82 per cent of the total supply of x-ray technicians by the end of 1966. The greater number of these schools provide a training period of 40 hours per week for 104 weeks.

1/ THE STUDY REFLECTS SCHOOLING BEING CONDUCTED WITHIN THE AREA BUT DOES NOT MEASURE THE OUT-MIGRATION OF PERSONS COMPLETING SCHOOL, SINCE FOR MANY REASONS PERSONS COMPLETING COURSES OF STUDY MAY GO TO OTHER AREAS TO SEEK EMPLOYMENT OR TRAINEES DO NOT WORK IN THEIR FIELD AT ALL. Assistant housekeepers were found in 90 surveyed establishments, and were employed primarily in large hospitals. About 86 per cent of the 119 persons surveyed in this occupation were female.

Based on survey findings, on-the-job training programs conducted by employers will fall short by about 30 of meeting the needs in this occupation by the end of 1963. As indicated in the table above, 70 additional workers are expected to be needed by the end of 1966.

During the survey, an immediate shortage of 18 assistant housekeepers was revealed. These immediate needs accounted for about 58 per cent of the total training need indicated by the end of 1963.

Assistant housekeepers were classified in short local supply by 56.7 per cent of the 90 employers using this occupation while 43.3 per cent stated that the local supply was adequate.

MEDICAL-RECORD TECHNICIAN

An individual employed in this occupation assists a medical-record librarian in keeping medical records of patients admitted to hospitals or who are receiving health services. Prepares reports of admissions, births and deaths, transfer and discharge of patients. Indexes and codes primary and secondary diagnoses of medical histories and records, following established medical library methods. May perform medical secretarial work as secondary duty. Registered medical-record librarians are not included. (D.O.T. Reference — Developed from the job definition of MEDICAL-RECORD LIBRARIAN: 0-23.25)

Area 5	27	39	12	5	17	0	0	0	17
Area 6	31	42	11	5	16	3	0	3	13

Medical-record technicians were employed by 179 of the 417 surveyed establishments. About 98 per cent of the 274 persons employed in this occupation were female.

Survey results indicate immediate trained worker needs for eight medical-record technicians during the first quarter of 1963.

The total trained worker demand for this occupation is expected to be 67 by the end of 1963 and increase to 148 by the end of 1966. On-the-job training programs and schools are expected to provide 53 trained persons by the end of 1963 and 119 by the end of 1966, leaving an additional training need of 14 by the end of 1963 and, as shown in the above table, 29 by the end of 1966.

Medical-record technicians were classified in short local supply by 68.7 per cent of the 179 employers, while 31.3 per cent classified the local supply as adequate.

The survey of trainee output for two hospital affiliated schools revealed a training period for this occupation of 40 hours per week for 52 weeks.

1/ THE STUDY REFLECTS SCHOOLING BEING CONDUCTED WITHIN THE AREA BUT DOES NOT MEASURE THE OUT-MIGRATION OF PERSONS COMPLETING SCHOOL, SINCE FOR MANY REASONS, PERSONS COMPLETING COURSES OF STUDY MAY GO TO OTHER AREAS TO SEEK EMPLOYMENT OR DO NOT WORK IN THEIR FIELD OF TRAINING. COMMERCIALLY OPERATED SCHOOL OUTPUT IS NOT INCLUDED.

* MINUS REPRESENTS AN APPARENT SURPLUS

SECRETARY-STENOGRAPHER, MEDICAL

An individual employed in this occupation performs general clerical work requiring a knowledge of medical terminology. Takes and transcribes dictation of medical reports, letters, and minutes of meetings. Prepares periodic reports on various hospital or health service activities. May maintain files of medical records and reports, and may code and cross index records of diseases and operations. Includes all stenographic and secretarial employees whose duties require a knowledge of medical terminology. (D.O.T. Reference — Developed from job definition of SECRETARY: 1-33.01 and STENOGRAPHER: 1-37.12)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area 6	109	129	20	28	48	1	0	1	47

Based on survey findings, on-the-job training programs for medical secretary-stenographer are expected to furnish only 31 trained persons or less than 25 per cent of the anticipated trained worker demand for this occupation by the end of 1963, and less than 29 per cent by the end of 1966, as shown in the above table.

This occupation was found in 250 surveyed establishments and of the 809 persons employed, 99.6 per cent were female.

Trained workers available for medical secretary-stenographer positions were classified in short local supply by 65.7 per cent of the 250 employers and there existed a shortage of 35 qualified workers for this occupation in surveyed establishments during the first quarter of 1963.

1/ COMMERCIALLY OPERATED SCHOOL OUTPUT IS NOT INCLUDED.

SUPERVISOR, CENTRAL SUPPLY

An individual employed in this occupation directs the activities of a hospital central supply room furnishing sterile and nonsterile supplies and equipment for use in the care and treatment of patients. Insures that aseptic techniques are employed by personnel in preparing and handling sterile items. Does not include registered nurses who are central supply supervisors. (D.O.T. Reference — SUPERVISOR, CENTRAL SUPPLY: 0-52.95)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School	Total

Area 5	10	11	1	0	1	0	0	0	1
Area 6	7	12	5	1	6	2	0	2	4

During the first quarter of 1963 there were 74 central supply supervisors employed in surveyed establishments; and, of these, 90.5 per cent were female.

Surveyed employment in this occupation is expected to increase by only five by the end of 1963; however, as shown by the above table, the need for 29 additional central supply supervisors is anticipated by the end of 1966. On-the-job training programs will provide seven of these, leaving an additional training need of 22.

WARD CLERK

An individual employed in this occupation works in a hospital, assisting nurses at the hall desk, and keeping patients' charts posted from duty nurses' notations on patients' condition. Fills in records by hand. May assist patients in getting situated in room. May take personal belonging inventory and give information as to rules, practices, et cetera. Answers telephone and performs a variety of closely related tasks. (D.O.T. Reference — WARD CLERK: 1-05.01)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School	Total

Area 5	30	61	31	6	37	22	0	22	15
Area 6	47	85	38	27	65	37	0	37	28

Ward clerks were employed by 78 surveyed establishments and of the 441 persons covered in this occupation, 98.2 per cent were female. On-the-job training programs are expected to supply 34 of the 97 trained ward clerks needed by the end of 1963; and, as the table reveals, to supply 152 of the anticipated needs by the end of 1966, leaving an additional training need of 63 by the end of 1963 and 228 by the end of 1966.

Trained ward clerks were classified in short supply by 53.8 per cent of the 78 employers utilizing this type worker.

There were 19 job vacancies for ward clerks in surveyed establishments during the first quarter of 1963.

BAKER

An individual employed in this occupation produces finished bake goods, such as loaf bread, rolls, biscuits, muffins, pies, cakes, and other pastries. Measures and mixes ingredients; forms dough; and bakes products in oven. May perform other cooking duties. May supervise and instruct helpers. (D.O.T. Reference — BAKER: 4-01.100)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Trained full time bakers were found in 58 surveyed establishments. Male employment accounted for 54.4 per cent of the 79 persons working as bakers.

On-the-job training programs are expected to supply two of the six additional bakers needed by the end of 1963; and, as shown above, eight of the 33 expected to be needed by the end of 1966.

During the first quarter of 1963, job vacancies existed for two bakers in surveyed establishments.

COOK

An individual employed in this occupation prepares or assists in the preparation of a complete meal in an institutional kitchen. May prepare meals for persons requiring special diets. (D.O.T. Reference — COOK, SPECIAL DIET: 2-26.32)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School	Total

Area 6	182	199	17	46	63	6	0	6	57

Cooks comprise 4.3 per cent of surveyed occupation employment. They were employed by 287 establishments during the first quarter of 1963, and 65.7 per cent were female.

On-the-job training programs expect to furnish 19 of the 82 additional cooks needed by the end of 1963, leaving a training need of 63.

Employers expect to furnish only 22.3 per cent of the total additional trained workers needed for this occupation by the end of 1966, as shown in the above table.

Employers had immediate needs for 19 trained cooks during the first quarter of 1963.

FOOD SERVICE SUPERVISOR-CHEF

An individual employed in this occupation supervises cooks, bakers, and kitchen helpers in a kitchen and dining room. Follows menus prepared by a dietitian, but is expected to utilize acquired skills in determining the quantities of food to be ordered and prepared without day-to-day supervision. (D.O.T. Reference — Developed from definition of CHEF II: 2-26.31)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School	Total

Area 5	20	23	3	1	4	0	0	0	4
Area 6	19	27	8	2	10	1	0	1	9

Food service supervisors, excluding dietitians, were employed by 116 establishments. Females comprised 76.2 per cent of surveyed employment in this occupation.

On-the-job training programs are expected to supply only one of the 14 additional food service supervisors needed by the end of 1963; and, as shown above, only 23 per cent of the expected need by the end of 1966.

Eleven job vacancies for this occupation existed during the first quarter of 1963; and, 68.1 per cent of the employers using this type of worker classified them in short local supply.

SPECIAL DIET WORKER

An individual employed in this occupation portions food in accordance with diets in a hospital or other institution under the direction of a dietitian. Weighs out specified amounts of food and may perform some cooking as directed. (D.O.T. Reference — SPECIAL DIET WORKER: 2-29.03)

ANTICIPATED STATEWIDE AND AREA NET—TRAINING REQUIREMENTS BY THE END OF 1966

Area	Surveyed Establishments Only		Trained Worker Demand			Trained Worker Supply			Net Training Needs
	Employment During First Quarter Of 1963	Anticipated Employment End Of 1966	Expansion	Replacement	Total	On-The-Job	School	Total	
Statewide	210	252	42	41	83	51	0	51	32
Area 1	41	49	8	5	13	8	0	8	5
Area 2	16	22	6	1	7	3	0	3	4
Area 3	26	34	8	10	18	7	0	7	11
Area 4	94	106	12	22	34	29	0	29	5
Area 5	12	17	5	1	6	2	0	2	4
Area 6	21	24	3	2	5	2	0	2	3

Special diet workers were employed by 74 surveyed establishments during the first quarter of 1963. Female employment accounted for 94.8 per cent of total surveyed employment in this occupation.

On-the-job training programs are expected to supply almost 65 per cent of the additional workers estimated to be needed for this occupation by the end of 1963, and will provide 61.4 per cent of the additional need by the end of 1966. Two job vacancies existed for special diet workers during the first quarter of 1963.

OTHER OCCUPATIONS

Employment found in each of the following occupations was not adequate for significant area distribution. The table on page 18 shows the anticipated training requirements for each of these occupations by the end of 1966.

DARKROOM HELPER

Develops, fixes and washes exposed x-ray film in accordance with prescribed darkroom techniques: Immerses film in a series of chemical baths for specific periods of time. Hangs film on racks to dry or uses a special drying cabinet. May prepare photographic solutions according to standard formulas. (D.O.T. Reference — None)

During the first quarter of 1963, darkroom helpers were employed by 39 surveyed establishments.

Employers are expected to train three of the 11 additional workers expected to be needed in this occupation by the end of 1966.

FORMULA-ROOM WORKER

An individual employed in this occupation prepares infants' formulas. Mixes specified quantities of ingredients to prepare formula solution, or mixes individual formulas in accordance with *physician's* orders. (D.O.T. Reference — FORMULA-ROOM WORKER: 2-29.04)

During the first quarter of 1963, surveyed establishments employing full time formula-room workers numbered 30. All these employees were female.

On-the-job training programs are expected to furnish six of the 15 additional trained workers needed for this occupation by the end of 1966, leaving an additional training need of nine.

Formula-room workers were classified in adequate supply by 70 per cent of employers utilizing this type of worker.

RECREATIONAL THERAPY TECHNICIAN (R.T. AIDE)

An individual employed in this occupation works under the supervision of a recreational therapist in directing and participating with patients in activities, such as parlor games, dramatics and dances, tennis and softball, regulating content of programs in accordance with patients inclinations and guided by hospital policies and instructions from supervisors and doctors. (D.O.T. Reference — Developed from definition of RECREATIONAL THERAPIST: 0-32.05)

Recreational therapy technicians were employed by 11 surveyed establishments during the first quarter of 1963. Of the technicians employed, 53.8 per cent were male.

Training programs will supply nearly enough recreational technicians to meet the additional need in surveyed establishments by the end of 1963, and will provide five of the 13 additional recreational technicians needed by the end of 1966.

The survey revealed four job vacancies for this occupation during the first quarter of 1963.

MEDICAL PHOTOGRAPHER

An individual in this occupation photographs medical and allied phenomena to provide illustrations for scientific records, research, study, teaching, and publications: Processes and finishes negative material and positives in form of prints and transparancies, including lantern slides. Engages in investigative, experimental, and developmental activities. Performs administrative duties as required by workload and nature of technical photographic activities. (D.O.T. Reference — Developed from definition of BIOLOGICAL PHOTOGRAPHER: 0-56.96)

Full time medical photographers were employed by four surveyed establishments during the first quarter of 1963.

Two of the four additional persons expected to be needed in this occupation by the end of 1966, will be trained on-the-job, leaving a training need of two.

ORTHOPEDIC TECHNICIAN

An individual employed in this occupation makes, fits, and repairs artificial limbs, braces and appliances for body deformities, working from physician's prescription. Instructs patient in the use of prosthetic device or brace. (D.O.T. Reference — Developed from definition of ORTHOPEDIC AND LIMB TECHNICIAN: 5-09.410)

Six surveyed establishments employed 11 full time orthopedic technicians during the first quarter of 1963. All of these technicians were male. On-the-job training programs will provide two of the five additional persons needed for this occupation by the end of 1966.

OXYGEN THERAPIST, REGISTERED

An individual employed in this occupation sets up various pieces of oxygen equipment such as tents, masks, regulators, and flowmeters at patient's bedside as to properly furnish oxygen to patient under controlled conditions. Instructs patient in safety precautions and caring for oxygen supply. Maintains, cleans, and repairs equipment. Work is performed in accordance with instructions given by the physician ordering oxygen. Registered nurses are not included. (D.O.T. Reference — OXYGEN-THERAPY-EQUIPMENT TECHNICIAN: 0-50.03)

The number of oxygen therapists in surveyed establishments is expected to increase from five during the first quarter of 1963, to 17 by the end of 1966.

One surveyed training school will provide 12 persons for this occupation, which will equal the demand for oxygen therapists in surveyed establishments by the end of 1966.

The one known school of oxygen therapy, located in Area Two, provides a schooling period of 40 hours per week for 26 weeks.

ELECTROENCEPHALOGRAPH TECHNICIAN

An individual employed in this occupation measures impulse frequencies and differences in electrical potential between various portions of the brain, using an electroencephalograph that records data as a series of irregular lines on continuous graph for use by physicians in diagnosing brain disorders. Makes minor adjustments and repairs, such as replacing condensors and refilling pens. Work assignments are received in terms of specific instructions from an attending physician. (D.O.T. Reference — ELECTROENCEPHALOGRAPH TECHNICIAN: 0-50.14)

Full time electroencephalograph technicians were employed by 11 surveyed establishments during the first quarter of 1963.

The supply of trained workers is expected to equal the estimated demand for additional workers in this occupation by the end of 1963.

The number of electroencephalograph technicians is expected to double by the end of 1966. On-the-job training programs will provide nine of the 16 additional workers needed by the end of 1966.

ORTHOPEDIC CAST SPECIALIST

An individual employed in this occupation molds and removes plaster of Paris casts for patients, working under the direction of attending physician. (D.O.T. Reference — ORTHOPEDIC CAST SPECIALIST: 2-42.15)

Only one surveyed establishment employed an orthopedic cast specialist during the first quarter of 1963. This number is expected to increase to four by the end of 1963; and, one of the three additional workers needed by the end of 1966 will be trained on-the-job, leaving a net training need of two.

MEDICAL ILLUSTRATOR

An individual employed in this occupation makes drawings, diagrams and three dimensional models to illustrate medical findings and procedures for use in scientific publications, exhibits, post-operative consultations, and research and teaching activities. (D.O.T. Reference — MEDICAL ILLUSTRATOR: 0-44.41)

Full time medical illustrators were employed in only two surveyed establishments during the first quarter of 1963.

No employment increase in this occupation is anticipated by surveyed employers by the end of 1966.

APPENDIX

SURVEY METHODOLOGY AND SCOPE

Relatively few medical and medi-care workers employed in North Carolina are covered by the unemployment insurance program; therefore, employment figures were not available from this source for establishing a universe and, generally, results were not expanded to take into account non-surveyed users. It was not feasible to contact all medical and health service establishments during the survey due to the large number of small units with few employees; e.g., the smaller nursing and rest homes, offices of physicians and dentists, et cetera. Indications are, however, that the survey coverage shown in the following table is adequate, since census data for total employment in North Carolina medical and health services was about 47,000 in 1960, while the total employment in surveyed establishments during the first quarter of 1963 was about 39,650, with about 23,800 being in surveyed occupations. Thus, approximately five-sixths of the employment was actually included.

Type of Service 1/	Per Cent of Establishments Surveyed
Hospitals	100
Clinics Covered by the North Carolina Unemployment Insurance Law	100
Medical Laboratories Covered by the North Carolina Unemployment Insurance Law	100
Dental Laboratories Covered by the North Carolina Unemployment Insurance Law	100
State and Local Health Departments 2/	100
Nursing and Rest Homes with 25 or more beds	100
Nursing and Rest Homes with 7 to 24 beds 3/	33.3
Nursing and Rest Homes with less than 7 beds	0

Included in the survey were 417 establishments. Representatives of 342 establishments were personally contacted by specially trained Labor Market Analysts. Only Health Department responses were collected by mail contact. Prior to the contact an introductory letter was sent to each establishment. 4/ During the interview the purpose of the study and each survey item was thoroughly discussed with the representative and survey data obtained. 5/

1/ ALSO INCLUDED IN THE SURVEY ARE FOUR LARGE COLLEGE INFIRMARIES, TWO SCHOOLS OF MEDICINE, ONE SCHOOL OF PUBLIC HEALTH NURSING, AND ONE SCHOOL OF DENTISTRY.

2/ MAIL SURVEY—75 OF 83 DEPARTMENTS IN THE STATE REPLIED

3/ DATA OBTAINED WERE EXPANDED TO REPRESENT 100 PER CENT.

4/ INTRODUCTORY LETTER SHOWN ON PAGE 58

5/ SURVEY FORMS SHOWN ON PAGES 58-61

OCCUPATIONS

A preliminary list of occupations was compiled requiring primarily less than a college degree. This list and other details related to planning were reviewed by Employment Security Commission representatives and representatives from various divisions of the State Board of Education. Additions and deletions were made and a final list of 43 occupations was selected. Several definitions of occupations were revised during the survey. Survey occupations were, for the most part, classified and defined in accordance with the Dictionary of Occupational Titles, published by the Bureau of Employment Security, United States Department of Labor.

Definitions were modified to reflect differences in occupations among various segments of the medical and health services, or in different size establishments; e.g., the specific duties of a medical secretary employed in a large hospital may vary somewhat from the duties performed in a small hospital or clinic and differ even more from duties performed in other surveyed establishments. Broad responsibilities, however, remain the same.

Some occupations, while surveyed separately, have been combined in this published report because the survey contacts indicated that one person generally performed the duties of two or more similar occupations for which separate training would not be practical. Among these combined occupations are: (1) Medical Secretary and Technical Stenographer, combined under the title, Secretary-Stenographer, Medical; (2) Bacteriology, Biochemistry, Blood-Bank, Hematology, Serology and Tissue Technicians, all shown under the title, Laboratory Technician, Medical.

In some instances an individual was performing duties of unrelated jobs; e.g., in small hospitals, medical laboratory technicians very often perform the duties of x-ray technicians. Similar situations were found quite frequently in the medical secretary and medical-record technician occupations. To avoid duplication these dual job-holders were assigned to the occupation in which the most time was spent.

FORECAST OF FUTURE WORKER NEEDS

It is recognized that no employer can foretell precisely the numbers and types of workers his facility may require on a given date in the future. Anticipated worker requirements in medical and health services, however, will no doubt be influenced by population growth, changes in work methods and services rendered, plans for construction of new and expanding institutions, et cetera. Such factors formed the basis for discussing future personnel requirements with administrators and staff members of hospitals and other health facilities; and, it is believed that well-informed estimates were made.

To help obtain uniform estimates of projected staffing requirements by the end of 1966, the following basic economic assumptions were established to guide officials of all surveyed institutions:

(1) Population growth will continue at about the same rate as in the 1950-1960 period, and this will give impetus to an expansion of medical and other health services.

(2) Trained workers will become available in increasing numbers through expansion of the State Vocational-Technical Education Program.

(3) Budget requests and recommendations for operating funds to carry on already established programs and activities will be approved and reasonable budget consideration will be given to normal growth and new programs.

Employers were asked to estimate future employment and trained worker needs for occupations which were not being used at the time of the survey, but which were expected to be utilized during the forecast periods.

Incidental on-the-job training requiring non-specified periods of time was excluded from consideration. However, if the employer indicated a preference for training his own workers, additional needs were reduced by on-the-job training output, whether organized or incidental.

Current and anticipated survey employment includes, for the most part, full-time workers and excludes training-school students.

The employment and occupational information presented in this study represent actual totals for the State, except the data collected from nursing and rest homes having from 7 to 24 beds. One-third of these units was surveyed and the results inflated to represent 100 per cent.

Employment estimates for the end of 1963 are treated narratively, for the most part, because of the short period between the date of release of this publication and the end of 1963.

Additional guidance in planning, conducting, and presenting results of this survey was obtained from manpower surveys completed by other states and from the 1962 *North Carolina Study of Technical and Skilled Manpower.*

EMPLOYMENT SECURITY COMMISSION
OF
NORTH CAROLINA

P. O. BOX 960
RALEIGH, NORTH CAROLINA

March, 1963

COMMISSIONERS
HENRY E. KENDALL, CHAIRMAN
HENRY E. DAVIS
H. DAVE HALL
THOMAS E. O'CONNOR
W. BERTRAM PHIPPS
J. W. WHARTON
ADDISON VAN WINKLE

Mr. John Doe, Administrator
General Hospital
1963 Wake Avenue
Raleigh, North Carolina

Dear Sir:

The Employment Security Commission of North Carolina is undertaking a study of the present and anticipated job needs in North Carolina's hospitals and other medicare institutions.

The study has as its principal purpose the development of factual data on job opportunities. With this information, the State Board of Education may be able to plan a program and offer training through its Industrial Education Centers to North Carolina men and women in those occupations where unfilled job needs exist.

This plan of action, we believe, will benefit the hospitals and other medicare institutions by providing a source of workers showing aptitudes and workers who have had basic training in selected nonprofessional occupations found to be in short supply. Not to be overlooked is the fact that with a training program many unemployed or underemployed individuals would be able to benefit from gainful employment.

We will appreciate your cooperation with the Employment Security Commission and the State Board of Education in establishing these areas of occupational need where a training program may be instituted.

Within a short time, John M. Bennett, one of the Commission's Labor Market Analysts will visit you and discuss with you more fully the information being sought and the purposes it can serve.

Sincerely,

Henry E. Kendall

Henry E. Kendall
Chairman

Basic Economic Assumptions

Population growth will continue at about the same rate as in the 1950-1960 period, and this will give impetus to an expansion of medical and other health services.

Trained Workers will become available in increasing numbers through expansion of the State Vocational-Technical Education Program.

That budget requests and recommendations for operating funds to carry on already established programs and activities will be approved and that reasonable budget consideration will be given to normal growth and new programs.

Summary of Conferences on Professional and Leadership Development for West Virginia County Vocational Supervisory Personnel (January 10-14, 1966, February 14-18, 1966, March 14-18, 1966).

West Virginia State Dept. of Education, Charleston. Bureau of Vocational, Technical and Adult Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 66 84p.

*LEADERSHIP TRAINING; CONFERENCE REPORTS; STATE SUPERVISORS; SUPERVISORS; *VOCATIONAL EDUCATION; VOCATIONAL DIRECTORS; *EDUCATIONAL PRINCIPLES; *PROGRAM PLANNING; SUPERVISION; *EDUCATIONAL ADMINISTRATION; PROGRAM EVALUATION

The objectives of this series of 3 leadership conferences were (1) to provide information and experience from which supervisors could formulate a philsophical foundation and which would familiarize them with the principles and concepts of vocational education, (2) to provide an understanding of the structure of vocational education in West Virginia, (3) to develop essential guidelines and procedures for planning, implementing, operating, and evaluating a county program of vocational education, and (4) to facilitate the planning of projected county vocational education activities. The 50 participants of the three conferences were vocational education directors, supervisors, coordinators, and program specialists. The major focus of the presentations at the conference sessions were (1) the evolution, history and philosphical bases of vocational education, (2) a cooperative approach to program planning by the various vocational fields, and (3) administration and supervision of state and county programs. Summaries of selected presentations are included. (EM)

FOREWORD

The impact of the Vocational Education Act of 1963 has brought about many challenges. These challenges made it imperative that local leadership be informed and capable. Program effectiveness rests upon proper planning, efficient instructional practices, sound administration, and dynamic promotion. Effective leadership is the determining factor in the success of educational programs.

The Division of Vocational Education recognizes the trend toward expanding the programs of vocational and technical education. Through a series of in-service conferences it can assist in the professional development of those providing leadership for vocational education on the county level. These conferences are in recognition of the Division's commitment to the professional growth of personnel in vocational and technical education.

Planning for this series of Leadership Conferences required time and effort. We were fortunate to obtain the professional services of Dr. Albert E. Jochen, a nationally recognized vocational educator. Dr. Joseph K. Bailey served as Conference Director. To the Division of Vocational Education personnel who assisted with the conferences goes an expression of commendation. To the County Superintendents of Schools who encouraged their vocational supervisory personnel to participate goes an expression of thanks. Special credits are extended to Mrs. Ruth Edwards who did the editorial work and Mrs. Carmon Howard who transcribed the taped recordings and assisted in preparing this publication.

Fred W. Eberle

OBJECTIVES

OF

PROFESSIONAL AND LEADERSHIP CONFERENCE

I. To provide information and experiences from which supervisors could formulate a philosophical foundation and which would familiarize them with principles and concepts of vocational education.

II. To provide a knowledge of the structure of vocational education in West Virginia.

III. To develop essential guidelines and procedures for planning, implementing, operating, and evaluating a county program of vocational education.

IV. To facilitate the planning of the projected program activities of vocational education for each county.

DIRECTORY OF CONFERENCE STAFF

Name	Session	Title
Joseph K. Bailey	1-2-3	State Supervisor Vocational Program Services
Oscar J. Byrnside, Jr.	1	State Supervisor Distributive and Office Education
Ralph B. Currey	1	Program Specialist Manpower Development and Training
Clifton C. Detamore	1	Program Specialist Vocational Industrial Education
Fred W. Eberle	1-2-3	Assistant State Superintendent of Schools and Director Bureau of Vocational, Technical, and Adult Education
Darwin Harper	1	Program Specialist Vocational Industrial Education
Thomas P. Hill	1	Assistant Director, Adult and Vocational Education, Kanawha County Schools, Charleston, West Virginia
Homer H. Hogue	1	Program Specialist Manpower Development and Training
Albert E. Jochen	1-2-3	Consultant in Vocational Education East Stroudsburg, Pennsylvania Former State Director of Vocational Education in New Jersey
John M. Lowe	1	Retired State Director of Vocational Education, West Virginia Charleston, West Virginia
Claude McGhee	2	Professor, Agricultural Teacher Education, West Virginia University, Morgantown, West Virginia
Alton Pritt	1	Program Specialist Vocational Industrial Education
Pauline Stout	1	State Supervisor Vocational Home Economics

John T. St. Clair	1	Assistant State Superintendent Bureau of Curriculum and Instruction State Department of Education Charleston, West Virginia
J. Jackson Townsend	1	State Supervisor Vocational Industrial Education
W. H. Wayman	1	State Supervisor Vocational Agriculture Education
Carmon Howard	1-2-3	Conference Secretary Secretary, Vocational Program Services

DIRECTORY OF PARTICIPANTS

Name	Session	Title
Lawrence Bartlett	1-2-3	Coordinator, Area Vocational Program, Ritchie County
Gene Bowling	2-3	Supervisor, Vocational Education, Fayette County
Charles T. Brooks	1-2-3	Director of Vocational Education, Mercer County
Guy E. Cain	2	Program Specialist, Vocational Agriculture Education
Harley W. Calendine	1-2-3	Director of Vocational Education, Wood County
Lawrence Cavendish	1-2	Program Specialist, Vocational Agriculture Education
John W. Cole	2	State Supervisor, Manpower Development and Training
Raymon Cunningham	1-2-3	Supervisor, Vocational Education, Jackson County
Gilbert O. Dean	1-2-3	Local Supervisor, Richwood High School, Nicholas County
James B. Deck	2	State Supervisor, Adult Basic Education
Glenn H. Fogle	1-2-3	Supervisor, Vocational Education, Wayne County
Don Fogus	2	Director of Wood Utilization Training Program, Glenville State College
Edna Hall	2	Program Specialist, Vocational Home Economics Education
Thomas P. Hill	1-2-3	Assistant Director, Adult and Vocational Education, Kanawha County Schools, Charleston, West Virginia
Beno Howell	1-2-3	Supervisor, Vocational Education, Mingo County

John L. Kirby	1	Director of Vocational Education, McDowell County
Henry E. Knight	1-2-3	Director of Vocational Education, Kanawha County
Harold B. Lawson	1-2-3	Coordinator, Vocational Education, Marion County
Nancy Matthews	2	Program Specialist, Vocational Home Economics
George S. Mullett	1-2-3	Supervisor, Vocational Education, Wetzel County
W. Grady Mullins	1-2-3	Director of Vocational Education, Wyoming County
Kenneth E. Noah	1-2-3	Vocational Coordinator, Harrison County
C. B. O'Dell	1-2-3	Coordinator, Vocational Education, Tucker County
Robert A. Pastorius	1-2-3	Coordinator, Vocational Education, Marshall County
Charles T. Patrick	1-2-3	Coordinator, Vocational Education, Kanawha County
Roy E. Potter	1-2-3	Principal, McKinley Vocational School, Ohio County
James D. Robinson	1-2-3	Director of Vocational Education, Raleigh County
Glenn E. Smith	1-2-3	Supervisor, Vocational Education, Mason County
R. L. Taubert	1-2-3	Coordinator, Vocational Education, Clay County
Carl S. Thomas	2	Program Specialist, Vocational Agriculture Education
Jesse F. Thorpe	1-2-3	Assistant Director, Vocational Education, Wood County
W. B. Ward	3	Assistant Superintendent, Ohio County Schools
Genevieve Williams	2	Program Specialist, Vocational Home Economics

PROFESSIONAL AND LEADERSHIP DEVELOPMENT WORKSHOP
for
COUNTY SUPERVISORS, COORDINATORS, AND DIRECTORS OF VOCATIONAL EDUCATION

FIRST WEEK

Monday, January 10, 1966

1:00	Registration
1:15 - 1:45	Why Are We Here? Dr. Joseph K. Bailey
1:45 - 2:15	Vocational Education - An Integral Part of Public Education Mr. John T. St. Clair
2:15 - 3:00	Vocational Education - An Economic Essential in West Virginia's Growth Mr. Fred W. Eberle
3:15 - 5:00	Evolution of Vocational Education Dr. Albert E. Jochen

Tuesday, January 11, 1966

8:30 - 9:30	Evolution of Vocational Education Dr. Albert E. Jochen
9:30 - 10:15	History of Vocational Education in West Virginia Mr. John M. Lowe
10:35 - 12:00	Philosophical Bases of Vocational Education Dr. Albert E. Jochen
1:15 - 3:00	Philosophical Bases of Vocational Education Dr. Albert E. Jochen
3:15 - 5:00	Vocational Agriculture Education Mr. W. H. Wayman

Wednesday, January 12, 1966

8:30 - 9:00	Vocational Home Economics - Wage Earning Miss Pauline Stout
9:00 - 10:00	Youth Organizations Dr. Albert E. Jochen
10:15 - 12:00	Vocational Home Economics - Homemaking Miss Pauline Stout
1:15 - 3:00	Basic Principles and Concepts of Vocational Education Dr. Albert E. Jochen

3:15 - 5:00	Vocational Industrial Education Mr. J. J. Townsend, Mr. Alton Pritt, and Mr. Clifton C. Detamore

Thursday, January 13, 1966

8:30 - 9:00	Distributive Education Mr. O. J. Byrnside, Jr.
9:00 - 10:00	Health Occupations Mr. J. J. Townsend and Mr. T. P. Hill
10:30 - 12:00	Technical Education Mr. J. J. Townsend and Mr. Darwin Harper
1:15 - 3:00	Business and Office Education Mr. O. J. Byrnside, Jr.
3:30 - 5:00	Effective Communications Dr. Albert E. Jochen

Friday, January 14, 1966

8:30 - 9:30	Area Vocational Program (State) Mr. Homer H. Hogue
9:30 - 10:30	Manpower Development and Training Program Mr. Ralph B. Currey
10:45 - 11:30	Review Dr. Albert E. Jochen
11:30 - 12:00	Application Dr. Joseph K. Bailey

SECOND WEEK

Monday, February 14, 1966

1:00	Registration
1:15 - 1:30	Goals to be Attained This Session Dr. Joseph K. Bailey
1:30 - 2:15	Relationships of Session One to Session Two Dr. Albert E. Jochen
2:15 - 3:00	Vocational Education Act of 1963 Mr. Fred W. Eberle
3:15 - 5:00	The TEAM Approach to Program Planning, Principles and Techniques Dr. Albert E. Jochen

Tuesday, February 15, 1966

8:30 - 9:30	Workshop Utilizing TEAM Approach to Current Problems in Program Planning
9:30 - 10:15	Workshop Reports
10:30 - 12:00	The TEAM Approach to Program Promotion, Principles and Techniques Dr. Albert E. Jochen
1:15 - 2:15	Workshop Utilizing TEAM Approach to Current Problems in Program Promotion
2:15 - 3:00	Workshop Reports
3:15 - 5:00	The TEAM Approach to Program Development, Principles, and Techniques Dr. Albert E. Jochen

Wednesday, February 16, 1966

8:30 - 9:30	Workshop Utilizing TEAM Approach to Current Problems in Program Development
9:30 - 10:15	Workshop Reports
10:30 - 12:00	Techniques in the Development of Vocational Curricula and Instructional Materials Dr. Albert E. Jochen
1:15 - 2:30	Workshop on Current Problems in the Development of Curricula and Instructional Materials
2:30 - 3:15	Workshop Reports
3:30 - 5:00	The Orientation of New Teachers Dr. Albert E. Jochen

Thursday, February 17, 1966

8:30 - 10:15	In-Service Teacher Training and Its Coordination With the Statewide Program Dr. Albert E. Jochen and Mr. Fred W. Eberle
10:30 - 12:00	Coordination of Shop,Related, and General Instruction Dr. Albert E. Jochen
1:15 - 3:00	Program Evaluation Dr. Albert E. Jochen

3:15 - 4:15	Research--State and Local Responsibilities--Current and Possible Future Needs Dr. Joseph K. Bailey
4:15 - 5:00	Guidance, Placement, Follow-Up Dr. Albert E. Jochen

Friday, February 18, 1966

8:30 - 10:15	The Vocational Leader and His Personal Professional Growth Dr. Albert E. Jochen
10:30 - 12:00	Presentation of Current Problems Relating to Topics of This Session to Panel Dr. Albert E. Jochen, Mr. Fred W. Eberle, and Dr. Joseph K. Bailey

THIRD WEEK

Monday, March 14, 1966

1:00	Registration
1:15 - 1:30	Introductions and Announcements
1:30 - 2:30	What We Have Accomplished - Goals of This Final Session Dr. Albert E. Jochen
2:30 - 3:00	Progress Report - Ohio County Vocational Education Plan Mr. Roy E. Potter
3:15 - 4:00	Program Planning - Harrison County Mr. Kenneth E. Noah

Tuesday, March 15, 1966

8:30 - 9:00	Role and Responsibilities of County Supervisors of Vocational Education Dr. Joseph K. Bailey
9:00 - 10:00	Workshop During Which Job Description Will Be Finalized
10:15 - 10:45	Workshop Reports and Discussion
10:45 - 12:00	Fundamentals of Sound Local Administration and Supervision of Vocational Education Dr. Albert E. Jochen
1:15 - 1:45	Supervisor's Annual Report to Superintendent and Board of Education Dr. Joseph K. Bailey

1:45 - 3:00	Public Relations in Administration and Supervision Dr. Albert E. Jochen
3:15 - 3:45	Question and Answer Period
3:45 - 4:30	Teacher Education Mr. Claude McGhee
4:30 - 5:00	Question and Answer Period

Wednesday, March 16, 1966

8:30 - 9:30	Techniques in the Development of the Vocational Budget Mr. Fred W. Eberle
9:30 - 10:15	Question and Answer Period
10:30 - 11:30	Financing the Local Programs of Vocational-Technical Education Mr. Fred W. Eberle
11:30 - 12:00	Question and Answer Period
1:15 - 2:15	Techniques Helpful in Efficient Scheduling of the Administrators' and Supervisors' Time Dr. Albert E. Jochen
2:15 - 3:00	Question and Answer Period
3:15 - 4:15	School Law Mr. Fred W. Eberle
4:15 - 5:00	Question and Answer Period

Thursday, March 17, 1966

8:30 - 10:00	Relationships of State and County Projected Program Activities Mr. Fred W. Eberle
10:15 - 11:15	Workshop - Preparing County Projected Program Activities
11:15 - 12:00	Workshop Reports
1:15 - 2:15	Methods and Techniques for Broadening the Horizon of the Following With Respect to Vocational-Technical Education a. Industry and Labor b. The Community c. Communications Media Dr. Albert E. Jochen

2:15 - 3:00	Question and Answer Period
3:15 - 4:15	Advisory Committees, Their Use and Abuse Mr. Fred W. Eberle
4:15 - 5:00	Question and Answer Period
6:00	Banquet

Friday, March 18, 1966

8:30 - 9:30	Summary Dr. Albert E. Jochen
9:30 - 10:15	Evaluation Dr. Joseph K. Bailey
10:30	What Comes Next? Mr. Fred W. Eberle

Summary of Selected Presentations

First Conference

January 10-14, 1966

Cedar Lakes

Vocational Education - An Integral Part of Public Education

John T. St. Clair

The expansion of vocational education through the enactment of the Vocational Education Act of 1963 places a tremendous responsibility on the shoulders of vocational directors, superintendents, principals, and the vocational teachers.

West Virginia's educational pattern is the individualized comprehensive educational program, one that fits the needs of the boy and girl through public education. There are three basic phases of this program:

1. General education which is the core of learning beginning at the home level and continuing through graduate school and into everyday life.

2. Professional education

3. Vocational education

In the area of vocational education, a magnitude of opportunities are available. It is the responsibility of vocational people to spend time communicating with administrators in the local school and at the county level so that sound, workable programs may be cooperatively developed. More programs have not developed because of the problems created. The reasons for some of the problems are lack of manpower and organization at the county level. To do an effective job, time must be found for county supervisors to discuss some of these problems with administrators, and it might be possible to convince them of the value of a team approach in vocational education.

The offerings in the vocational program and the regular program in the comprehensive school must be correlated to be effective. Segmentation, whether it arises in school from individuals, individualistic approach, personality differences, or purely from the lack of organization or administration, creates a big question mark about the total educational program. The learning acquired should lead to some natural growth, education, and competencies for the attainment of a goal.

Building of high-quality programs at the local level is the administrator's responsibility; but by the very nature of vocational programs at the national level, state and county levels, it is easy to ignore the ground rules. Therefore, county supervisors have the responsibility of working very closely with the local school administrators. County vocational schools and their offerings and regional developments will make this working relationship at the local level even more important.

There are great possibilities under the federal vocational acts, and the school attendance and service areas should be surveyed to determine the needs of the people. The challenge of today in our schools is to meet these needs. This calls for imagination in exploring, crystalizing, and developing programs. Vocational programs have been fairly stable and consistent over the years. With the development of special education programs and

programs for older school youth, there will be a need for modification. This will be a problem dealing with training programs for youngsters who may not be of the caliber preferred in terms of present course offerings and of the technical programs envisioned. This may come under the rehabilitation phases of the program, but the line of demarcation is not very well fixed. It is evident that curricula should be developed to meet the needs of the mentally retarded; therefore, vocational people must examine and plan projected programs to eliminate problems on both ends of the human scale.

Vocational education offerings are a part of the total education program and will become even more important. Coordinated efforts of vocational people and school administrators will be necessary to bring about change. A high-quality program must be developed. Vocational curriculum, guidance, and related training necessary for job entrance should be provided. Both the academic and vocational aspects of the present program need to be adjusted. Preparation of teachers is important. It is the coordinated planning at the local level which should provide for the adequacy of vocational education. In the final analysis, the syllabus of the course offerings and the assignment of responsibility in that area are the important problems. Through cooperative planning, this problem can be solved; but it will take a careful, realistic, and practical approach.

Evolution of Vocational Education

Dr. Albert E. Jochen

American philosophies, forces and factors operating on them, and the basic principles of vocational education can be related as they work as a coordinated whole.

The lifeblood of Democracy is free, universal public education as freedom comes from enlightenment. Our objectives are to educate everyone.

In colonial times initiative, a sense of responsibility, and a cooperative spirit were necessary in order to survive. The girls of that day had opportunities for learning homemaking that are not present today in a great majority of areas. It is highly possible that 75 percent of all the young people of today never learn to do anything at home.

Julian Huxley said that the evolution of our culture reveals that the surge for survival has been supplanted by a struggle for fulfillment. This is the effect of a technological society. It is often difficult for the ordinary young person to get this feeling of personal worth in a private technological society. Fulfillment is the key word as it is an essential ingredient of the educational program.

In the 1900's, most of the youngsters were in school from kindergarten through the fourth grade. After the fourth grade, the escape hatch created a tapering effect as many students dropped out of school. Only three or four in the entire area would complete high school. There was a highly selective group in high school--not by tests, but by economics. Teachers and principals had a tremendous influence on the lives of students.

Today, compulsory education laws keep youngsters in school and the enforcement of child labor laws lessens employment opportunities. Attitudes concerning education are different. There are pressures from parents, and students are forced to remain in school.

If we are to educate all the children of all the people, we should consider their needs, interests, and abilities in order to determine what education is best for all. General education and vocational education are tied together by a very close bond.

In order to provide a program of instruction to give fulfillment, we must recognize that there are different kinds of intelligence. Some young people have a high degree of abstract intelligence or intellectual ability. They are able to close their eyes and visualize, as does the architect.

But we must be realistic--not everyone goes to college. Vocational programs are provided for those students with concrete intelligence. The practical and theoretical must be related or there is no learning. The machinist with his concrete intelligence can bring to life the creativity of the invention, and he has something tangible.

If there is an excellent program in each vocational field but the academic areas have not connection or relationship, the program is weak. Honest educational hurdles should be placed in the path of a person striving to attain a goal. Mathematics and science needed in a particular field should be developed. Learning is much easier and more meaningful when the need for it is realized.

An article appeared in the December 18 issue of Saturday Evening Post, "Why Millions Have No Jobs," concerning job entry requirements and unemployment. Promotion policies within companies and job entry requirements often appear as straight artificial walls with no new places for employment; and in solving the problems, a terrific social and economic problem is created. College graduates often know about testing and theory, but sometimes they do not know the first thing about what is going on at the plant. If we want to survive as a good democracy, these problems must be faced.

Teachers are being taught how to handle all kinds of students in all kinds of situations and in every kind of economic and social environment, but are they being trained to meet the requirements of the Vocational Education Act of 1963? Culture is important, but so is your knowledge and skill. A teacher should know how to relate his teaching to the changes in technology in his particular field.

Some philosophical foundations are applicable to the total area of education. Vocational education cannot be divorced from the problems that are certainly a part of general education. We are making progress as we provide for the mentally handicapped, the emotionally and physically handicapped, and the intellectually handicapped. Democracy is definitely concerned about every kind of youngster.

It is a false assumption to say that everybody is going to college, everybody is going through high school, or that everybody is going to be employed. We have started to build arbitrary screening devices to keep people out of school, to limit their progress in college, and to make it difficult for them to obtain jobs. It is the job of educators to destroy this artificial standard for employment because it screens out too many people. Society through organized government or legislature is going to have to pass legislation and provide monies to do something about the people who are unable to meet the employment standards if industry and society do not solve the problem. Sociologists and psychologists have advocated a guaranteed income for everybody as a possible solution. A give-away plan robs a person of his feeling of security. You do not experience fulfillment when you are not a contributing member of society.

There is intensive screening in the selectivity of students going to college and this has an effect on teacher training institutions and our total education program. For instance, at Rutgers University 148 credits are required to get a Vo-Ag degree while the rest of the college requires 128 credits. General agriculture graduates can finish with 132 credits. This seems to penalize anyone wanting to be a Vo-Ag teacher.

The team approach is effective in teacher training to give each person a better understanding of what is happening in ~~other fields~~. If someone has more interest in a different phase of the program, he may want to change and work in that field altogether. This type of cross-fertilization enables teachers to compare notes and determine their strengths and weaknesses as well as those of others. Methods of teaching are developed in such a plan. If we are going to do any teamwork with general educators, it is necessary to work inter-relatedly with each other.

Vocational education started to mushroom as we emerged from an agrarian economy into a technical economy as a result of the war. Our country looked to industry for skilled help to supply needed goods and services. Machinists, tool and die makers, millwrights, electricians, carpenters, and brick layers were desperately needed.

The Centennial Fair in Philadelphia in 1876 displayed the result of the trained craftsmen in Russia and this exhibit influenced our progress. The industrialist visiting the Centennial backed the passage of the so-called mechanics arts instructional program. There was a modification of this act in 1881 which resulted in three schools that are still in existence.

Charles Prosser was instrumental in the passage of the Smith-Hughes Act. He was a vigorous, intelligent, far-sighted individual with the best interests of adults and young people at heart. In the 1917's, there was very little available to help an instructor of vocational education. Many of them had no teacher training and no courses in psychology or methods of teaching. Textbooks were not used. Today, we have all kinds of texts which often are not related to the work in a practical way. Teachers and supervisors should be very certain that there is a direct relationship between the related and skilled areas along with academic subjects.

In relating academic areas, the team approach is needed. For example:

An instructor of a well-conducted auto shop was exceedingly proud of the fact that he not only imparted skills to his students, but he placed them in a part-time cooperative situation to enable them to get intensive training for maximum productivity. Students were rated high on personality, eagerness to work, attitudes, work habits, skills, and abilities.

Two of the boys from this class were observed in geometry class which was unrelated. They were failing the subject because they could not see the relationship of this to the training they received in auto shop. This created a dishonest educational hurdle.

This type of situation affects a student's attitude toward the school and spotlights the need for an improved course of study, emphasizing the importance of rapport between the academic teacher and the shop teacher.

Philosophical Bases of Vocational Education

Dr. Albert E. Jochen

Curriculum development is the single most important element in the vocational education program. It is in this area that teamwork and coordinated effort is all important. Some school administrators ask the person in charge of the educational program to examine, study, and evaluate their program and make suggestions for improvement. In developing a curriculum, we should capitalize on work habits and attitudes. Students are different physically and mentally, different in their interests and capacities; but all of them have some good God-given talent. Careful planning as well as teaching is necessary for effective programs.

The Federal Government has been in the business of education for a long time. In colonial days the schoolhouse and the church were synonomous with democracy. The first indications of federal activity appeared in the ordinances of 1785. The early land grants were made for education in general and do not carry any provisions for general supervision, but as an aid to education. Abraham Lincoln signed the Morrell Act in 1862 that began the establishment of the college of agriculture--the land grant colleges. The Hatch Act in 1887 provided for the establishment of agricultural experimental stations.

We should understand and be well informed on the Federal acts for vocational education. It is the interpretation of your knowledge and your ability in operation that determines the strength or weakness of the program. The control is held at the local level in every community, and the program can only be as strong and effective as administrators make it.

In 1906 the National Society for the Promotion of Vocational Education did a tremendous amount of good. The Smith-Hughes Act provided a continuing source of money without fighting for appropriations each year. Objections were registered because standards needed to be established.

Probably the greatest deterrent to progress in secondary education in this country is the scheduling. We need to look at the schedule and the realistic relationship of it to learning. Some drastic changes are needed in methods of teaching, methods of organizing instructional materials, and the emphasis that is placed on some of these things. Private business often steps in when educators fail. Unions are also in the educational business. If educators do not set up apprentice classes or evening classes when there is a need for this training, unions with plenty of money will erect a building or set up a school for those who are working in union shops. This, in a sense, is filling the vacuum that is often left in our system.

In between the Smith-Hughes and George-Barden Acts, there were some additional appropriation acts: George-Reed, George-Elsey, and the George-Dean Acts.

Business education is probably one of the first programs that entered vocational education. It has not grown and developed in relation to the changes in the business world. General educators often object to requirements of class time and size of class. Advisory committees are essential because they emphasize the importance of business education.

Provisions of the Smith-Hughes Act required the development of a State Plan. One of the major weaknesses of this act was excessive Federal dictation and domination. The State Plan is presumably tailor made to meet the needs of particular states; however, there are certain requirements in the Smith-Hughes Act that must be incorporated into the State Plan. Education had to be of less than college grade, not knowingly leading to a degree. Some states identified their junior colleges as secondary institutions in order to get vocational money for "less than college grade." There are many kinds of patterns of organization and organizational structures. Good vocational programs may be conducted in a comprehensive high school or a vocational center which has a relationship to a high school or a self-contained area-like school which gives the complete curriculum and a diploma, or at the post-high school level. In planning a program, it is essential to follow sound principles to determine needs. It is not only the organizational structure but it is the application of sound, practical vocational principles, and the development of a functional curriculum that make a good base for vocational programs.

The Smith-Hughes Act specified that the vocational educational program must provide education and training for profitable employment. Guidance and counseling must be used to screen students to determine their interests and aptitudes and to consider job opportunities in the various fields. Individual prejudices must be removed and problems must be solved realistically. Educators should read widely and be well-informed in the political field, in the socio-economic area, in sociology, and in the technical field.

Clarence E. Randall, chairman of Inland Steel, wrote an article, "Management in Automation," which pointed out the fact that management is trying to fill the vacuum that is created by the inactivity of education. Management which takes the profit from automation must share the burden it

creates. Industry wonders if private initiative and private decision-making will endure or whether both will be eventually swallowed by the total avalanche of socialism. This enlightened capitalist sees and recognizes the problem that if industry does not do something in the area of initiating automated programs, the Government will. This is true in education; if we fail to recognize and solve problems created by living in a highly technological society, someone else will. Basic Systems, Inc., an educational subsidiary of the Xerox Corporation, has recently been assigned the responsibility of designing and operating an innovative education and training program for out-of-school, out-of-work girls like the Job Corps Center in Huntington, West Virginia. If vacuums are created, whether in the business, industrial, or educational world, something is going to fill that vacuum.

Public education at the secondary level has done an outstanding job of preparing youths for college. Parents want their children to be adequately prepared and capable of entering a college. The college trained teachers, supervisors, and administrators lend a receptive ear and they understand how to provide such educational training. It cannot be concluded that the traditional subject matter taught is and always will be essential to the education of all youths. We have talked about the sacredness and dignity of the individual and have conducted untold hours of research on individual differences, but the organization of our educational programs rarely reflects our knowledge of or concern for individual differences. Frequently, education and training essential to prepare and equip those who administer and teach in our schools to meet the needs of youths who enter the world of work upon graduation is inadequate or lacking in vocational education.

Those who have the responsibility for setting standards for admission and graduation from our schools and colleges have exceedingly grave responsibilities. Public education is subject to external pressures--political, social, and economic. Education is the orderly way to bring about change.

A democratic technological society competing in the international market utilizes its technology to cut production costs. It is easy to cut costs by eliminating unskilled and semi-skilled workers through automation and mechanization in industry and agriculture. The technology that deals with improving production is also an economic factor because it not only raises the money but creates unemployment as well. U. S. Department of Labor reports that 200,000 jobs are being lost as a result of automation. Secretary of Labor Wirtz says that 20 percent of the unemployed have not completed the eighth grade, and Manpower and Development Training programs can only recruit three percent from this group. There is a percentage of our people which we will always have to take care of, but this percentage should be reduced as much as possible. The President of Columbia University states that by 1970 the labor force will total 84,000,000 and there will only be 75,000,000 jobs. This means that 11 percent of the work force will be unemployed.

Full employment in a free society is difficult and as a result many devices are used in order to affect the educational institutions. Employment entry age may be delayed until 18 or over and the age for retirement may be reduced. This practice shortens the actual productive years of the

individual and helps maintain a low unemployment figure. We can maintain a high draft rate, provide crash programs, such as ARA and MDTA, and support pressures against automation and mechanization which cannot help but affect education. Long-range programs must be developed. Our materials for protection and those that the enemy have are such that it takes intelligence to use them, to assemble them, and to service them. Our Gross National Product has been rising; and, statistically, we have been presenting evidence to show increased annual rate for workers. Improved income coupled with other sociological and economic factors means that more youth will remain in school for longer periods of time. The curve of economics goes up, the curve of production goes up, and enrollments of young people in school increases. There is intense competition for a college education and the college's limited physical capacity has resulted in higher and higher requirements for admission and finer academic screening for admission. The person who gets through and comes back to teach does not always prove to be a good teacher. He is good only if he is working with people exactly like him.

Two years ago, Rutgers gave any trade and industrial man coming in for his teacher training 32 college credits by having his manipulative skills and knowledges checked by a reviewing board. Today, only 12 credits are available for that type of individual. The men in charge of this teacher education program have not had work experience. They know subject matter but do not know the first thing about requirements for good vocational teachers. This is true in other areas, and for this reason teachers, supervisors, and administrators are not prepared to cope with the educational program which must be given to meet the educational needs of all youths.

Organized education is an ancient and honorable institution. Its tradition stems from cultures which never recognized the philosophy of education for all. Its vocational aspects did not come into being until comparatively late in the history of mankind. We have improved through our technology and our competitive society. We must face the bitter facts that the traditional pattern cannot continue.

A new educational pattern must be built, and it should be flexible as forces are always at work making existing jobs obsolete. This is a task for the courageous, intelligent individual who sees on the horizon a better, more purposeful life for all, and for this he is willing to make whatever supreme sacrifices are necessary.

Youth Organizations

Dr. Albert E. Jochen

The feeling of purposefulness and belonging is the first and foremost contribution of vocational education youth organizations. The organizations also offer opportunities for leadership training. Through activities within the chapters, students learn to talk before a group, write essays, conduct meetings, and are given inspirational leadership which helps to assure effective citizenship. The social graces are improved by taking an active part in camps, etc. As students are exposed to favorable learning environments, they acquire confidence and feel more secure.

Another function of vocational education youth organizations is to focus favorable attention on the programs: agriculture, distributive occupations, homemaking, industrial education, and business education. Good public relations are created as members work closely with persons in business, industries, and Goverment.

Guidance placement is another benefit received from membership in the vocational education youth organizations. The contacts young people make help in their future job placement. The opportunities realized through the program open up new vistas and new horizons for them.

Youth organizations such as FHA, FFA, DECA, FBLA, and VICA provide aspiration, purpose, and an opportunity to develop leadership qualities including character-building, attainment of self-confidence, and poise.

Here are some problems affecting these youth organizations:

1. Inability to get sufficient staff

2. Time and money involved in attending conventions and meetings.

3. It is considered an extra-curricular activity and there are contests and other activities that take loads of effort, preparation, and time.

Objectives and aims have to be clear; educators and administrators have to be informed as to the purpose and value of the organization. Many people should be involved in order to have a successful program.

Basic Principles and Concepts of Vocational Education

Dr. Albert E. Jochen

Regardless of the amount of education, training, and experience an individual may have in a given area, he makes a serious mistake if he concludes that he is the fountainhead of all wisdom in his field. The viewpoints presented represent educational specialists at state and local levels in agriculture, business education, distributive education, home economics, industrial arts, occupational guidance, trades and industries, semi-professional, and technical fields. They are consistent with the recommendations of the President's Panel of Consultants on Vocational Education and with the purposes, policies, and procedures of vocational education under recently enacted federal legislation. There is considerable and unnecessary confusion permeating the community concerning vocational-technical education and industrial arts. This stems from the fact that each type of education has shops, and the lay public and some educators associate a school shop regardless of its equipment, its teacher preparation, purpose, students, or the schedule of time with vocational education. In addition and to add to the confusion, the general educator frequently defines all education as being vocational whether it is English, history, or industrial arts. As a result, vocational education means one thing to the general educator and

another to the vocational educator. For over one hundred years the federal and state governments have passed legislation providing funds for the education and training of workers. Such legislation set standards and over the years developed a body of knowledges, information, and rules which define vocational education as:

> The education and training for gainful employment in a recognized occupation or field in a shop or laboratory as nearly simulating the physical facilities and equipment of the actual work situation as is possible in a school under a teacher who is qualified as a result of vocational teacher training and adequate practical experience which makes him an outstanding worker in the occupations being taught.

The vocational course of study is prepared as a result of a job analysis and adequate shop and/or laboratory time is scheduled. The time allotted for instruction is determined by the level of skills and knowledges that must be developed to make the individual employable or acceptable to an employer. The science and mathematics are related to the shop or laboratory work and are taught by teachers who by education, training, and occupational experience know how to relate theory to practice.

Vocational education has made significant contributions to the total wealth of information concerning the field of education. These may help to provide the proper educational program for the 40 percent of our population now being missed.

Contribution No. 1: Job analysis--Curriculum is determined by actual needs. Much curriculum development is based on conjecture--people are kept busy and in school, but job performance is ineffective.

Contribution No. 2: Individual instructional material. Example: In a class of upholstering, students are taught to make slipcovers and draperies, refinish furniture, refabricate furniture frames, tie springs, etc. Related science should be incorporated. Art design is needed primarily to get color, line, design, and harmony. Some students may not get beyond learning to stitch after the material has been cut; others may be smart enough to run a business of some kind, so they need business principles and more advanced math to enable them to calculate the cost of operating a business, figuring wages, etc. Learners are not limited to one segment of business. They would be able to sell upholstering equipment and supplies as a profitable business, get into a factory, or work in an automotive area putting tops on cars and repairing upholstery of seats.

Recognition of these individual differences has led to the need for a flexible and diversified program of secondary education.

Only certain types of courses are especially designed and taught to prepare young people for entry into a chosen trade or occupation upon leaving high school. These courses may be offered in vocational departments of comprehensive high schools, vocational high schools, area vocational-technical schools, or post-secondary institutions. Vocational-technical educators have always recognized the obligation to assist in the development of all types of educational programs where professional training and practical experience can make a contribution, realizing that there are many patterns of organizations which can provide opportunities for youths and adults to gain preparation for entrance into or advancement in an occupation.

A sound program of vocational-technical education should meet the following criteria:

1. Successfully prepare boys and girls for entry into a chosen occupation without neglecting the essentials of a sound general education for a worker in modern society.

2. Be flexible and permit high school pupils, out-of-school youths and adults to enter training when ready and able to do so.

3. Accept the responsibility for (a) retraining of unemployed workers, (b) advanced training of employed workers as job requirements or technology changes, (c) related technical instruction of apprentices, and (d) other adult vocational-technical educational opportunities.

4. Pupils should be those most likely to be successful in various occupations not requiring the baccalaureate degree level of collegiate training or education.

5. Provide for a wide variety of exploratory and occupational guidance opportunities.

6. Administered and supervised by personnel who are educated, trained, and experienced in vocational-technical education. They should be able to work effectively with employers, labor, school authorities, employment security, social agencies, and other governmental agencies concerned with worker education and training.

7. Serve a geographic area having sufficient student population to support a day and evening program offering a wide variety of choices of occupational training opportunities.

8. Physical facilities must be adequate and so planned that they can properly provide for the training needs of the students.

9. Teachers must be masters in their occupations and trained to impart their knowledge and skill to the pupils.

10. Curriculum must be based on an analysis of each occupation in order to determine requirements for successful performance as well as effective citizenship.

11. Curriculum must be continuously adjusted to changing conditions and technology using advisory committees to assist in keeping up to date.

12. Provide for the learning of the skills employed in using tools, machines, and materials of the occupation and using them skillfully, safely, with good judgment, and with a pride in good workmanship.

13. Provide for the learning of the technology, related mathematics, science, and art which are necessary for success. Should motivate theoretical with practical.

14. Use of methods, materials, and equipment as nearly paralleling the actual working conditions as practical and schedule sufficient time to conduct the learning experiences.

15. Provide for a systematic evaluation of its effectiveness in achieving goals through periodic review, performance tests and written examinations, and follow-up studies of placement and success of graduates.

16. Flexibility of organization and an administrative, supervisory, and instructional staff capable of and willing to meet national emergency training situations and unusual state or local training demands. (War Production Training and Manpower Training.)

The sixteen criteria are minimal for a sound and complete program of vocational-technical education. Offering one or two classes to a few students or changing or adding a vocational name does not meet these criteria. We believe in high-quality vocational education for any level of employment.

In addition to the criteria, the following suggestions need serious consideration:

1. Increased importance and complexity of programs, problems, and relations with other departments requires a strong division at the State level.

2. Federal funds should be matched dollar for dollar with state funds and priority should be given to allocation of funds for physical facilities and equipment. This cost often deters program development at the local level.

3. Plan should be submitted and dates established for initiating the plan in adequate and approved facilities at the secondary, evening, and other levels necessary to serve the youths and adults. A State Board rule should be prepared to accomplish this.

4. Legislation should be prepared to enable any youth under 21 who wishes vocational-technical training not available in his district to attend the nearest program in the state which will accept him. His local board should be required to pay his tuition.

5. Teacher education and training should be realistic and expanded to meet the state's needs. Teachers will continue to be recruited for skilled, technical, semi-professional and semi-skilled instruction directly from business, industry, and semi-professional areas.

6. Vocational-technical programs conducted in community colleges should be recommended for approval by the State Director for Vocational Education and should be formulated and submitted to prevent unnecessary jurisdictional or administrative problems.

7. Carefully developed and realistic plans should be prepared and instituted for teacher education and training to assist vocational educators in the total effort required to meet occupational training needs.

8. Competent counseling to meet the needs of non-college bound students.

9. Seminars for administrators, supervisors, and teachers in general education concerning the educational organization and instruction essential to providing programs with occupational goals.

10. Follow-up studies to evaluate effectiveness of the programs should continue.

Follow-up studies were a factor that helped to get the Vocational Education Act of 1963 passed. It would be a good idea to select two outstanding students and write a story about their accomplishments. Pictures could be used and information given concerning the program in West Virginia. It might be advantageous to prepare this in booklet form and give copies to legislators.

Effective Communications

Dr. Albert E. Jochen

One of the major problems in working together results from faulty communications. The program of communications must be continuous; it is not only the giving of information, it is a matter of interpretation

of the person hearing or reading the material. Lines of communication must be kept open. True communication is the key to good public relations. The history and development of vocational education could be put in separate newspapers and distributed all over the state. It could appear as a series of articles with pictures, stories, and worthwhile contributions. Good communications keep you in contact with the general public and help you create the kind of image you want.

There has to be communication with state staff members, and they must communicate with U. S. Office of Education and with local school boards. It is imperative that every teacher, supervisor, administrator, and counselor know the aims, objectives, and philosophies of vocational education. It is also important to be able to communicate with students. Ingenuity and creativity determine the limits of communication.

Review
Dr. Albert E. Jochen

In order to experience an interchange of ideas and purpose with general educators, we need to coordinate efforts and familiarize them with problems we are facing.

State Director, Fred Eberle, made a presentation which vividly pointed up socio-economic factors in relation to vocational education and overall growth and development of West Virginia. He projected plans for the future and discussed present problems and needs.

John Lowe, former State Director of Vocational Education, traced the history of vocational education in West Virginia, presenting the struggles, sorrows, heartaches, and trials.

Dr. Albert E. Jochen presented basic principles and philosophies that are affecting the total field of education, without isolating any one area of general or vocational education. As West Virginia's problems are the same as those in other states, the overall picture of the United States was studied. We need broader perspective in terms of job opportunities. In order to provide an effective program, we need to carefully consider the basic fundamental principles of sound vocational-technical education, whether it be at the day, evening, or extension levels of any field. This conference has been conducted in vocational-technical education using the team approach in which the contributions of each service--agriculture, distributive education, office and business, health areas, trade and industrial, technical, and emergency programs such as MDTA and ARA are coordinated with general education in such a way that it may assist and provide the kind of education and training to meet the needs of youths and adults in West Virginia.

Wealth of the local community, wealth of a state, and the wealth of our nation is in its people rather than its resources, provided these people are educated and trained to the limit of their God-given talents, abilities, and intellectual capacities.

Application

Dr. Joseph K. Bailey

The State Plan for Vocational Education identifies the primal responsibilities of coordinators, supervisors, and directors of vocational education:

> A County Supervisor of vocational education shall in cooperation with members of the State Staff provide leadership and direction, organize and conduct programs of vocational education for youths and adults. He shall be concerned with staff and its approval, curriculum, instruction, student selection and placement, welfare, and public information about county programs.

Objectives for the workshop were established:

1. To provide information and experiences from which supervisors could formulate a philosophical foundation and which would familiarize them with principles and concepts of vocational education.

2. To provide a knowledge of the structure of vocational education in West Virginia.

3. To develop essential guidelines, procedures, and knowledge for planning, implementing, operating, and evaluating county programs of vocational education.

4. To facilitate the planning of a projected program activities of vocational education for each county represented.

All vocational programs in each county are under the auspices of the County Supervisor. Any service supervisor working in the county should contact the County Supervisor. Coordinators, supervisors, and directors should be able to prepare a philosophy, a set of beliefs, observe programs in operation, evaluate, and, if necessary, redirect the current programs in order to obtain quality that is going to serve the citizenry of these counties.

Geographic structure, population, attitude of the people, economic affluence, and many other factors limit program expansion.

The challenge to analyze, search, and discover program opportunities has been given.

Summary of Selected Presentations

Second Conference

February 14-18, 1966

Cedar Lakes

Relationships of Session One to Session Two
Dr. Albert E. Jochen

The passage of the Smith-Hughes Act and the condition of our prosperity were factors that brought terrific pressures on Congress to set up an educational program that would train people to be productive in the industrial complex which was beginning to grow. Productive citizens are necessary in any democracy if it is to maintain its independence in a world where economic factors in many cases determine the destiny of nations.

Today, the occupation dictates what constitutes a vocational course. As occupations change from day to day and year to year because of influences, the curriculum must change. Subject matter should be related to the abilities of the individual and the career goal that person is going to attain. Historically, vocational education stems from needs that were not being met in the educational program. We did not get into the semi-skilled areas earlier because of the lack of money. Good vocational educators had established programs from the semi-skilled up to the highly technical. Internal and external cooperation within the community are essential to make a useful job analysis. Equipment, trained teachers, and research are vital to the vocational program. Each area has been challenged to meet vocational needs, and we need to work together as a team in developing aims, objectives, and philosophies.

The Team Approach to Program Planning
Dr. Albert E. Jochen

Team approach is the inter-cooperation of each vocational field in the education and training of people for work. Home, industry, and research are all involved in the pooling of resources. As the home is the foundation of democracy, the change that has taken place here has to be studied in order to evaluate the curriculum. A curriculum must be realistic in terms of meeting today's problems.

The home economics program needs to be expanded. Knowledge of the occupational training aspects and possession of skills have not been included in this field as many of the teacher trainers attend high school, go to college and major in home economics, graduate, and then teach. A large number have not had the kinds of experiences either in college, at graduate school, or in actual work to assist them in developing and teaching occupational curricula. It is quite possible that the people who are going to get into the occupational areas in home economics, trades and industry, and agriculture are going to come through industry. In order to present honest educational hurdles in our teacher-training programs, the college would be responsible for coordinating these necessary learnings with course offerings.

The 50-year span between 1916 and 1966 saw a tremendous change in industry. The industry of 1916 was essentially an owner-operated one. Today, the ownership is absolutely absentee, and is concerned about you only in terms of your ability to produce. Improvements have been made, wages are a little higher, working conditions better, and there is more to

show at the conclusion of life's work period. Vocational and general educators must plan together. An occupational program, grades 9-12 may be offered. Peripheral, related, and ancillary subject matter are needed in addition to the occupational skills. Curricula must be developed. Experimental programs could be started in areas with sufficient population to offer assistance to others.

In 1916, the technique of research was essentially one of trial and error. It is now recognized that you must have mathematicians, physicists, chemists, biologists, and technicians serving as a team to solve a particular problem, and the team gets the credit for the accomplishment. Program development should take the team approach. Research is speeding up the process from invention to application. From a teamwork standpoint, we must know what is going on in the home, in business and industry, and in research.

Vocational people should enroll in a course periodically, organized around one particular subject; such as communications and transportation. Educators must be leaders and they should be able to anticipate and project.

Vocational educators are concerned about dropouts, the physically and mentally handicapped, and the unemployed. We are becoming our brother's keeper. We are concerned about the effect of changing standards for job entry. A person who became an auto mechanic or electrician 15 or 20 years ago might not be able to enter the field today.

The team approach is essential because vocational education that is sound, effective, and will stand up to evaluative criteria is inseparably and exorably married to two fundamental principles which make it different from general education:

1. We are compelled to develop curricula from up-to-date analyses of occupations to determine skills required, related technical and general knowledge. The organizational pattern for the development of vocational education is not so important, but whether it be in a comprehensive high school or a separate school, the organization must have a thorough and sound understanding of these principles in terms of developing the analyses.

   We need to know the job objective of the individual. We must assist him in living in the community, living at home, and working. Moral principles should be emphasized in terms of making the individual receive fulfillment and the feelings of personal worth through moral standards and good and acceptable codes. Human resources should be fully utilized, stressing the dignity and the worth of the individual. A course could be offered covering the cohesive forces necessary to tie our society together in common purposes, and this would encourage cooperation and teamwork.

2. We have to develop instructional material, aids, and devices to assist the teachers to meet the individual needs of students so that they may progress at their own rate of speed and jump honest educational hurdles.

Neither of these principles is taught in teacher training institutions. We need individual instructional materials and a course outline which is realistic in terms of the goal of the individual. The ultimate goal would be for each student to attain his career objective. It should be a quality status program, but status and quality should vary with the individuals and not the capacities. This takes a different kind of approach, a different kind of understanding, a different kind of teacher concept and philosophy. Making worthwhile contributions to the total situation create understandings for the need of inter-jurisdictural cooperation, and creates the climate for a team approach. The following current problems in program planning could be discussed in a workshop:

1. Occupations that cross over and involve a number of fields.

2. Sales and services of farm equipment.

3. Related subject areas.

4. Composition of the vocational team in your area.

5. High school college preparatory student that did not go to college.

6. The geographic area that the school serves.

The Team Approach to Program Promotion

Dr. Albert E. Jochen

Program promotion should start at the local level of education and include training that will result in profitable employment. Educated Manpower Hope of the Present - Promise for the Future was developed and proposed after a great deal of planning, involvement, and work had been done. The promotion or lack of promotion of this program could make or break the total effort. State staff needs to be educated and informed so that there will be an interchange of understanding and ideas between each one of the fields and among the various fields. General educators and special educators must be involved. Vocational state staff should get together and familiarize themselves with the total picture. For example: Organize a committee of the staff and plan series of meetings, one each week. Staff conferences could be held every Monday morning going through until lunch time. Plan to have lunch together. Each service person could be told to make a clear statement as to aims, objectives, philosophies, and list the services performed. This would spotlight worthy contributions made in school and outside the school. Problems in the State Department and some at the local level could be discussed. Field trips could be arranged to observe effective programs. This creates more understanding and more respect for the other person's work. Thip type of operation could lead to improvements in many areas. In one case, a county vocational school with a county-wide program of welding was started. With a series of planned meetings, the combined effort develops a better relationship and there is an interplay of ideas and philosophies.

At the state level, orientation of new people coming into the department is a problem. With some understanding the total operation may be improved. The knowledge and power in the state staff should be utilized. This involvement leads to the vital and important feeling of fulfillment.

Promotion is one of the first steps for action. There has to be a general idea as to aims, objectives, and philosophies--a position paper. In pooling intellectual capabilities, problems are brought to light. Improvements are made in the curriculum area as development of instruction and courses of study are more realistic and meaningful. A curriculum laboratory could be established to experiment and develop courses to share with other schools, to exchange materials, and to discuss matters regularly and critically.

The development of a course called "Aims, Objectives, and Philosophies of Vocational Education" could provide answers concerning vocational education. This was done at Rutgers and proved to be very successful. It was given at the graduate level at no cost to local administrators who wanted to take it. Enrollment was limited to superintendents of schools and it was a three-credit course.

Administration is the key for the promotion and selling of a plan. If the administrators have the right kind of philosophy and understanding along with initiative, a good educational program will be developed.

If vocational education is thought of in terms of a punch press operator or single skilled individual, we are not communicating properly. Field trips could be arranged to observe effective programs. Vocational counselors need to familiarize themselves with each area by visiting schools and industry. They would be able to make contacts, observe students at work, and talk with them to get some idea as to what was necessary for them to be successful in their particular jobs.

At the local level, administrators should realize the importance of good planning. Meetings must have a major purpose, carefully planned with some objectives and long-range plans. Staff meetings should be planned to get the whole force to work as a team and see their relationships to each other. They should pool their respective resources to make a better educational climate for all the students in school. Administrators need to know the backgrounds and the abilities of teachers in order to encourage teamwork. The skill instructors have doctorates in service skills, and knowledge of course content and skills is worth just as much as that earned by the academic teachers in college. In order to sell this, you must believe in it and you must know what this person is doing in vocational education.

The climate must be developed among the educators for a united front before trying to sell a program to a community. County supervisors should establish their goals and list the steps necessary to attain them. You cannot get community involvement in promoting the programs until you, as educators, are sold on it. The total staff needs to be well-informed.

The Team Approach to Program Development

Dr. Albert E. Jochen

Programs are developed because of pressures from people with needs or by a vocational director who conducts a survey. Making a survey entails visiting industry and business and contacting young people. Addresses from school records may be used to contact out-of-school youths. They are classified as:

1. Dropouts

2. Graduates, but unemployed

Opportunities as defined in the Vocational Education Act of 1963 must be covered to embrace everybody in a total program. When business and industry are surveyed, it is important to determine needs in terms of occupational opportunity or placement.

In every community there are certain groups of federal agencies involved in the social problem of dropouts, and it would be most advisable to have a coordinating committee to assure effectiveness.

Organization is important. Teachers will be involved and their inadequacies in guidance will be noted. Questionnaires will produce parent and student involvement. As parents become interested in learning something more about vocational education, they will also want to know something about the guidance and effectiveness of this program at a particular school. It is necessary to get a format of reaction within the community concerning the whole problem of occupations. An education should make it possible to provide experiences through actual participation. A high school diploma or a college degree does not automatically open the door of opportunity.

It is essential that an individual should not be deprived a good education in the so-called academic areas because he is going to learn an occupation. Curricula should be adjusted to include whatever is needed in order to have the student achieve successfully in his chosen occupation. The greater earning power and the income of an individual determines the productivity of the community in which he lives. Student interest, mobility of the work force, and employment agencies should be involved in program development. Parents need to confirm the occupational choices of the young people. Students should be taught about their environments and immediate job opportunities that might look wonderful from the pay standpoint but might result in blind alleys in terms of long-range employment. Anticipation is another important facet of program planning. There are three basic premises on which programs shall be established:

1. Equality of educational opportunities.

2. Vocational-technical education programs as an integral part of the main stream of the total program.

3. Provide each individual an opportunity for advancement to highest potential.

The program should be developed so that it is flexible and will fit into the general educational program. It should be scheduled realistically to present honest educational hurdles that are necessary and essential. Since the vocational educator is involved personally, he develops a plan of approach and involves the administration, including Superintendent, Board of Education, supervisory personnel, teachers, businesses, parents, students, and out-of-school youths. Indirectly, involvement includes teacher trainers as teachers are going to be doing this specialized skill training.

The State Department can assist in having a clearinghouse of course outlines and courses of study. Some of these could be modified to suit your own programs. The State Department could aid in the structure and development of a county-wide survey. If a subject is desired by a few people in several different areas over the state, it could be offered at a statewide level. The nature, skills, and abilities in each county should be explored.

Techniques in the Development of Vocational Curricula and Instructional Materials

Dr. Albert E. Jochen

In differentiating vocational education from general education, the two most utilized techniques are:

1. Develop course from job analysis. This is a realistic approach and is possible in the development of the total educational program, including the academic areas.

2. Individual instruction techniques and group techniques of instruction.

Job analysis technique is being forced on the vocational people and when they came into education they came in without any kind of customs or traditions. Individual instruction and development of course outlines were the result of the inability of these people to know any other way. This is the key to the development of a program to meet the needs of all the people. Dividing the job into logical units is the basic approach in job analysis. Each unit should build on the other one in terms of skills and abilities sought. Unrealistic curricula which create false standards result in dropouts, failures, and frustrated teachers. Students should have the math and science that will be necessary to do a particular job. This puts the honest educational hurdles in the course outline. Successful programs are composed of the following elements:

1. Interested students with desire to get jobs

2. Essential training

3. Individual instruction sets priorities on activities

4. Experiments with different types of curricula and teaching methods

The Orientation of New Teachers

Dr. Albert E. Jochen

The method of orienting new teachers will help to determine the quality of teaching. Some teachers enter a school system and get a few brief introductions, a key, shown where the room or shop is, and perhaps a course outline. In New Jersey schools, a short course was utilized where vocational education was defined, teachers were introduced, and everyone received a copy of all course outlines in the whole school. Those sessions provided the historical sketch, philosophy, social relationships, vocational adjustments, curriculum, guidance, professional growth, and teacher orientation. In the second session they learned about the community, the county, and the particular area of the school. Administrative and supervisory organization of the school was discussed at session three. Lines of command, teacher ethics, sick-leave, leave of absence, contracts, teachers' ratings, pension fund, salary schedule, teacher responsibilities, certification, methods of renewal of certificates, and professional improvement were reviewed.

The lines of communication should be kept open to improve instruction. Other topics of interest to new teachers were discussed: instruction through formal courses, summer work, reading of trade journals, records, how to keep registers, marking methods, preparing requisitions, permanent record cards, methods of conducting inventories, tardy slips, progress charts, and safety instructions.

A unit was prepared on human relations between principal and teacher, the teacher and the program, and the teacher and the pupil. Curriculum covered the development of internal discipline, work habits, and attitudes. Information was provided concerning teaching aids, instruction sheets, film strips that were available, slides, films, charts, models, etc. A bibliography of materials that were available in the library of each school was part of the brief orientation program that took three to six hours.

Classes were set up for evening school teachers. This short methods course enabled them to get a fifty cents an hour raise. Better teachers were encouraged and more experiences for supervision provided.

In-Service Teacher Training and Its Coordination With the Statewide Program

Dr. Albert E. Jochen and Fred W. Eberle

Fred W. Eberle: We need to recognize the demands of society and recognize our responsibilities for keeping abreast of the times. It is necessary to keep up to date, plan, and structure a program of self-development. The problem of in-service training is not unique to vocational education. There are formulas that rate the capacity of an individual in industry, but the measurements for in-service training are a little more difficult. Vocational education brought into the horizon of education the fundamental principle of extension as it relates to

work. Experiences in working with business, industry, and home should enable us to perform the necessary tasks with regard to improving the professional performance of our staff. This gives emphasis to a sound psychological fact that learning is continuous growth that goes on with or without plans.

We have been concerned about the population explosion and what it has meant to the United States, the technological explosion and what it has meant to business and industry, and the knowledge explosion. Changes taking place in the world of work are causing many people to become obsolete. It is our responsibility to reduce obsolescence among teachers by directing our purposes to updating and upgrading vocational educators, primarily through in-service training. There are two kinds of teacher training: Pre-service and In-service. In-service training can be defined as a means of providing a sequence of experiences that are designed to improve the vocational teacher's competence so as to provide quality vocational programs. There are three major types of leadership: autocratic, democratic, and laizze faire. Our knowledge of those three types of leadership is very important as it can become a tool in the involvement of people. In order to jump hurdles, educational or otherwise, training perfects the ease of the action. First, we must be in condition. Secondly, we must be able to see the purpose or reason; otherwise, the jumping would be useless. In getting into an in-service training program, we must consider:

1. Instrument or device in which we will have the various competencies, abilities, and areas of weakness or strengths that we are going to identify. This instrument, thoroughly prepared, coupled with observations of teaching and around a self-appraisal by the teacher should give you the basis on which to develop an in-service training program designed and geared to the individual.

2. Reading with a purpose is a means of in-service training. Teachers need to continue the process of education, to be back in the receiver position.

3. An association of the good with the weak is needed to balance the endeavor.

4. Whatever problems are, they should be discussed with all who have contact with vocational student.

5. Lesson planning and the establishment of objectives are problems. The Richards formula measures performance and as a result gives step-by-step technique in identifying elements of performance. What are the manipulative skills that a teacher needs in order to transmit his skill and knowledge that he has acquired over years of effort and study? What general knowledge is necessary for him to transmit this kind of skill to students? What about all the related disciplines for a better understanding of the teacher learning situation?

6. Judgment--Making decision as it relates to what should be taught. There is more content than you are possibly able to put across in the time that is available.

7. Morales--What is going to be the feeling of the people as to experiences in a teaching-learning situation?

Interpret the needs of the people, apply a yardstick of activity, and out of that measurement come up with a series of experiences that are designated to improve performance to assure you and the student of a high-quality program. Examine teacher education programs and see what steps we need to take in the designing of a series of experiences that will be worthwhile to teachers.

Dr. Albert E. Jochen: Job analysis is the first step in conducting in-service teacher training. Vocational education is constantly in a state of flux and is influenced by a wide variety of factors. After analysis is made, the next step is allocation of time in proportion to real needs, responsibilities, and values of the areas in which you are working. Supervision is the improvement of instruction. This role requires a master teacher. A good teacher can be a poor administrator or supervisor.

A good principal visits in the various shops and classrooms and offers assistance and encouragement. One principal planned a pattern of observation by starting with a group of students in the morning and staying with them throughout the day. Then he arranged for some of the other teachers to do this while he kept their classes. As a result of this, an in-service training program was developed for the teachers. Planned visitations by staff members were encouraged. Teachers visited an outstanding shop, class, or laboratory and the knowledge gained was brought back and discussed. Every teacher had an opportunity to get out into another school system. There is a need for coordination between the state department, teacher training and the local school system. New technologies and new mechanical processes are presented in an in-service improvement program. A good orientation program should be developed and new teachers as well as those who have been teaching could be brought in to benefit from demonstrations. Teacher trainers could hold a session or you could utilize a teacher with outstanding ability who would enjoy giving a demonstration. Recognize your weaknesses and strengths and get the necessary balance. Enlist assistance from interested people on your staff.

Coordination of Shop, Related, and General Instruction

Dr. Albert E. Jochen

Workshops and training sessions help to improve instruction. Coordination should be developed in order to orient the total staff to the total program. Social, personal, and vocational competencies are developed by honest educational hurdles. Every single area of instruction is important because it contributes to the student's fulfillment. Carefully planned teachers' meetings and improved teaching methods help in the coordination of shop, related, and general instruction. It is an enlightening experience for academic teachers to visit the shop and observe the work of some

of their students. Reading trade journals and working out a routing slip directed to the machine shop instructor would prove their interest in the total program. Supervision is a magazine that presents personnel problems and keeps you up to date on labor legislation.

Suggestion: Related and academic teachers go through a shortened ninth year program. This could lead to a change of curriculum.

Use evening classes for the purpose of developing competency on the part of related and academic teachers.

Develop a format for writing the instructional material.

Program Evaluation

Dr. Albert E. Jochen

Pointers for teachers:

1. You should take nothing for granted.

2. Get a system of understanding of as many students as quickly as possible. Be one of them, but yet hold their respect, friendship, and trust.

3. Remember, the students will never play any more fairly than you play.

4. When you are wrong, admit it and correct your error.

5. Never request the student to do that which you cannot or would not be willing to do. Do not be in a hurry to leave school.

6. Let the student feel that you can be found at the school.

7. Never make any threats or promises which you know will never be carried out.

8. Read wisely and widely.

9. Never cut a student short. Learn to be interested even when you are ready to drop from exhaustion or from sheer boredom. Nothing to you could be life's most perplexing problem to the child at the time.

10. Stand on your own feet. Do not give up too easily or too soon. Learn to solve your own problems and do not ship them off to the principal or someone else in the school.

11. Always remember that the easiest thing to do is to excuse yourself when you are teaching by saying that the child has a low IQ and is hopeless.

12. Anyone can have a child expelled or transferred. Be the exception in trying to aid the child in making an adjustment.

13. Try to accomplish one real fine thing each year in your class in your extra curricular activities.

14. Develop a good sense of humor. Divide the responsibility of routine matters among the students and get them in the habit of assisting. Make them feel important.

15. When you get to feel self-satisfied with yourself and you really think you are good, enroll in a professional improvement course, visit and observe good teachers and invite good teachers to criticize your efforts.

16. If after a fair trial you decide you do not like teaching, do the students and yourself a favor and resign.

One of the guiding factors of the Vocational Education Act of 1963 is the requisite of evaluation for every program. Is the program educating and training the individual for profitable employment and developing the personal, social, and professional competencies?

Publicity is important. Let the people know what is being done in vocational education. Take the graduates in the state and calculate the average hourly rate of pay they are getting in the fields in which they are receiving training and multiply the number of hours in a work week by the number of work weeks in a year and you have material for a newspaper story. (Last year we graduated _____ number of students whose combined income was _____ number of dollars.)

Criteria:

Job placement is a sound way to evaluate your program. Administration entails the type of system, area wide, single purpose or self-contained, or comprehensive high school. Whatever type is used, there must be a good working relationship and people who understand thoroughly what you need to know to develop a good vocational program. Administrative officials should have an understanding of aims, objectives, and philosophies of vocational and technical education. They should believe in and support a sound program of vocational-technical education. Lines of command should be such that promotion would be provided. Competently and vocationally qualified people should be in charge of the program. Personnel should be appointed upon recommendation of qualified leaders, and the administration should believe in encouraging and promoting sound coordination between academic, related, and shop teachers.

A policy of educating or informing the board of education concerning aims, objectives, and requirements of a sound program which meets needs of the community and a sound coordination program among all occupational preparatory programs should be followed. Representative advisory committees should be utilized. In-service professional improvement should be encouraged.

Administration should plan and conduct meetings for the entire staff with a plan for constant evaluation and reorganization of curricula in the line of daily supply for research, study, and survey. Administration should be aware of the importance of good public relations and the dissemination of good school relations within the community. Adequate and proper supplies and up-to-date equipment should be provided as quickly and efficiently as possible. Sound guidance prior to selecting and entering vocational and technical education programs is essential.

The courses should be kept up to date through a planned program of revision in the light of socio-economic, mechanical, and technological systems. Scheduled time for the skills and related subject matter is based upon what is required to educate and train for occupational competencies rather than for the convenience of the schedule.

The State evaluation will probably be confined to the aims and objectives of the State Plan. Federal educational agency will be concerned with the effectiveness of your program on a basis of established criteria. It was suggested that two pilot counties be chosen and evaluative criteria used to check the activities.

In trade and industrial education, an individual survey in a given community would provide more information to judge a particular program. Here is a general checklist for evaluation:

1. Vocational students receive same instruction in academic areas except not as intensive or extensive.

2. Academic courses of study vary according to the needs and abilities of the vocational students.

3. Schedule time allotments in the academic area vary with the needs and abilities of the vocational students.

4. Close coordination between the academic and vocational training.

5. Vocational and academic teachers brought together to discuss and work on mutual problems.

6. Academic teachers aware of the fact that the vocational students need to be motivated by the practical to learn the rhetorical.

7. Academic teachers have an understanding of the aims, objectives, and philosophies of the vocational program in their school.

8. Academic teachers utilize some of their unassigned time to visit vocational areas to learn about the work being done.

9. Academic teachers properly oriented to the role of vocational education in the school system.

10. Conscious effort on the part of the academic teachers to use shop work which the vocational students produce as a motivating force in their subject area.

Research in Vocational Education

Dr. Joseph K. Bailey

The greater the decision we have to make, the more we apply the principles of research. Vocational educators are responsible for preparing students for employment. Fifteen percent of high school students are now enrolled in vocational education. Approximately 60 percent graduate from high school and about 18 percent enter college. Industry spends about 10 percent of gross income on research and 15 percent of the federal tax dollar is applied to research. Francis Lanni, Director of Research, U. S. Office of Education, expressed concern at the lack of educational research as we are on the threshold of a revolution in our schools. As we are responsible for the occupational placement for those we train, programs must be based on sound principles, methods, techniques, practices, and needs which have been tried and proven.

Factors limiting the enhancement, enrichment, and improvement of vocational education:

1. How can valid follow-up data relative to vocational students be obtained? How can this data be used to improve programs?

2. What are the current, emerging, and projected employment opportunities in your county, area, and state?

3. What is the role of vocational education in creating employment opportunities?

4. How can the image of vocational education be improved?

5. What are the employment opportunities for the socio-economically handicapped for which vocational education could prepare?

6. What competencies are needed for successful entrance and continued employment?

7. How can vocational guidance be effectively utilized to facilitate career choice?

8. What are the most effective methods, techniques, and procedures for teacher preparation?

9. What is the role of vocational education in preparing for citizenship?

10. How can the recruitment and selection of potential vocational teachers be expanded to meet teacher needs?

11. What programs are feasible with two or more services cooperating?

12. What programs are possible for the underemployed (marginal farmers)?

13. How can federal and state funds be most effectively and efficiently utilized to promote and implement vocational education?

14. What are possible vocational education programs for sparsely populated rural counties?

15. What are the in-service education needs of vocational teachers in your county, area, and state?

16. How can the attitudes of general education administrators toward vocational education be made more favorable?

17. Would mobile units to provide occupational instruction in selected communities be feasible?

The answers to many of these questions would help in the development of better programs. Program adjustment and development can no longer be based on what someone likes, knows, or in which he is interested; but it must be based on principles, methods, techniques, and practices which have been tried and found to be effective and which ultimately prepare the students for employment.

Three percent of the state's federal allotment shall be used for ancillary services such as research, guidance, curriculum development, in-service development, and teacher training. These funds, of course, must be matched by local and/or state funds. If our allotment is two million, three percent of this amount would be $60,000. Matching with local funds would increase this to $120,000. A significant amount of this is being used for research. A few counties have requested full or partial funding for projects:

Wood County - in-service training for vocational business teachers.
Wetzel, Brooke, Putnam, Mason, Jackson, Logan, Clay, Randolph, and Eastern Panhandle - appraisal of vocational education needs and opportunities.
Marshall University - appraisal of post high school vocational and technical education in Logan and Mingo Counties.
West Virginia Institute of Technology - study of technical education needs in West Virginia.

At this time we have approximately $25,000 of 4(a) funds remaining with which to match local funds and a new year's allotment will be available July 1, 1966. Second source of revenue is 4(c) and these provide funds to pay the full cost of a research project. Ten percent of all funds under the Vocational Education Act of 1963 are reserved for awarding grants for research, training programs, and pilot, demonstrational and

experimental projects on the national level. No county has expressed interest in these projects, but the state has submitted three:

1. Leadership and Professional Development of County Supervisors of Vocational Education in West Virginia.

2. A Pilot Project to Prepare Technical Instructors by Providing Professional Education and Occupational Experience to Graduates of Two-Year Terminal Technician Programs.

3. A Demonstration of the Cluster Approach in Preparing Youth With Diverse Capabilities for Employment in Electrical-Electronic Fields.

The vast area of research can be of vital service to vocational education as much of future programs must be based on our findings. There are funds for research in West Virginia. We should have projects at the local, county, area, and state levels. There seems to be little or no excuse for leaving questions unanswered or the problems which limit program expansion unsolved.

Guidance, Placement, Follow-Up

Dr. Albert E. Jochen

This is truly an evaluation of the program. A cardinal principle was that the individual in the program had to profit from the instruction. Honest educational hurdles should be detailed and a variety of guidance opportunities provided for young people. The ninth year program would be one way of doing this. The booklet, "Consider Your Future," is a very good way of promoting the program. Materials concerning each trade could be studied and discussed with parents, teachers, and counselors. Visits to establishments to see trades working would help to make decisions. There is physical and mental strain upon those whose jobs have little or no security. Successful, happy living requires careful planning and study. Success stories and pictures from graduates would make an impressive booklet. Tests do not measure potential and even the intelligence test does not help much. The main quality or attribute necessary for success is concrete thinking ability.

The Vocational Leader and His Personal Professional Growth

Dr. Albert E. Jochen

As a leader in education, especially vocational education, you have absolute and complete control over your personal and professional growth. The key to effective programs of education that will meet the needs of the in-school and out-of-school youths and adults lies in the team approach on the part of all educators, general and vocational. All must know the aims, objectives, and philosophies of co-workers. An interchange of ideas is necessary. The article, "Today's Youth in a Forgotten America," in United States News and World Report, brings out the 40 percent missed in our educational system.

Growing professionally requires planning. A planned reading program in a wide variety of areas--political, social, art, special fields--will provide learnings about the outside world. We are highly technical people so we must read into the political and labor management areas to be informed. We should visit schools, industry, business, and research centers and plan for conventions and conferences. Educational leadership provides for open lines of communication. We need to expend extra energy and effort to make learning more enjoyable and more meaningful which will improve the educational system. It does not always require a great expenditure of money, just an expenditure of effort to experiment with an idea for improvement. Using some ingenuity, we could do a great deal in the field of selecting the right job.

Summary of Second Week

Dr. Albert E. Jochen

Major function of this session was the team approach in program planning, promotion, and development. Those engaged in academic, related, technical, semi-professional, skilled, administrative, and supervisory areas have to know the aims, objectives, and philosophies of all the other people. Vocational curricula need to be developed from an occupational analysis to get honest educational hurdles. Individual instructional material is a fundamental principle in sound vocational education. Course outlines properly developed, instructional materials utilized, adequate facilities, and teachers oriented, educated, and trained to become part of the team comprise a quality environment for vocational education. The local director has the duty of improving instruction and developing a climate in which the program can flourish. The various diverse elements in education, including the thinking community, industry, and business, must be coordinated. Honest educational hurdles must be developed to challenge the abstract, concrete, and social intelligence of the individuals. Placement, follow-up, and direction for further education for improvement should be provided through outstanding leadership.

Summary of Selected Presentations

Third Conference

March 14-18, 1966

Cedar Lakes

Role and Responsibilities of County Supervisors of Vocational Education

Dr. Joseph K. Bailey

As an employee of your Board of Education, you are indirectly an employee of the Vocational Division. The State Plan makes provisions for a portion of your salary to be paid by this division. This year that rate is approximately 50 percent. This financial arrangement does not mean that the state wants control over local programs. Our position is one of incentive and service which will bring about quality programs of vocational education and requires cooperation, loyalty, and efficient use of resources.

FUNCTIONS OF COUNTY SUPERVISORS

1. Prepare a philosophy and objectives of vocational education acceptable to administrators and vocational teachers.

2. Organize and operate a vocational education program based on the philosophy and objectives of vocational education.

3. Select and/or recommend teachers of vocational education and related subjects.

4. Assign duties, delegate responsibilities, and evaluate performance in terms of the objectives of a sound vocational education program.

5. Prepare financial budgets and other estimates of needs and requirements of a comprehensive program of vocational education.

6. Evaluate the need for and requisition a great variety of equipment, tools, supplies, materials, and services required to operate the program.

7. Prepare many types of special reports to county superintendents, board of education, and the vocational division concerning the vocational education program--its present status and probable future development.

8. Supervise the operation and maintenance of a great variety of complicated machinery and equipment, often hazardous and always costly.

9. Ascertain building requirements and prepare specifications for new facilities and equipment, and plan for the replacement of worn-out and obsolete equipment.

10. Recruit new pupils, select those qualified for training, and see that they are classified properly in terms of previous training, abilities, interests, and needs.

11. Organize a workable and economical schedule of classes and prepare programs which conform to all requirements of state and local regulations for general and vocational education.

12. Provide for a year-around schedule which meets the requirements of vocational education.

13. Make the objectives and philosophy of vocational education vital and meaningful to faculty and pupils.

14. Operate a guidance program which provides educational and vocational guidance and placement and follow-up services based on the purposes of vocational education.

15. Formulate a curriculum policy and organize courses of study designed to accomplish the goals of vocational education.

16. See that courses of study and instructional materials are kept up to date and are consistent with the actual training needs in the occupations for which preparation is being given.

17. Supervise classroom and shop instruction to assure that instruction is kept at a high level of quality and is directed toward the objectives of the vocational program.

18. Provide for related instructional services (library, visual aids, and the like) needed for vocational education program.

19. Provide for and recommend the proper kind of in-service training needed by a vocational education faculty.

20. Carry on a public relations program which keeps the general public well informed concerning the aims and accomplishments of vocational education so that public support will be continuous as the program is developed and improved.

21. Continuously evaluate all aspects of vocational education in order to maintain quality programs.

The following relationships should be established and maintained:

1. Contact employers, labor leaders, parents, and the general public for purposes of recruitment, placement and follow-up of graduates, evaluation, and publicity concerning the training facilities available at the school.

2. Contact other personnel within your school system, supervisors, supervisory personnel, and administrative and guidance personnel relative to curriculum matters, financial matters, production work, and the needs of the vocational education program.

3. Contact personnel in neighboring school systems for purposes of dissemination of information concerning the opportunities in the vocational education program.

4. Meet with state vocational personnel in order to consult with them about program and its development.

5. Serve on many educational committees, councils, and survey teams relating to vocational education in addition to the usual professional activities of school personnel.

6. Belong to and participate in the programs of many vocational education professional associations in addition to the same professional associations to which all educational personnel belong.

Supervisors' Specialized Knowledges:

1. The history, philosophy, and scope of vocational education.

2. The literature of vocational education.

3. State and Federal laws and regulations relating to vocational education.

4. Occupations and trades--personal knowledge of a trade or other occupations as a result of work experience.

5. Shop organization and management; equipment, tools, supplies, materials, mechanical and electrical services for vocational shop operation.

6. Special building needs for vocational education.

7. Industrial and labor relations.

8. Local industries and business establishments--their employment policies and working conditions.

9. Local labor unions and their policies.

10. Area school personnel to be contacted when recruiting pupils.

11. Public relations techniques for promoting vocational education.

12. The important relationship between general education and vocational education and how to coordinate these two phases of his program.

13. How to evaluate a vocational education program.

14. Schedule making for a vocational high school.

15. The preparation of trade analyses.

16. Course of study and curriculum development for a vocational education program.

17. Relationship between the shop courses and the related subjects.

18. Teaching methods and lesson planning adapted to vocational education.

19. Shop safety and shop safety education.

20. Industrial standards.

21. Production work problems in the school shops.

22. Vocational teacher education.

23. Psychology of learning, with special reference to the learning of trade skills.

24. Pupil selection and placement in vocational courses.

25. Educational and vocational guidance, job placement and follow-up methods.

26. The social and economic levels of vocational pupils.

27. Educational tests and measurements adapted to vocational courses; aptitude testing.

28. Grading and promotion policies adapted to vocational schools.

29. Basic techniques and tools of research.

Those supervisors who accept responsibilities, obtain and maintain the essential relationships and competencies will build 'lighthouses' of vocational education.

No one job description could be applicable to all as it would need to be adapted to the local situation.

Supervisors' Annual Report to Superintendent and Board of Education
Dr. Joseph K. Bailey

The County Board of Education has entrusted to the supervisors:

1. Various physical facilities, possibly worth several hundred thousand dollars.

2. Equipment and materials to make these facilities functional.

3. Personnel - instructors and guidance counselors

4. Funds

5. Students

Therefore, you should utilize many different media in keeping your superintendent, board, and public informed.

An Annual Report is a document which portrays:

1. What has been accomplished in vocational education during the year.

2. A projection of where vocational education should go the ensuing year or years.

3. The resources needed to attain objectives.

Areas for discussion:

1. Do all of you agree that some type of formal annual report should be prepared and submitted to the board?

2. What are the objectives of an Annual Report?

   Record of your accomplishments
   Progress report to board
   Inform board of need and objectives

3. Format

   Foreword
   Progress Report
   Enrollment and Courses
   Personnel
   Guidance and Placement Services
   Expenditures
   Adult Programs
   Projections and Needs

4. Principles

   Report should be prepared in an attractive, informative easy-to-read form. Varied techniques:

   Charts
   Graphs
   Pictures

   Give credit for all persons, agencies and school departments giving assistance to vocational education.

   Involve staff in preparation of report.
   Report facts and accomplishments.

Teacher Education

Claude McGhee

Teachers must be prepared to develop vocational programs with emphasis on occupational knowledges and skills to serve as a basis for more specialized vocational-technical preparation at the post high school level or on the job. This calls for an expanded and broadened program of teacher preparation.

In 1914 when the Commission on National Aid to Vocational Education was formulated, this statement was made, "that the development of vocational education along the right lines will depend largely upon the ability to secure and retrain well-trained teachers who have a thorough and practical knowledge of the subject." Every major act since then has provided for teacher training, whether it be in-service or pre-service. West Virginia has been a leader in providing legislation that would cause teacher training institutes to require a contract with the county and to have the cooperating schools for a student teaching program approved by the state department. Home economics, agriculture, business, and distributive education require some student-teaching before entering the service; this is a systematic planned endeavor where the supervising teacher is well selected. Marshall University and some of the other teacher-preparing institutions are presently farming out their teachers.

Clifton Detamore:

A valuable in-service training program is offered in trade and industrial education. A three-hour course, without college credit, is given at Marshall University. A new teacher will pursue a two-semester-hour teacher training course during the winter while teaching and a three-hour course at Marshall during the summer. By the end of four years, he shall have earned twenty semester credit hours and is issued a first class certificate. When this certificate is received, the pay is equal to that given for a baccalaureate degree.

Maryland has a good plan for the trade and industrial instructor. Before he is allowed to enter the classroom, he must have earned 10 college credit hours from the University of Maryland. Prior to his entering a vocational school, he is put on salary and sent to school in the summer. He is encouraged to continue with his education through extension courses in the summer, but he must pay his own expenses. When he has completed 60 hours, he receives his first class certificate and is paid on this basis. At the completion of 90 hours, he receives another certificate and the pay schedule is the same as that for a BS Degree. As he gets additional work, he receives a pay increase to equal a Master's Degree. With this much schooling it is believed that he will continue until he receives his BS Degree in trade and industrial education and fulfill the requirement of six years' experience in trade and industrial education.

West Virginia needs to examine teacher training and upgrade the program to a level of college credit.

Techniques in the Development of the Vocational Budget

Fred W. Eberle

The budgeting role is related to planning, operation, and control. We need to develop a continuous system of control through which can come effective planning and operation.

It becomes necessary for those involved in budgeting to have some concern with the format of the county budget. Transactions may fall in one or two dimensions; first, by nature of the expenditure, and second, by the organization responsible for the actions. When you report transactions, you pinpoint the responsibilities for the dollar consequence. One of the things that prompted this conference was the experience encountered in budget making.

Your budgeting process could involve three phases:

1. Pre-planning
2. Budget preparation
3. Control of operation

Budgeting must be scheduled the same as any other activity. Pre-planning should be done during the last of the preceding year in order to provide the framework for budget planning. In this pre-planning period an analysis of previous operational experiences should be made. These questions should be considered: What happened last year? What courses did we offer? What was the tuition? What was the cost of supplies for those courses? What was the instructional cost for those courses? What were the operating details which need to be taken into consideration in this pre-planning period? What was the status of the funds? Most important, what was the vocational objective? Successful educators agree that the day-to-day or even year-to-year basis is not sufficient for planning; it involves a projection of the total program.

West Virginia has to submit its vocational education projected program activities by May 15 to the U. S. Office of Education. The usual procedure in working on a five-year program is to prepare the first-year plan in considerable detail and resort to projections for the remaining four years. The pre-planning phase of the budget function culminates in a broad operating plan for the year. Budget preparation is the next step. If you have set forth the programs that will be provided, given the details of the community and public relations to the program, given the information regarding the in-service teacher activities that you plan to conduct, a budget outline has been prepared.

The step from budget preparation to control and operation is a reflection on the supervisors' abilities. Funds are requested for courses, and realism becomes a factor in the control of the operation. If you will observe and make a cost analysis, the cost can be projected. In order to know how much you have in each one of your programs from the standpoint of balance, operational control is essential.

Vocational educators are responsible for budgeting, planning, operational control, and financial functions. You need to decide how much money will be used for promotion of program. This includes advertising, newspaper space, purchase of paper, annual reports, and publications to create good community relations. Office costs include office personnel, full-time, part-time, clerks, and stenographers providing a service within the office, as well as mail costs, telephone calls, etc. A system of requisitioning supplies in which you can get a list of supplies needed by each teacher and get it in adequate form so that you can make a cost estimate is an important factor. Budget provisions should be made for the development of courses of study, salary, supervision, instructional materials, library, workmen's compensation, fringe benefits, and equipment. With a planned program of equipment replacement, it is possible to set money aside to purchase surplus equipment.

What are the actual needs for operation? What is the actual operating cost of keeping the building going? If custodians were to go to custodial training classes, the result would be a more economic use of supplies. They should be given sufficient building equipment in order to do a good job. It is necessary to know the costs for the utilities and the budget for storage. A central inventory would acquaint workers with the preparation of budget and control operations. Lack of organization and the fact that many things are invisible often prevent an accurate count. Paper work becomes the backbone of your job. What are your sources of revenue? No program of vocational education can operate in the red.

Of the three major roles in budgeting, the most effective area is planning; the most overworked area is control. A program, like man, is built on the properties of money.

Financing the Local Programs of Vocational-Technical Education

Fred W. Eberle

Each person concerned with the program should become conversive on how monies are allocated to counties within our state aid formula. In some counties the vocational teachers are included in the allocation of state funds and in other counties, they are not. In the provisions for additional state allocation you have teachers' salaries, but these are outside the formula. Recent legislation has mainly been outside the formula and this has limited the amount of available money for the care and maintenance of buildings and supportive services. The operation of preparatory programs is possible through state aid as one source; and by virtue of taxes, certain funds are placed in a formula determined pretty much by the county board of education. These funds provide for allocation of monies for teachers, non-teaching personnel, and supervisory and administrative personnel.

When a county provides a vocational program, it finds additional money for operation in the form of reimbursement, including state vocational funds and federal funds. The county has obligated and expended funds in the operation of the programs and must submit a request called an affidavit to the state for the payment of vocational aid. Certain rules and regulations prevent an advance of funds. As we look at each program, we have to

look at the funding that comes about in a particular service. Reimbursement comes from three major federal sources--Smith-Hughes, George-Barden, or the Vocational Education Act of 1963. Dollar for dollar matching is fundamental in all these acts. If the amount of available money remains consistent from year to year and the demands for funds increase, the percentage being paid to local educational agencies is going to decline. This has happened in West Virginia. When programs were first established we had the money necessary for 50-50 matching purposes; but over the years the demands have declined below 50 percent matching. As salaries of teachers were increased and the amount of money available to the vocational division for state vocational aid remained constant, the percentage dropped. Some superintendents feel that they should be receiving the 50 percent reimbursement that they were promised when they opened their programs. Funds will vary from year to year according to demands; new programs shift and old ones are discontinued, so you keep about the same number. This funding is based on salary; and as the state raises the teachers' salaries, many administrators feel that we should maintain the same percent, which is impossible.

State and Federal money is available for the operation of a summer program. If you want stability in your program, you are going to work toward a 11½-month program. Your state aid only covers a program for nine and one-half months. One county's finance cannot be compared with that of another county. Money from Smith-Hughes Act can be matched statewide as before, and excess in teacher training can be used to match instructors' salaries. Excess in instructor's salaries can carry state administration. The overmatching is advantageous. The percentage changes, and there is no guarantee that you will get the same amount each year as it is determined by the demand system.

State-federal funds and fees are two sources for the operation of adult programs. Fees cannot be used for matching purposes. For all operating programs, vocational education has classified itself as adult or extension class and the reimbursement will be $4.00 an hour. There is a limited amount of money available for this expenditure. Each service is given its budget early in the fall and they operate within it. This makes the Memorandum of Understanding very important. What does it actually cost to operate an adult class? Information has come to us that your fees are too high, and this is another reason why you need to understand the techniques of budgeting. What is the student cost per hour? You should know what percentage goes into the operation of the office, what percentage for instruction, and what percentage goes to cover building costs. Unless you operate ten or more courses, in many instances you are going to face some financing problems. In order to balance programs, anticipate ten or more courses including heavy courses and put in a few of the basics. It is necessary to learn the gimmicks because you are going to have the cafeteria approach that will get the volume courses coming. This will provide some of the revenue to cover the cost of welding courses. The expensive costs of such courses come from the cost of utilities and supplies. Financing any program is very important. When studying finance, be careful with figures. Research uncovered that for the federal dollar the state of West Virginia was spending 27 cents while the county was spending $1.67. It is pertinent for us to become very conversive with the financing of vocational education in the counties.

Techniques Helpful in Efficient Scheduling of the Administrators' and Supervisors' Time

Dr. Albert E. Jochen

Scheduling time is a topic sometimes avoided because people have a tendency to avoid the trouble areas. Most people are kind, considerate, and cooperative, and planning should be done with intellect, not emotions. When looking ahead, learn to anticipate difficulties. Know your duties and utilize your time wisely. Classify these things in order of importance and occurrence: What do you have to do daily, weekly, monthly, intermittently, annually? Schedule your duties in the school and in the community. Do not leave your obligations out of your analysis. What professional obligations have you to each other and how much time should be devoted to them? Family obligations require some scheduled time, also. Your own entertainment, recreation, or relaxation time should be scheduled into your job analysis. You must use intelligence in planning and evaluating your own personal time. Poor scheduling causes a waste of time. Inability to get quick understanding of written material is basic to letter writing. Poor utilization of available services is a way of wasting time. Use the services of a wide variety of people. Learn to use your secretarial services by educating and training them properly. In the accounting area you should have facts and figures available. Utilize the services of your mechanics facilities. "Methods of Teaching Related Shop" was developed for the trade and industrial education people and it appeared in an industrial magazine, Industrial Supervision. U. S. News and World Report, Time, Newsweek, Businessweek, and trade journals keep readers informed. Research and new products are discussed, and good ideas are presented.

It is advisable to utilize the services of your state staff. A professional library is invaluable. A curriculum laboratory is important. A pattern for the annual report can save much time and simplify its preparation. Knowing how to start is the important step. Anticipate, prepare, and estimate your needs. Budgeting time in terms of the total job will be of value. Put items in order of priority when making your job analysis.

One real function as a supervisor is the improvement of instruction. Sometimes paper work may be over-emphasized impairing the improvement of instruction. It is easy for administrators, department heads, and supervisors to get too involved in a multiplicity of paper work; however, you cannot improve the program if you are at your desk all the time and do not know what is actually happening. It would be a good idea to follow a particular class through its schedule during one school day. A principal could conduct a series of lessons with his teaching staff regularly to let them see that he is vitally interested in their effective teaching. This would improve the morale of the school system in terms of pupils, teachers, and community.

Budgeting is a continuous practice starting with the collection of data so that when time comes for the annual report, the job is fairly easy. A major aid is encouraging teachers to prepare a perpetual inventory so that they can look at a card file and know what they have on hand at the end of the day. Requisitioning supplies then becomes intelligent, easy, and understandable. A great deal of time is wasted in excessive conversation. You need to be accessible, but appointments should be scheduled carefully and observed. Justify the time it will take you to make a telephone call. By careful thinking and planning, costs can be cut.

School Law

Fred W. Eberle

Educational programs do not operate in a vacuum. As a result of the Constitution, it becomes necessary to have a legal base to operate the schools. There are several ways in which the legal status is determined: laws enacted by the legislature, courts' decisions, attorney general's opinions, and interpretation of the law by the State Superintendent of Schools. The Attorney General is the lawyer of the State and is constituted and authorized the same as the prosecuting attorney of a county is the lawyer for the board of education. A good understanding of this is essential as we work within a framework of law. For instance, there is a law in the book that authorizes the establishment of a state board for practical nurses and sets rules and regulations relative to the schools of practical nurse education. No unauthorized person is permitted to attend a practical nurse's course. Rules and regulations for schools of barbering and beauty culture are under the direction of the State Committee for Barbers and Beauticians which is an agency within the State Health Department. Understanding the laws becomes a major responsibility of the vocational supervisor.

Once we advertised a course in "custodial engineering." The licensing board for professional engineers reminded us that we were not entitled to use the word "engineering." The name of our course was changed to "custodial training" program. Schools are regulated by law and certification is regulated by law; but within the legal framework there are a number of things possible. The State Plan and the rules and regulations in the Vocational Education Act of 1963 must be used to identify the work we do and the legality of it. We are justified in operating several types of programs by virtue of state law. One of the first things required in the State Plan is the legal justification of the operation of vocational education and the assignment of authority.

In Article II-B, Area Vocational Education programs, the law is stated:

> The State Board of Education is designated as the State Board of Vocational Education. It is established and empowered to establish and maintain area vocational education programs including the acquisition by purchase, lease, gifts or otherwise of necessary land and the construction and expansion, remodeling, alteration and equipping of necessary buildings for the purpose of operating educational training centers . . .

State law requires the state superintendent to have a conference of county superintendents. It establishes qualifications, compensation, methods of removal, requirements for the county superintendent's office, and regulations for disposal of school property. Board meetings are regulated by state law. Basically, we do not approve the plans of vocational schools from the legal standpoint, but rather from the standpoint of the investment of state and federal funds. There is a stipulation in the law that says the state board may require all plans and specifications for the erection of schools to comply with the requirement of law. It may require all counties to submit all plans and specifications for their approval and your State Plan says that for counties to be eligible for school construction,

they have to comply and have the approval of the State Department of Education, Health Department, and the Fire Marshall's office. Failure to have any one of those three approvals may cause your money to be withheld. The Health Department can close your schools quicker than anyone else. The Constitution says that funds raised in the county have to be spent therein, and that word therein has been a stumbling block for a number of years as it prevents counties from undertaking a joint program. State law covers minimum school term, transfer of students, standard school classification, and kindergarten. Night schools and other extension activities are mentioned. The Board of Education shall have the authority to use school funds to financially support schools for such purposes, and these classes shall be conducted in accordance with rules and regulations of the State Board of Education. The board of education of any district or indepentdent district shall provide for the convenient use of school property to promote and facilitate frequent meetings and associations of the people for discussion of recreation and other community activities. They secure and house material for use and study of foreign, home, and community problems and provide facilities for the dissemination of information on the farm, in the home, and in the community.

> Under Article II, "The board of education of any county shall have authority to provide special classes in education and the charged tuition of such classes for those who are 21 years of age or over is not to exceed the actual cost of operation of such classes. The Board shall also have authority to enter into the contract with schools and authorized agencies and the Federal Government for the education of adults to provide, assemble, and house materials and equipment for efficient instruction in any and all such classes, employ teachers and provide facilities by way of a building and equipment under the control of said board. Any funds from such tuition shall be credited to the current expense funds of the county board of education."

This requires the keeping of solid records. The State Superintendent of Schools has the authority to establish a State Department of Education, a Division of Adult Education, and provides for suitable coordination and supervision of such educational programs as are established under Section 19-A and 19-B of this article. It is a part of the State Department of Education's responsibility to set up a system of classification because it gives the State Department the authority as a part of the school system, the state, and all secondary school departments. State supported institutions shall be approved, classified and rated by the State Superintendent according to the rules and regulations and subscribed by the State Board. An opinion written by an Assistant Attorney General put the establishment of standards for all schools, public and private, under the wings of the State Superintendent of Schools. This will entail from six to nine months because classification and evaluation will have to be in terms of standards for that school.

There are many questions that are still unanswered. If students participate in an area vocational program, how shall they be counted as it relates to calculation of state aid? Can you accept students from

parochial schools in your program on a shared time basis? As soon as the answers are available, they will be made available to you. On salaries for teachers, "The State Board shall establish the minimum salary schedule for teachers. Specialized training may be required of vocational, technical, and adult education teachers and such other permits may be authorized by said board." We have to work within the framework of the law. In some areas, a course in school law, which is a two or three-semester hour course is offered.

Relationships of State and County Projected Program Activities

Fred W. Eberle

With the enactment of the Vocational Education Act of 1963, the U. S. Office of Education took a look at some of its responsibilities and functions and realized that some things were needed. Before any state can obtain funds, projected program activities must be submitted. This plan includes manpower needs of the state and how the state expects to relate the program to meet such needs. Preparation and submission of this document has been our responsibility. Statistical information was used to outline the manpower needs of the state and the attempt was made to relate the program to such needs. The projected program activities should contain as thorough a description of the county as possible. Location often has significance, and major industries are important. This information should indicate to you, your superintendent, and board of education some of the statistical data that will indicate trends because it is on the basis of analysis of such trends that you are going to have the problem of identifying need.

With the passage of House Bill 7 establishing the Area Vocational Program, it became necessary for us to identify potential areas in which area vocational schools could be established. Many times we do not prepare ourselves sufficiently so that we can project the program.

Sometimes we have a passive attitude toward progress, so when we started the planning process in the development of the projected program activities, we needed to study the history of the state, its pecularities, its location, and socio-economic problems. Knowing the labor force is a major responsibility. How many machinists, auto mechanics, bricklayers, electricians, plumbers are employed? What is the major composition of the work force? How is your population distributed? Is it heavy on the above 50 or below 35? What is happening to people? The pecularities in manpower will be as important to you as to us. Take the mining industry--how many men are actually engaged in mining in your county and where are they? Where is your school in relation to that location? Location of the vocational youth is one of the biggest jobs facing some counties. What about accessibility to population and vocational education facilities and programs? How about levels of education? Do you know the enrollment in your particular school system as to grade level? What is your enrollment in vocational education as compared to enrollment in general education? What are facts and figures in regard to the finances of education, cost per pupil, above or below state average, its range with regard to national level? How many one-room schools do you have? What are the facts about your people?

There are 319,000 people who are 18 years of age or over who have had less than an eighth grade education, according to the 1960 census. Counties like Kanawha, Harrison, Marion, and other large industrialized counties have educational level of 10.2. This is significant because in many instances the people both employed and unemployed will have less than a high school education. The parents of the children who are now in school will have less education than their children; and if we take these facts to be meaningful, another type of education program in addition to the vocational program to raise the educational level of the work force is needed.

With all the talk about manpower shortage, one basic factor is found and it reveals that those with the least education can be found on welfare rolls. Education, especially vocational education, is the backbone of economic development. We are concerned with man's occupational competency but often overlook the fact that his occupational competency is dependent upon his educated ability. Reading and writing are necessary in order to understand the concepts and principles that are involved. Those with limited ability must be identified and programs provided for them. Labor force, education, and per capita income of the people are part of the index to occupational performance. Mobility has an economic factor involved in it that is not often recognized. Many of the problems that occur in Chicago, Cleveland, Akron, and Detroit, from the standpoint of the West Virginia migrant, stems from the fact that he is not accustomed to the socio-economic level encountered as he moved into that area.

There is a rule of thumb in vocational education that you need approximately 250 - 350 people engaged in a given occupational area within a given location in order to identify a shop or laboratory for that particular occupation. Sometimes after making this projected study, you will find a number of occupational areas that may be united or put into a cluster. Once you have the occupational areas for the jobs, the next thing is the analysis and you may have two or three that you can put together in the common core of manipulative skills. You are not going to be measured on the basis of the quality of your facilities, but on the value and performance of your product. You will have to be more realistic in the determining of the occupational areas in which you are going to provide training. Manpower needs should determine the program activities. Be on the alert to recognize potential placement. For instance, in the town of Poca, there is no one available to repair TV's, radios, and simple household appliances. After two hours of work in the location, there was indication of eleven job areas for which training might be provided.

To extend or improve a program, the consumer must know its purpose and its content. Limitations are many times underscored by the lack of planning. Before answering a company request for training, I familiarize myself with a breakdown of their work force to project with the personnel director to know why they feel they should work with a vocational unit in order to satisfy some of their personnel needs. In order to explain and sell a program, one must be informed. Whenever a vacuum exists around any type of training program and a vocational educator does not eliminate that vacuum, another agency will take over the job for us. You must be sensitive to the manpower needs of your area. This sensitivity includes information, data, and facts. What is the entry job? A vocational

education program can be effectively built on that one element alone. In some counties people say they do not need vocational agriculture, but look at the number of stores that handle chemicals and fertilizers that relate to the agricultural world.

Honeywell and two other companies have available training programs for heating, ventilating, and electricity. Home economics needs to be expanded. A training program is needed to improve service and preparation of food in the restaurants. In many cases the service is poor and the food is unattractive. If you would find the individual that has the occupational competency and the ability to transmit the idea, a training class should be encouraged in three major areas: service station attendant, waitress, and retail sales person.

The purpose of supervision is the development of the teacher. What is needed in Distributive Education? How about a course in window display? What are the offerings in health occupations? Do you know what is involved in medicare from the standpoint of institutional care? Where are they going to get the people? If experience is any indication, you can stay in this field for the rest of your life and still not satisfy the needs and demands because even Civil Service has cut down on the standards. We must know our own program, not one little facet, but the total potentiality of all the services. Study the nature of the industry and determine the limitations they have in the field of education in order to help them. Enrollment should be 75,000 who are not included in the day school. We should have five adults for each day student.

Methods and Techniques for Broadening the Horizons With Respect to Vocational-Technical Education

Dr. Albert E. Jochen

Most people are more familiar with business and industry than with labor. Society is organized in favor of the large business managers as they own newspapers, radios, TV, and sometimes even the church. We should be familiar and knowledgeable in the area of labor. The book, The Worker in Modern Society, gives the history and development of organized labor. Big business has learned that their profits and the country's prosperity is directly related to the individual's paycheck. There should be an understanding between labor and management. A committee should take a look at a course being offered and determine whether or not it is up to date in the light of their experiences.

A film was made in several languages to send abroad to teach the Europeans how organized labor is democratically operated between management and labor. This film could educate guidance counselors as to what an apprentice is and how the program should be conducted. The film could be obtained from the Department of Labor and if shown to the general public, there would be better understanding about this phase of your work. In order to get along with some labor unions, organize an apprentice program and inform them of things you can do. If labor is highly organized, they set up the apprentice program and no one is going to participate who does not carry a card.

There are several other things that can be done in relation to labor and management:

Retraining classes, remarkably responsive, help in a wide variety of ways, not only upgrading the employee but improves placement.
Upgrade journeymen.
Instruct pipefitters and plumbers to install plastic or glass pipe.
Clinic for service people.

You approach the right people and cooperatively develop a lecture-demonstration program plus a trouble-shooting kind of situation. This encourages people to come into your school, it is simple to operate, you receive assistance, and you are providing services to your local community. The same thing is true in setting up a program here. A unit course for boys working in service stations would not take long and one of the garages could be used. The boys should be taught how to keep a garage clean and make it look attractive. The service station owner could increase his business by getting some education and training. The automobile dealers might come in for a session and start some training of their own. Show the course outline and use good facilities that belong to one station owner and have some of the others pay for whatever is used during the training session. Get some publicity, and involve the community by having them evaluate the program by the improvement made.

Vocational educators should watch legislation for appropriations. Money is being put into pollution control, air and water. Decide if a foreman's training program is feasible. Generally, a county or a couple of counties can get together, maybe once a year, and involve all teachers. The meeting could be devoted to discussion of aims and objectives and problems faced.

As an administrator, it is necessary to be able to speak easily before a group in order to project your program. If you do not have these qualities, hire an assistant who will be able to do a good job in this area.

Advisory Committees, Their Use and Abuse

Fred W. Eberle

It is our challenge and responsibility to provide a program of vocational education that will serve the needs of all the people, and it is the voice of others that helps to make the program. An advisory committee provides a lifeblood for the program. Members should be selected who have knowledge of business and industry, who are sympathetic to the purpose of education in your area, and who will give strength to the program. In involving these people into the program, there has to be some need because busy people do not like to be assembled without purpose. An advisory committee can be a powerful agent if nurtured and properly adjusted to the problems at hand. General educators have recognized the value that has accrued to vocational education through the use of advisory committees, and over the years in West Virginia the basic idea has been adopted by the majority of the county superintendents.

The principle of communication is fundamental. If advisory committees had been effectively utilized in Kanawha County by the vocational people, in all probability there would be a technical high school in Charleston today.

One of the biggest tasks is the identification of the potential member of an advisory committee. You do not want total agreement; you want constructive and creative criticism. An advisory committee should represent the cross-section of the community or the county. You want representation of business and employee as well as government and the public. Each type of committee has its purpose and place.

Projected program activities can be taken to an advisory committee because this would reflect your thinking and your staff's thinking concerning where you want to go and what you have selected as being needed to get there. These people have a great deal of wisdom; they have solved problems of business and industry and they may know some of the soft spots in the road that you have not realized. It helps to be on first name basis with the cross-section of the community and county.

The training and care of an advisory committee member requires the finesse and technique that a jeweler gives to a diamond because this person is a jewel and you never want to tarnish the surface of such a jewel. If vocational education is going to move forward in West Virginia, it is going to move forward because each and every man attending this seminar sincerely accepts the promise that his program needs and deserves a dynamic advisory committee.

Summary

Dr. Albert E. Jochen

We have laid a foundation upon which to build--a sound philosophy. Vocational education in basic principle has not changed. The teamwork is essential. The team has to be composed of other educators, the total educational force, the total community, the total industry and business field. Surveys must be taken to determine the needs and the proper plan developed. Utilize points discussed: Make analysis of your job--where you stand and how you fit on the organization chart. After this has been determined, you will be able to make surveys and keep up to date as to what is needed in the community and make worthwhile contributions in the improvement of the total educational program. Perspectives and horizons have been broadened. We discussed what needs to be done in training teachers, in budgets, and finance, in keeping your school current with its physical facilities, equipment, and supplies, and in securing the type of counseling necessary in the occupational areas.

The future is ours if we conscientiously and eagerly face the problems before us and bend our every effort for the total good of all mankind. Technology helps increase our Gross National Product and puts us out in front in the number of telephones, TV's, bathtubs, and cars; but it makes it difficult for the ordinary student to get a feeling of personal

fulfillment. It brings out the importance of the individual and freedom while at the same time accelerates the forces which destroy freedom and the individual. It eliminates the unskilled and semi-skilled. It increases production and at the same time it decreases the work force. These things are vitally important to us when we think of curriculum development.

You must act as an arm of the State Department and work closely with them using their leadership in developing the kind of programs needed in your community.

Evaluation
Dr. Joseph K. Bailey

Evaluation must be done in terms of objectives. The objectives were established at the beginning of the conference, and an evaluation sheet from each member is required to determine the effectiveness of facilitating the planning of the projected program activities of vocational education for each county.

What Comes Next?
Fred W. Eberle

The growth of vocational education in West Virginia has been spasmodic; it has not been steady and deliberate. We are undergoing a growth period now because of the incentives provided by federal funds.

It is from ideas that blueprints emerge. About 1960 the state staff began to assert leadership, because it was an outgrowth of the staff's effort that House Bill #7 became a reality. We got on the statutes a law that provides for the establishment of Area Vocational Programs.

The next step is the sharing of the idea that it is not who is going to run the program but who is going to profit from it. Consequently, one of the things that comes next will be the basic design in the state that two or more counties will unite and form an area vocational school.

An effective communications program must be developed. Drive-in conferences uncovered the condition that facts were not being disseminated. This was one step toward a communications program and the next step would be a short intensive seminar dealing with the techniques of communications in which you would explore the potentials of good news. Criticisms have been made that we are not capitalizing on the news. News should come from the grass roots at the county level. Communications will be the only means that we have of taking our employment potential of 40,000 to the potential of 60,000.

Many people have had a traditional concept of vocational education, looking for rigidity rather than flexibility. Why is it that there is no place in the state of West Virginia offering a semester course under the label of vocational education? Why is it that we have very few programs

that are one-year in length? Why can't an adult enroll in a vocational school? The public has one idea as to what should be done and you have another.

Curriculum development is going to have to become one of the prime activities of the state and county staffs in designing programs that will reach all of the people in all of the communities. It is going to have to be realistic in sound and solid course construction. We must learn to use devices and media. To summarize our planning for the future, these are five major areas:

1. Organization
2. Communication
3. Curriculum
4. Evaluation
5. Professional growth

Evaluation will be one area of effort where the state will join with the county in attempting to bring about the necessary techniques, devices, and instruments in order to improve the program.

Professional growth is of great importance in your area. Strong programs of vocational education are operating in counties where many people in administrative positions started in their profession as vocational teachers. Some county supervisors have advanced from teaching positions.

The investment in your professional growth is time, money, and energy, and this investment will be the largest contributor to vocational education. We must be seekers of ideas, developers of plans, and builders of programs. Where will we be in vocational education ten years from today? We must be aware of the changing role of leadership; because time has its effect, ambition has its role, but above everything else, leadership is an adventure and I trust that as a result of these three weeks you have become an adventurer.

Conference Evaluation

EVALUATION

County Vocational Supervisors Seminar

Directions:

Read each statement carefully and decide how you feel about it. You will agree with some statements and disagree with others. You are offered five possible answers to each statement. The "Undecided" answer should be circled only when you have no opinion. Circle one number following each statement. Please answer all statements.

Example:	Strongly Agree	Agree	Un-decided	Dis-agree	Strongly Disagree
The city needs to improve garbage collection schedules	5	4	3	2	1

This person feels in no uncertain terms that garbage collection schedules are inadequate.

In regard to this conference I feel that:	Strongly Agree	Agree	Un-decided	Dis-agree	Strongly Disagree
1. The purposes of this program were clear to me.	12	11			
2. The objectives of this program were not realistic	1	2		6	14
3. Specific purposes made it easy to work efficiently.	7	16			
4. The participants accepted the purposes of this program.	4	18			
5. The objectives of this program were not the same as my objectives. . .		1		14	8
6. I did not learn anything new . . .				4	19
7. The material presented was valuable to me.	18	5			
8. I could have learned as much by reading a book				8	15
9. Possible solutions to my problems were considered.	6	17			
10. The sessions were good but did not apply to my situation.				10	12
11. The information presented was too elementary				14	9

	Strongly Agree	Agree	Un-decided	Dis-agree	Strongly Disagree
12. The speakers really knew their subjects	18	5			
13. The discussion leaders were not well prepared.		1		10	11
14. I was stimulated to think objectively about the topics presented.	9	14			
15. New acquaintances were made which will help me in the future . . .	12	10	1		
16. We worked together as a group. .	15	9			
17. We did not relate theory to practice		1		14	6

Terminology Associated With Vocational Education

Apprenticeship Training: A program of related and supplemental instruction in a craft, trade, industrial or technical occupation in which learners or apprentices are regularly and lawfully employed for the accepted term of the apprenticeship.

Area Vocational-Technical Center: A regional comprehensive area vocational-technical school serving school districts and students from adjoining areas. Such a center is considered as an integral part of each participating school district's total education program.

Business and Office Education: A program of instruction designed to educate for employment in business and office occupations including secretarial jobs, bookkeeping, office machines, and related areas.

Comprehensive High School: A senior high school offering a program of studies in academic, business, distributive, agricultural, and home economics education. Except in a few such schools, trade, industrial, and technical education curriculums are generally not provided.

Continuing Education: A program of instruction for employed adults which may include pre-employment, supplementary, and occupational extension classes.

Cooperative Work-Study Program: A program of alternating study in school with work on the job, the two phases being so planned that each contributes definitely to the student's education.

Distributive Education: A program of instruction designed to educate for careers in selling, marketing, merchandising, and business management.

Federal Vocational Education Act of 1963: Provides funds for a total program of occupation education for high school youth, adults, school dropouts, high school graduates who desire full-time instruction, and disadvantaged youth and adults on either a full-time or part-time basis.

Industrial Work-Study Program: A program distinguished from the Cooperative work-study program in that the work performed is a means of obtaining financial assistance in order to remain in school full time. This work program is not designed per se to contribute to the student's education.

Junior College: An incorporated institution with an admissions requirement of four years of secondary schoolwork or its equivalent, offering one, two, or three years of work in terminal courses of collegiate grade and quality; or an incorporated institution offering both standard and terminal courses. A junior college may issue a diploma indicating satisfactory completion of a one-year program or confer an associate degree or a diploma in recognition of satisfactory completion of a two- or three-year program. Note: The term "junior college" covers community colleges and institutes, including technical institutes as well as those institutions specifically designated as junior colleges.

Manpower Development and Training Act of 1962: A Federal Act which provides for the establishment of training and retraining programs for unemployed persons who cannot obtain employment with their present skills or who are working below occupational potential.

Occupational or Trade Extension: Instruction designed to supplement or extend the trade knowledge or skill, or both, of employed workers in industry.

Technical Education: Preparation for employment in an occupation which requires mastery of a large amount of technical information including science, technology, mathematics, and drafting as applied to modern design, production, and service.

Technical Institute: An institution offering a two-year terminal program leading to the degree of associate in applied science which emphasizes preparation for employment as a technician in a specialized field such as may complement the professional engineer.

Vocational Industrial Education: Instruction which develops basic manipulative skills (hand and machine), safety, judgment, technical knowledge and related mathematics, science, drawing, art or design specifically related to a trade or industrial occupation for the purpose of preparing secondary youth for initial employment as apprentices or advanced learners in industrial occupations and for training, retraining or upgrading adults.

Vocational Agricultural Education: A program of instruction in agriculture to train for occupations in farming and related fields including agricultural mechanics, agricultural business, ornamental horticulture, conservation, and forestry and other occupations involving knowledge and skills in agricultural subjects.

Vocational Home Economics Education: Programs of instruction designed to provide training for (a) improvement of family life through more effective development and utilization of human resources, and (b) gainful employment in an occupation involving knowledge and skills of home economics subjects.

SOCIAL ATTITUDES; *PSYCHOLOGICAL CHARACTERISTICS; INDIVIDUAL CHARACTERISTICS; *DROPOUTS; *GRADUATES; *ADULT VOCATIONAL EDUCATION; RESEARCH NEEDS; *FEDERAL PROGRAMS; PROGRAM ATTITUDES
MDTA PROGRAMS; *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS

Six trained behavioral scientists conducted in-depth interviews with 36 Manpower Development and Training Act (MDTA) students in Lexington, Kentucky, Washington, D.C., and New York City, to identify hypotheses suitable for use in later MDTA studies. Ten of the students interviewed had completed an MDTA training course and 26 had dropped out prior to course completion. The interviews were informal, exploratory, and semi-structured. Areas covered in the interviews were (1) the extent to which middle class values had been adopted, (2) the family structure, (3) the trainees' attitudes toward peers and the world in general, (4) the degree of approval or disapproval toward the MDTA courses, and (5) the guilt connected to dropping out. Conclusions which can be considered for further investigation using a representative sample and more precise instruments are that (1) Middle class values have been learned but the means to achieve them have not, (2) Lingering resentment from early discrimination and humiliations is still in existence, (3) Experienced teachers are needed in this setting, and (4) Counseling and psychotherapy should be provided to maximize vocational training. ATTITUDES AND MOTIVES OF MDTA TRAINEES: A PILOT INVESTIGATION

LIBRARY
THE CENTER FOR VOCATIONAL AND
TECHNICAL EDUCATION
THE OHIO STATE UNIVERSITY

SUMMARY

From depth interviews with 36 men and women Manpower Development and Training Act trainees and dropouts the following hypotheses were derived for further investigation: So-called middle class values, that is, the need to work hard, save money, control impulses, and so on, may have been learned, but neither the means to realize them, nor the preparation for withstanding frustrations have been realistically acquired. The peculiar dominance of the mother in many disadvantaged Negro families, and the concomitant absence of the father as provider and role-model may be reasons for this lack of preparation. Considerable lingering resentment from humiliations felt early in life is present. This may lead to various behavior problems in the MDTA classes.

Besides the suggested hypotheses, two recommendations from the study are worth serious consideration: (1) The MDTA trainees need the most highly experienced teachers, and (2) the trainees need counselors and psychotherapists to deal with their emotional problems in order to make their vocational training socially effective.

INTRODUCTION

While a great deal is known about the demographic characteristics of MDTA trainees—age, sex, education, and annual income—little is known about their psychology. Almost nothing is known about how they think and feel, what they worry about, expect, or enjoy. It is not known, for example, whether they liked their last jobs, were indifferent to them, or hated them. Very little is known of the psychological factors that determine why some trainees are eager for retraining, while others drop out.

Many of the problems involved in vocational retraining, occupational mobility, and recalcitrant unemployment have been more difficult to solve because so little has been known about the trainees' attitudinal and motivational components.

T600884

U.S. DEPARTMENT OF LABOR: W. WILLARD WIRTZ, Secretary
MANPOWER ADMINISTRATION
Office of Manpower, Automation and Training

Without this kind of information a reasonably successful program of training, for example, is virtually impossible. This kind of information, when, and if, it becomes available, would also provide a sounder basis than was formerly present for improving the teaching, reducing the dropout rate and making the trainees better able in the future to find and hold jobs.

In order to obtain hypotheses for further testing with more precise instruments and a better sample, the psychological research group of the Office of Manpower, Automation and Training (OMAT) undertook a pilot investigation into the attitudes and motives of MDTA trainees and dropouts.

THE SAMPLE

The study to be reported here was a pilot project, stemming from the need to obtain some information on trainee attitudes and motives as soon as possible. The project made no attempt to select a "representative" sample in the technical sense, because of the preliminary nature of the investigation. In general, a preponderance of male dropouts with less than a twelfth grade education was interviewed, because the least is known about these trainees. The interviewing was done in Lexington, Ky., Washington, D.C., and New York City. The choice of cities and the number of interviews were dependent primarily upon the availability of trained and competent personnel free to assist in this project.

The cases for interview were selected from the local MDTA training files so that each sampling city had a total of about 20 cases. The only restriction on the final selection was that a 3:1 ratio hold between dropouts and completers. In general, the proportion of males to females in the sample represented that among dropouts. There were about two males to every female in the study. After considerable difficulty in locating people, a total of 50 interviews were finally collected. Of the 36 which were used in the final analysis, 27 were nonwhite.

THE INTERVIEW

The interviewing was done by six trained behavioral scientists, each of whom was experienced in "depth" interviewing. The interviews were exploratory and semi-structured, by which is meant that the interviews were informal, and the respondent determined the pace of the interview. Although no questionnaires or tests were administered, the interviewers investigated certain predetermined areas. These areas in the life history of the respondent upon which the interview focused whenever the occasion presented itself included early experiences with parents, brothers and sisters; successes and failures in school; attitudes toward men and women of their own age; job histories and experiences at work; and information about how the respondent learned about the training programs, how he felt he was treated in it, his opinions about his teachers and the equipment, and his reasons for completing or dropping out of the course. The interviewers also tried to obtain information about such general psychological dimensions as reactions to failure, current aspirations, ambitions, worries and fears.

The depth interviewing techniques attempted to see the trainee's world through his own eyes, see it in terms of what it "meant" to him. The subjective elements have intentionally not been removed. From the analysis of the interviews, hypotheses can be constructed for further investigation.

The interviews were all arranged in advance, by telephone whenever possible, and by personal contact when the respondents could not be reached by telephone. An attempt was made to have women interviewers talk with women respondents, and men interviewers talk with men respondents; Negro interviewers interview Negroes, and white interviewers interview whites. Sometimes husbands and wives were interviewed together, and on one occasion, several trainees were interviewed in a group. The interviews took place in almost any setting in which the respondents felt comfortable, and to this end the respondents' suggestions were followed as nearly as possible. Interviews were held in bars, restaurants, or in the respondents' homes. Some interviews were held in the senior investigator's office, and tape recorded with the respondent's permission.

The session usually began with the interviewer introducing himself, and adding that he was working for the Depart-

ment of Labor on "some research to find out more about what goes on in a person's life while he is an MDTA trainee." The research purposes of the study were stressed, and the absolutely confidential nature of the interview was assured. The interviewers explained that the Government could not improve its training without the trainees' cooperation.

The keystone to establishing rapport in interviewing is equality and honesty. There was no condescension from the interviewers. They answered the respondents' questions as directly and as candidly as they hoped the respondents would answer theirs. This does not mean that all the interviews went well. Some of the interviews were eliminated because of obvious fabrications, and in the final analyses, only those interviews were retained which, in the judgment of the interviewers, provided sound information. A preliminary draft of the analyzed interviews was circulated to the interviewers to be certain the findings coincided with the interviewer's impressions during the interviews.

The principal categories used in the analysis were the learning of middle-class motives, the role of the woman in Negro families, the problems of mental health, and favorable and unfavorable attitudes toward training.

FINDINGS

1. The first question is whether MDTA trainees have *learned middle class values,* especially the need for education and training? The answer seems to be "Yes." Many of the respondents, both men and women, young and old, were clearly aware of the function of education and training in the mobility process, both occupational and social mobility. Although their language was unsophisticated, they knew whereof they spoke. As one respondent put it,

> "I worked with a pick and shovel until I 'took this course, . . ."

The respondents expressed clearly the desire "to better themselves," or to do "better than their parents." A 36-year-old man, a semiskilled electrician, wanted to learn TV repairing; another wanted to become a salesman "in a better men's shop;" others mentioned becoming nurses, nurse aides, cosmetologists, auto repairmen, custodians, and so on.

What is lacking, apparently, is not the desire to better one's self, but the awareness of what is involved in doing so. One woman wanted her husband to complete the TV repair course, but did not want to reduce her household expenditures while he was in the course. Another woman "always wanted to be a cosmetologist," but when she found that it took months to learn to process hair, and longer to learn to style it, she decided that she "didn't want to go that long." An intelligent, attractive 21-year-old woman knows what she wants, but doesn't know how to get it. She "doesn't want to stand behind a counter all her life"; but neither does she "want to give 2 years of her life to going to school."

Related to this is the ease with which trainees were discouraged and dropped out of the MDTA training courses. One respondent began to fall behind in her shorthand course. Then she became ill for 2 or 3 days. When she finally called the MDTA office to express her concern about her standing in the class, she was given no counseling or encouragement. It was at this point, feeling that she could never catch up, that she decided to drop the class.

The tentative hypothesis seems to be that the aims of the trainees are modest and clear, but the commitment to them is either superficial and tenuous, or complicated by competing motives. Moreover, in many cases there is no real awareness of what is required to attain the ends expressed, nor any preparation for the sacrifices and frustrations which may be encountered.

2. Any consideration of motivation must be followed by a discussion of the family situation in which the motives were first acquired. Many of the interviews suggested that the function of women in the family was especially crucial and symbolic. Although this was not a "sample" in the scientific sense, a disproportionately larger number of women in the study were widowed, deserted, separated or divorced. But the family, as an intact social unit, survived. Perhaps because they had been prepared by their own childhood experiences for these kinds of crises, the women

showed remarkable independence and resourcefulness in supporting themselves and their children when their marriages dissolved. With the father absent, the family structure was mother-centered and woman-dominant. One of the results of this kind of family structure was that both the young women and the young men showed closer emotional ties to their mothers, or mother-substitutes, than to their fathers. The men who had been raised in these mother-centered families faced a more acute problem, for the model of a substantial wage-earning father was completely absent. The mother, therefore, was the model and the prime mover; the father being often only a shadowy figure in the man's mind. Moreover, references to the father were often uncomplimentary. One of the men put it best in these words:

"Because, well, my father was an utter failure. He was nothing but a failure."

"What did he do?"

"Well, it's like this . . . my father, . . . well, to cut it short, he was a drunkard. If it hadn't been for my mother, Lord knows where we'd all be now."

"Does your mother work now?"

"Sure, Mom is working now. She's working like a dog."

"Do you worry about her working so much?"

"Sure, I worry about her. But I worry more about failure on my part. I always wanted to top my father. I just want to do something big. Something that's going to set me big in her eyes."

The man's early relationship with his mother seemed to influence not only his relationship with his wife but also his success in the training program. For many of the men who had successfully completed the MDTA training course, or for those who had terminated for "good" reasons, the relationship with their mothers was often reported as tender and good, and their relationships with their wives was solid and stable. One of the respondents, for example, remembered his mother as a "nice and loving woman," although she died when he was 11 years old. His wife, he said, looked very much like his mother. This man, 42 years old, dropped out of the training program only when the allowance he received was no longer sufficient to support his family and his wife—who had recently become an invalid.

Trainees dropped out of the courses for both "good" and "bad" reasons. For example, in coding the interviews, instances where the trainee dropped the MDTA course to obtain employment, or because the training allowance was inadequate, or because the course content was — in fact — beneath the trainee's level were coded as "good" reasons; while being dropped for absences, disciplinary reasons, or dropping without an immediately available job were coded as "bad" reasons.

From the interviews, it appeared that those trainees who had established positive and affectionate relationships with their mothers early in life were more likely to complete the training program, or to drop out for "good" reasons. It is especially important to point out that there was no evidence that those trainees who did not complete the courses had poor family relationships. The most significant observation for further investigation is that many of the men in the MDTA training programs had never in their lives had suitable role models from whom to learn how to achieve the various middle class goals. Moreover, socialization by the mother, alone, may be important, but insufficient preparation for the job market. It may be very hard to introduce the world of work to a young man who never had in his childhood a steadily working father.

3. The third concern of the investigation is with the kinds of attitudes the trainees had toward themselves, their peers, and the world in general. The range was great. On the healthy side, there was a solid recognition among many respondents of the need for hard work and realization that no one is indispensable, and, especially among the better educated Negro trainees, a free discussion of the race problem and what it meant to them.

On the other hand, however, there were examples of maladaptive attitudes. There was, for instance, the middle-aged woman who had been held back in the third grade and who had dropped out of school at the age of 11, who resented the fact that the instructor in her remedial class made the students start by learning the alphabet and counting to one hundred.

This woman had no real awareness of her limitations. There was, of course, a range of severity. There is no need to multiply examples. The conclusion was inescapable that many of the trainees had symptoms of rather severe problems.

Between these two extremes were trainees in which distrust and anger were the prevailing moods. In a few cases, the suspicion extended even to the interviewers (and unquestionably affected what could be obtained from the interview). In one of those, the respondent, a good-looking, young man, demanded and took, the interviewer's notes. He felt that he had revealed too much of his personal life. He promised to return the notes in the mail as soon as he had "edited" them. Two months later, they had still not been returned. Despite the fact that he was alert and strong, he was, and had been repeatedly, unemployed. His family was being supported by welfare. However gently the interviewer tried to suggest to this man that his antagonistic attitudes toward the training course kept him from learning what the course had to offer, the man kept returning to the notion that if only he could get his family into one of the housing projects, all of his problems would be solved. Distrust of the interviewer is, of course, indicative of generalized distrust. A young woman, who said that she "liked to keep her problems to herself, because you can't tell who you can trust," failed to answer the young interviewer when she asked, "Do you trust me?"

It is certainly true that a great many of the respondents could look back with anger upon certain of their childhood experiences. Quick tempers, frequent fights, and a grouchy attitude toward life, when reported by the respondents, could often be related to shameful and unfair treatment early in their lives. A young man gave mostly one-word answers to questions about his life.

> "What worries you the most?"
>
> "Work."
>
> "What about your job?"
>
> "Stinks."
>
> "Ever have any good luck?"
>
> "Nope."

His longest answer was the most pathetic.

> "Do you think things will ever change for you?"
>
> "Can't change anything on this honest wage for honest work. . . . Don't think things will ever change unless I can get some money together. . . . Don't see how I can ever do it working like this. . . . Things like this can drive you nuts. . . . Some guys make in a few hours what I make in a week. . . . Selling dope, for instance. . . . Not saying I'd do it, but it makes you think about it."

In cases like these the anger may have subsided, but the resentment lingers on. It is hard to believe that the acquisition of further occupational skills, alone, will solve the problems of such people. Counseling or psycho-therapy may be necessary to alter certain basic attitudes toward the world, and toward the self, so that not only the acquisition but also the use of vocational skills may be facilitated.

4. Although regional differences were great, more approval of the MDTA courses than disapproval was expressed by those interviewed. Many of the teachers and the counselors worked hard to maintain the students' interest, and were respected for their teaching ability and their patience. On the other hand, discipline and teachers' attitudes toward students came in for the most frequent comments. A 50-year-old laborer quite correctly felt it was demeaning for a teacher to make an adult man stand facing his locker as punishment for asking that the windows be opened. And a 26-year-old mother of two children told of another class where the typing teachers were changed in the middle of the course from an older, experienced teacher, who presented the material at an appropriate pace for students with learning problems, to a younger, inexperienced teacher. The respondent could not learn the material fast enough for the second teacher, so she dropped the course, although she was then typing 35 words a minute. The interviewer checked other women in this class to corroborate the story, and it was correct.

All of these incidents point to the need for experienced teachers in the training courses, teachers who have themselves mastered the contents of the course sufficiently well so that they can give their attention to the various "learning problems" which often arise with older students.

Another kind of complaint arose. A valid complaint about money. The interviewers were particularly careful about this issue, since lack of money is a ready-made and culturally-accepted excuse for dropping any course. The interviewers asked:

> "Why did you really drop the course? It wasn't money was it . . . really?"
>
> "Yes, it was one of them."
>
> "Was it really? Think for a minute."
>
> "There were a variety of reasons, but money was one of them."

But money was considered a valid reason for dropping the training only where the case was clear. For example, one respondent, who had worked his way through high school, had no family, and was desperately poor, was now trying to take a mechanical drawing course. His training allowance was $20 a week, of which he paid $9 a week for a room in a pleasant, quiet house. When his check didn't come, he had no bus-fare. His telephone calls to the school produced no results, and he was dropped for absences. Although it was true that many of the respondents failed to use their allowances properly, many others found themselves unable to exist on what they were receiving. A more flexible money policy seems necessary.

5. Unfortunately for him, the dropout is viewed by society, and views himself, as a double failure. He represents the failure of the school to instill in him the proper enthusiasm and motivation to complete his course work. And if he is one of the underprivileged, untrained or minority groups, he confirms the groundless suspicion that the uneducated will never really try to improve their lot. Instead of being perceived by MDTA counselors, teachers, and administrators as a challenge, the dropout seems to be a source of embarrassment to them.

Because dropping out of the course is attended with considerable guilt, the potential dropouts rarely feel free to discuss with responsible authorities, or counselors, the fact that they may not continue the course. Indeed, because of the guilt associated with dropping out, the thought, itself, may be "put out of mind" until it is too late. A skillful counselor trained to interpret the defensive maneuvers the mind takes to hide the motives about which it is ashamed, might save many potential dropouts. Since MDTA is working with those people for whom life's problems have often in the past been overwhelming, it is only fitting that some way of helping them should be found. No college or university would try to keep its students in school until graduation without some provision for dealing with their emotional problems. MDTA students need the same chance.

CONCLUSION

From depth interviews with 36 men and women, 10 of whom had completed MDTA training courses, and 26 of whom had not, the following hypotheses can be considered for further investigation using a representative sample and more precise instruments. It appears that middle class values have been learned, but the means by which they can be realized have not, nor has there been any real preparation for the kinds of frustration encountered in the pursuit of these goals. One of the reasons for this lack of preparation, especially among men trainees, may be the peculiar dominance of the mother in many disadvantaged, Negro families, and the concomitant absence of the father both as provider and as role-model. In addition to the relationships within the family, there are the relationships of the family to the rest of the society. Although interviewers found healthy attitudes, considerable lingering resentment from discrimination and humiliations felt early in life was also found. These resentments may lead to various behavior problems in the MDTA classes.

Besides the suggested hypotheses for testing, two recommendations emerged from the study which are worth serious consideration. In the first place, the MDTA trainees need experienced teachers, many of whom are not attracted to this kind of teaching with its relatively low pay and limited opportunities for advancement. Perhaps most important of all is the need for counselors and psychotherapists to deal with the emotional problems of the MDTA students in order to make the vocational training maximally effective.

*INSERVICE WORKSHOP-CONFERENCE ON COOPERATIVE OCCUPATIONAL EDUCATION PROGRAMS, REHOBOTH BEACH, DELAWARE, AUGUST 8-12, 1966

Thirty teachers of various vocational education programs in Delaware convened to discuss the organization and administration of cooperative occupational education programs. Some of the specific objectives of this workshop were to provide (1) opportunity for potential coordinators to discuss common problems and basic issues relative to all cooperative occupational education programs, (2) opportunity for potential coordinators to meet the qualifications for coordinating such programs, and (3) the manpower to meet the needs for Delaware's planned expanded cooperative occupational education programs in all areas. Highlights of the conference addresses are presented. The appendix contains many examples of materials: (1) Recommended Training Procedure, (2) Profile Check Sheets-for a Grocery Store, Nursery and Florist Shop, Gasoline Service Station, Wholesale Automotive Supply Store, (3) Factors Influencing Enrollment in Distributive Education Programs in Iowa, (4) Participating Projects Plan, (5) Why Cooperative Students Should Be Paid for Work in Private Employment, (6) Advisory Committee, (7) Coordination Planning Chart, (8) coordinator's Visitation Report, (9) Progress Report, (10) Vocational Education Community Survey, (11) Selection of Training Stations, (12) Sponsor's Responsibilities, (13) Workshop-Conference Evaluation Form, and (14) a sample of the certificate for completion of the workshop. OFFICE OF EDUCATION

THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY.

AUGUST 8-12, 1966

REHOBOTH BEACH, DELAWARE

VT 009 00

PURPOSES:	To recognize that occupational activity is constantly changing as to requirements and opportunities. To be bold in accepting responsibility in assisting youth to accept and appropriately prepare for these requirements and opportunities. To provide opportunity for potential coordinators to discuss together some common problems and basic issues relative to all cooperative occupational education programs. To provide opportunity for potential coordinators of cooperative occupational education programs to meet the qualifications for coordinating such programs. To provide the manpower and thus meet the needs for Delaware's planned expanded cooperative occupational education programs in all areas.
PROBLEM:	The Organization and Administration of Cooperative Occupational Education Programs.
INSERVICE CREDIT:	Two inservice credits for a minimum attendance of thirty clock hours.
TIME SCHEDULE:	Date of first session - August 8, 1966 Number of sessions - 5 Hours of each session - 9:00 a.m. to 1:00 p.m. 7:00 p.m. to 9:00 p.m.
COORDINATOR:	Mr. Ray G. Schweet, State Supervisor - Office Occupations - Delaware.
CONSULTANTS:	Mr. George McGorman, State Supervisor - Distributive Education - Delaware. Mr. Eugene Dorr, State Supervisor - Distributive and Business Education - Arizona. Dr. Marvin Hirshfeld, Chairman - Distributive Education - Temple University, Philadelphia, Pennsylvania.

Dr. Peter Haines, Professor and Chairman - Business, Distributive and Office Teacher Education - Michigan State University, East Lansing, Michigan.

Dr. Ralph Mason, Professor and Chairman - Division of Business and Distributive Education - Indiana State University, Terre Haute, Indiana.

Dr. Paul M. Hodgson, Assistant State Superintendent for Vocational-Technical Education and Extended Services - Delaware.

Mr. Harold T. Bockman, Director-Executive Secretary - Department of Labor and Industrial Relations - Delaware.

Mr. Frank Vavala - Delaware Employment Security Commission - Delaware.

Mr. Charles Johnson, Guidance Counselor - Milford High School - Delaware.

Mr. William Pfeifer, Coordinator of Distributive Education - Kent Vocational-Technical Center - Delaware.

Mr. Charles Nugent, Manager - J. C. Penney Company, Inc. - Milford, Delaware.

Mrs. Jean H. Losure, Consumer Relations Representative - The Sperry and Hutchinson Company - Baltimore, Maryland.

Dr. William Hanford, Director - Delaware Educational Television Network - Delaware.

Mr. Dick Shively, Community Services Manager - The News-Journal Company - Delaware.

Mr. Richard R. Graham, Operations Manager - Station WDEL - Delaware.

Mrs. Anne Hendrix, Coordinator of Public Relations - Department of Public Instruction - Delaware.

Mr. Clement J. Lemon, President - Delaware State Labor Council AFL-CIO - Delaware.

Mr. Ernest Seitz, Senior Budget Analyst for Education - Delaware.

Miss Sandra McGraw, Former Distributive Education Student - Present Student at Western Michigan University and Cadet Teacher in Delaware.

Mr. Scott Barr, Former Distributive Education Student - Present trainee at Braunsteins in Delaware.

PARTICIPANTS:

Name	School	Home Address
Anderson, Edith	Claymont High School	159 Honeywell Drive, Radner Green, Claymont, Delaware
Bailey, Martha	Kent Voc.-Tech. Center	40 Pine Street, Dover, Delaware

COOPERATIVE OCCUPATIONAL EDUCATION PROGRAMS
WORKSHOP CONFERENCE

PROGRAM

Monday - August 8, 1966

8:30 - 9:30	Get acquainted session
9:30 - 9:45	Dr. Paul Hodgson - Introduction and brief remarks concerning Vocational Education in Delaware.
9:45 - 10:00	Mr. George McGorman - Philosophy of Cooperative Occupational Education Programs.
10:00 - 12:00	Panel -
	Dr. Marvin Hirshfeld - Moderator
	Mr. Harold Bockman, Labor laws, minimum wages, placements and hazardous occupations.
	Mr. Frank Vavala, Interpretation of enrollment trends and placement opportunities.
	Mr. Charles Johnson, Tips and techniques on how to work more effectively with guidance personnel.
	Mr. Charles Nugent, A businessman looks at Cooperative Occupational Education Programs.
	Mr. Clement J. Lemon, The role of the advisory committee members.
12:00 - 1:00	Question and answer period.
7:00 - 9:00	Mr. William Pfeifer, The necessity of enrolling juniors in the cooperative work-experience program.
	Dr. Marvin Hirshfeld, Introduction to basic text, "Cooperative Occupational Education Programs" by Mason and Haines.

Tuesday - August 9, 1966

9:00 - 10:00	Mrs. Nan Hendrix, Public relations - Why and How.
10:00 - 12:00	Panel - Publicity Clinic -
	Mr. George McGorman - Moderator
	Mr. Dick Shivley, Wilmington News Journal
	Mr. Dick Graham, Radio station WDEL
	Dr. William Hanford, E.T.V. - Delaware
12:00 - 1:00	Question and answer period.
7:00 - 9:00	Publicity clinic workshop conducted by:
	Mrs. Jean H. Losure, Consumer Relations Representative - The Sperry and Hutchinson Co.
	Dr. Marvin Hirshfeld, Temple University
	Mr. George McGorman, State Department of Public Instruction.

Wednesday and Thursday - August 10-11, 1966

Organization and Administration of Cooperative Occupational Education Programs.

9:00 - 1:00	Mr. Eugene Dorr, State Supervisor, Arizona
7:00 - 9:00	Dr. Marvin Hirshfeld, Temple University, Pennsylvania

GENERAL TOPICS

The Why and How of Student Recruitment and Selection
Criteria for Selection of Reliable Training Stations
Placement Opportunities for Students

a) Distributive
b) Office
c) Diversified

d) Agri-Business, Home Economic-Distributive, Trade and Industry-Business-Distributive and other vocational-mix programs.

Effective Coordination Visitations
The Role and Responsibilities of Advisory Committees

Friday - August 12, 1966

9:00 - 12:00	Mr. William Pfeifer, What Materials are Necessary for an Adequate Student Learner's Folder and Why. Students (Past and Present) a) Success Stories and Highlights b) What My Job Means to Me Mr. Ernie Seitz - Finances
12:00 - 1:00	Question and answer period
7:00 - 9:00	General Topic for Discussion Problems Confronting the Cooperative Occupational Education Programs and What the Teacher - Coordinator Can Do About Them. Dr. Paul M. Hodgson, Appropriate comments and presentation of certificates to those who attended all sessions and are to receive two inservice credits.

WORKSHOP CONFERENCE PROCEEDINGS

First Session - Monday, August 8, 1966 - 9:00 a.m. to 1:00 p.m.

Thirty teachers of various Vocational Education programs throughout the State convened for the first combined workshop-conference at 9:00 a.m. The meeting was called to order by Mr. Ray G. Schweet, Supervisor, Office Occupations. Mr. Schweet welcomed the group and asked that each teacher give a brief self introduction.

The theme for the workshop-conference was presented, by Mr. Schweet, utilizing the initials of a vocational youth organization, DECA, and a well known national company's tag line, "We try harder."

D - A doing conference
E - Educational
C - Conference
A - Action

"We try harder" - Vocational Education

The specific objectives of the workshop-conference were:

1. To recognize that occupational activity is constantly changing as to requirements and opportunities.

2. To be bold in accepting responsibility in assisting youth to accept and appropriately prepare for these requirements and opportunities.

3. To present the cooperative method, its organization and operation.

Mr. Schweet introduced the first speaker of the morning, Dr. Paul M. Hodgson, Assistant State Superintendent for Vocational-Technical Education and Extended Services in Delaware, who spoke on "The Role of Vocational-Technical Education in Delaware."

Dr. Hodgson first expressed a philosophy to guide analysis and planned expansion of comprehensive educational opportunities (including vocational facilities) for any community, area or county.

Situation

The planners of educational curriculum, over the years, have largely followed the traditional pattern of emphasizing and providing mainly for the academic phase of education and naturally have evaluated the progress of

education on the basis of the academic criteria.

With few exceptions, the employment phase of education has apparently not been included in the thinking and planning of the personnel responsible for stimulating educational development.

Responsibilities

The responsibilities facing all persons (both lay and professional educators) who are concerned with the problem of serving the educational needs of the people are two fold and closely interdependent:

1. The academic phase of preparation for living in our society -- to develop intelligent, informed citizens aware of their privileges and responsibilities and dedicated to the identification, acceptance and fulfillment of these responsibilities.

2. The employment phase of preparation for making a living -- to develop not only good citizens as high school graduates but also to develop citizens prepared to be successful self-supporting contributors to society through economic security.

Basic Principles

When planning for the further development of an educational program, whether its major emphasis is academic, vocational, or general purpose, three basic principles should be observed:

1. It should be educationally sound, based upon the best recommendations, resulting from sound research and conclusions made by capable people in the respective educational field being considered.

2. It should best serve the educational needs of in-school and out-of-school persons within a community, area or county for which it is planned. It should provide opportunities for all persons to meet their educational needs and objectives, while in school or out, whether they plan to continue their formal education beyond high school in such institutions as colleges, universities, or specialized vocational-technical centers or to go directly into employment (possibly planning to take additional training or extension while employed) or just to get a diploma as evidence of graduation from high school.

3. It should be economically effective from the standpoint of value received for over-all costs. The "value received" should be measured by the accomplishment of graduates considered in terms

of the specific purpose for which the program is planned.

Procedures

Both the academic and employment phases of education should be studied thoroughly, analyzed completely and interpreted clearly in every high school community to determine:

1. The extent to which these two fold responsibilities are being met.

2. The specific areas of need which are not being provided for adequately.

3. The best methods of improving programs to meet the broad educational needs as identified.

The speaker next presented the basic principles of operation.

Programs - People (Supervisors) - Communities

1. The over all purpose of each service section of the Vocational-Technical area is to organize, encourage, promote, expand and improve local programs of vocational-technical education for in-school and out-of-school persons preparing for or engaged in employment.

    a. Continue and improve present programs.
    b. Expand and develop new purposes.

2. Federal encouragement for certain types of activities involve providing federal appropriations to cooperatively assist the State in fulfilling its responsibilities. Most federal appropriations require State or local matching ($ for $) in order to be eligible for their use. The law specifices that these funds shall not be used to reduce cost of programs now in operation but to encourage and promote present and new activities and guidelines are provided for their use.

3. A plan prepared by the State and approved by Federal to implement these guidelines serve as the cooperative Federal-State working agreement.

4. The Vocational Education Act of 1963 spells out the specific purposes for which federal funds may be used: secondary, post-secondary, adult, construction, ancillary (services), persons with special needs and work-study.

In conclusion, Dr. Hodgson gave some general observations and guides to development concerning, "The Role of Vocational-Technical Education in

Delaware".

Vocational-technical education is and will continue to be a more vital part of all phases of Delaware's Public School program: secondary, continuing Post High School (not limited to high school graduates) and even Elementary. It will require broadened services from college and university teacher education departments and involve many groups and agencies to help provide special services, evaluation, studies and analysis of results, pilot programs and the like.

Chief School Officers, Principals, Guidance Personnel, Specialist, individual teachers and local consulting or advisory committees will all play a most important role in identifying needs, recommending, applying and evaluating solutions.

Opportunities, assignments and funds never before available are now a responsibility for action on the part of each of us. Although much detail must be handled before specific programs can be initiated, the planning stage is now; and you may expect to receive many suggestions for obtaining information about your students (both in and out of school) and community needs as you see them, as routine plans are approved. Here we are talking about activities quite different from the high school vocational courses now being conducted.

Guide to Development

1. "Past is prologue" - but we* study, learn and select successful past results for present application.

2. "We operate in the present" - and develop programs, we analyze, we encourage and promote, we evaluate and we make recommendations which we believe will result in improvement and we move.

3. "We anticipate future needs" and plan for changes to meet them.

---

*"We" used here means all groups referred to, including the State Department Staff and others you may add.

A FLOW CHART – OPPORTUNITIES FOR LEARNING

THE INDIVIDUAL'S
EDUCATIONAL RESPONSIBILITIES & OBJECTIVES

- CHOICE OF OBJECTIVE
- PURPOSE OR REASON FOR CHOICE

Paul M. Hodgson
Assistant State Superintendent
for Vocational Education
Dover, Delaware

Next on the program was, "A Philosophy of Cooperative Occupational Education Programs" presented by Mr. George McGorman, State Supervisor for Distributive Education in Delaware.

Mr. McGorman expressed the view that training which would prepare students for vocational-technical careers should include opportunities for these students to apply, in a practical situation, the principles that have been introduced in the classroom. The cooperative programs provide such opportunities through the use of approved training stations in the community. In such programs the training station acts as a laboratory where students may complement, supplement, and implement learnings. Therefore, the cooperative program provides the student with the opportunity to take advantage of the proven educational values of practical application.

Concluding the first session was a panel discussion on the following topics, (1) "Labor laws, minimum wages, placements and hazardous occupations;" (2) "Interpretation of enrollment trends and placement opportunities;" (3) "The role of the advisory committee members;" (4) "A businessman looks at Cooperative Occupational Education Programs" and (5) "Tips and techniques on how to work more effectively with guidance personnel".

Dr. Marvin Hirshfeld, Chairman, Distributive Education Department, Temple University, Philadelphia, Pennsylvania, served as panel moderator along with:

Mr. Harold Bockman, "Labor laws, minimum wages, placements and hazardous occupations."

Mr. Frank Vavala, "Interpretation of enrollment trends and placement opportunities".

Mr. Clement J. Lemon, "The role of the advisory committee members".

Mr. Charles Nugent, "A businessman looks at Cooperative Occupational Education Programs".

Mr. Charles Johnson, "Tips and techniques on how to work more effectively with guidance personnel".

Mr. Bockman spoke first and covered the role of the Delaware State Labor Council and its close working relationship with all phases of vocational education. Wage and hour laws, placements and hazardous occupations as they apply to student-learners were included in Mr. Bockman's presentation. He also spoke of the need for a continued awareness of youth protection and an alertness to new trends in employment as they affect the student-learner.

Mr. Vavala introduced his topic by citing Delaware's population growth and the industrial and occupational changes which are connected to this growth. He pointed to an ever expanding labor movement featuring more women moving into employment. Over one third of those presently employed are women.

A number of other factors must be considered as they apply to placement opportuntities and enrollment trends. Namely, agriculture employment is declining and automation is having a definite affect upon industrial employment. Machines are now taking over man. 750,000 jobs will be wiped out because of automation. However, the service industry is growing and the number of professional and technical jobs is increasing throughout the state. The United States has never been able to produce the number of students to qualify for such jobs. Approximately 150-175 professional jobs are open in the Dover, Delaware area. Yet, we haven't the right people to qualify for such jobs.

The schools have a responsibility to meet this change by providing the kind of education and technical knowledge the individual will need 5-10-20 years from now.

Mr. Lemon discribed the advisory committee as being necessary and of vital importance to all programs. But, only if it functions properly will it contribute to the growth and expansion of the cooperative occupational education program. If the advisory committee is to function properly, it must of necessity operate in the present, analyze and anticipate future needs, and have an interest.

Mr. Lemon stated that the advisory committee can learn a great deal about the young. The committee can get vital information that the young person wouldn't even tell his own parents.

"A businessman looks at Cooperative Occupational Education Programs", was discussed by Mr. Nugent, who at the outset expressed high praise for such programs. He felt that they were beneficial to the students and served the purpose for which they are intended. Mr. Nugent offered several pointers for a successful student-learner-employer relationship. Honestey, appearance and attitude were the key words cited in this relationship.

Mr. Charles Johnson pointed out that guidance is a service area. It is the "heart beat" of the school and may be considered a public relations office. Guidance helps the individual to become a whole student.

Mr. Johnson suggested several points which would contribute toward an effective relationship between guidance personnel, coordinators and students.

(a) Meet with guidance personnel as often as possible to describe the program.

(b) Invite guidance personnel to meeting, banquets, etc.

(c) Inform guidance personnel of successes of former students.

(d) Take guidance personnel on tour of training stations.

(e) Help plan Career Days.

(f) Act as a resource person for occupational information and additional educational opportunities.

Mr. Johnson concluded his presentation by relating the ways in which guidance personnel can help the coordinator.

(a) Arranging schedules for cooperative students.

(b) Making student records available to the coordinator.

(c) Testing of students - potential and actual -.

(d) Talks with parents and handling of family problems.

(e) Aid in recruitment and selection.

Second Session - Monday, August 8, 1966 - 7:00 p.m. to 9:00 p.m.

The second session was opened by Mr. William Pfeifer, Coordinator of Distributive Education at Kent Vocational-Technical Center, Woodside, Delaware. Mr. Pfeifer reported on, "The Necessity of Enrolling Juniors in the Cooperative Occupational Education Program."

Mr. Pfeifer introduced his topic by first discussing the differences which exist between the general work-experience program and the cooperative occupational education program.

General	Cooperative
1. Student does not have a career objective.	1. Guide student toward a career objective.
2. Student is a producer.	2. Student is a learner.
3. No relationship between job and class instruction.	3. Relationship between job and class instruction.

General	Cooperative
4. Job approval only - no supervisor or school-employer cooperation.	4. Approved training station and job under supervision of coordinator in cooperation with employer.
5. May or may not be paid.	5. Paid.
6. Open to any student.	6. Student selection.
7. Utilizes any employer.	7. Approved training station.
8. Extra-curricular - no credit received.	8. Curricular - credit received.

The advantages of a cooperative program for students of less than senior grade should be considered in light of the prime goal of such a program. Namely, to give the students an opportunity to develop their occupational goals.

(a) Employer may desire an opportunity to observe a student-learner for a longer period of time.

(b) Adequate training for a variety of jobs necessitates a program of more than one year.

(c) Offers a better opportunity to coordinate classroom theory with on-the-job training.

(d) Greater benefits regarding job placement, student selection, employer satisfaction, student maturity are derived from a longer program.

(e) Aids in the teaching of general related information.

(f) Provides continuity of program from year to year.

Dr. Hirshfeld introduced the text, "Cooperative Occupational Education and Work Experience in the Curriculum," by Mason and Haines, to be used throughout the remainding sessions. Participants were asked to review Chapters 7, 8 and 9.

Third Session - Tuesday, August 9, 1966 - 9:00 a.m. to 1:00 p.m.

Mr. Schweet introduced Mrs. Nan Hendrix, Coordinator of Public Relations,

State Department of Public Instruction, Dover, Delaware.

Mrs. Hendrix pointed out that good public relations is nothing more than just good common sense. Being pleasant to people is, in part, the answer. Public relations is a kind of personal reputation. Make public relations an integral part of your educational program. In fact, good public relations is needed to communicate to the various publics that avail themselves of education.

Public relations activities are those which help create the kinds of attitudes and image toward you and your program. You should want your program to be understood, enthusiastically accepted and supported, and produce the desired results.

The public relations department, as specialists in dealing with the various media, exists to help you do a good job of selling to each of your publics. The Newsletter is one means we have of helping you to bridge the gap between you and your publics. However, we are available to help you in all phases of your public relations.

Remember, in the final analysis, public relations is something you can and must do if your publics are to be informed as they need to be.

Guidelines for Good Public Relations

1. Adapt your public relations to each particular situation, purpose or person.

2. Place yourself in the other person's position and look at the situation from his standpoint. - Know your publics.

3. Be enthusiastic about your program.

4. Have all the pertinent facts.

5. Plan for action.

6. Communicate through the use of proper words.

Mrs. Jean Losure, Consumer Relations Representative, The Sperry and Hutchinson Company, Baltimore, Maryland, was presented to the group and discussed with them "Ways and Means."

At the outset,Mrs. Losure pointed out that enthusiasm is the key word to money making projects. Dependable, enthusiastic workers make for a successful project.

Successful fund-raising, whether for members-only or large events that require public support, must follow some basic principles. You must examine your club's need for funds, study your membership and then select fund-raising projects suited to your group and your community.

For Every Fund Raising Project

I FOR THE MONEY

Be practical. Set a fund-raising goal your group can achieve.
Be careful. Don't ask the public to contribute toward something that benefits only your members.
Be informed. Be sure members know what cause you are raising funds for, and how the money will be used.
Be enthusiastic. It will help attract workers and contributors.

II FOR THE SHOW

Be realistic. Choose a project your "public" will enjoy.
Be wise. Clear the proposed project with the club membership.
Be alert. Avoid possible conflict with a competing event.
Beware! Check for possible local, state, Federal or union regulations.

III TO MAKE READY

Be sensible. Choose responsible committee chairmen.
Be organized. Develop a plan, a calendar and check lists.
Be brave. Ask anybody you can think of to contribute.
Be business-like. Price your product, service or entertainment sensibly.
Be professional. Publicize and advertise your event. Use every promotional tool at your disposal.

IV TO GO

Be prepared. Double check every detail. Provide for emergencies.
Be neat. Clean up -- leave no mess.
Be appreciative. Send prompt thank-yous to helpers and donors.
Be a record-keeper. Ask committee chairmen to submit brief summaries, add your own, plus complete treasurer's report on cost and profits. These records are valuable.
Be successful!

At the conclusion of her presentation, Mrs. Losure handed out a publicity guide kit to each participant.

The remainder of the third session was devoted to a panel discussion of "Good Public Relations Through The Various Media." Members of the panel were: George McGorman, who acted as moderator, Dick Shively, Dr. William Hanford, and Dick Graham.

Mr. Omer J. (Dick) Shively, Jr., Community Services Manager, The News-Journal Company, Wilmington, Delaware. Native of Eastern Shore of Maryland, graduated from Wilmington Public Schools, and from courses in advertising, salesmanship and news reporting at International Correspondence School.

He started his newspaper career in 1945; worked on papers in Easton (Advertising Manager and feature writer) and Pocomoke City, Maryland (Vice-President and General Manager) before returning to Wilmington area in 1958.

Mr. Shively is very active in community and professional organizations. He was the youngest president of a Chamber of Commerce in Maryland (Easton) at the age of 25; was later president of Chamber of Commerce in Pocomoke City. He has been a member of the Board of Directors of Maryland-Delaware Press Association since 1951. He is currently 1st Vice-President. He is also chairman of the association's education committee. Currently Vice-President of Eastern Region, National Newspaper Promotion Association. He has attended courses in Public Relations, Advertising, etc. at Columbia University and other institutions.

Dr. William Hanford was hired as full-time Director of Delaware Educational Television Network on July 1, 1965. Since December, 1964, he had been engaged as a consultant in establishing Delaware's new statewide closed-circuit educational television system.

He did his undergraduate work at the University of Notre Dame, and received his Masters Degree in Humanities and his PhD in Radio and Television from Wayne State University, Detroit, Michigan, where he served on the faculty of Wayne State University, and worked with the Educational Television Station, WTVS, Channel 56. Dr. Hanford has been a teacher, at the secondary and university levels, for the past seventeen years.

Dr. Hanford is a member of the National Association of Educational Broadcasters, the American Association of University Professors, and the Speech Association of America.

Mr. Richard R. Graham is the Operations and Program Manager of station WDEL in Wilmington, Delaware. He is a sixteen year veteran of both radio and television broadcasting having worked those years along the eastern seaboard. His first exposure in communications was as a radio announcer in Vineland and Atlantic City, New Jersey and Chester Pennsylvania before serving three and a half years in television as a staff

announcer in both Wilmington and Philadelphia markets.

Following Mr. Graham's television stint he returned to radio in Wilmington, at WDEL as host of the morning "Musical Clock" Show. A year and a half ago he was appointed Operations Manager and Program Manager at WDEL thus limiting his "on the air" work to a minimum.

Mr. Shively discussed the newspaper as a means of obtaining good public relations. Along with his discussion, Mr. Shively handed out an Educator's Kit which contained an outline of programs and services available to educators and students from the Community Services Department of The News-Journal Company, Wilmington, Delaware.

Rules for Effective Newspaper Publicity

1. Know your media.

2. Learn what news is:

   (a) People make the best news.

3. Learn the rudiments of news writing.

4. Simply note the facts.

5. Be complete in giving your:

   (a) Name
   (b) Address
   (c) Etc.

6. If possible double space and type your copy:

   (a) 1" margins to the right and left hand side of page.
   (b) Use 81/2" x 11" plain white paper.
   (c) Start typing at least 1/3 the way down on the page.

7. Work in advance - there is competition for space - be prepared for cuts.

8. Never neglect your media.

Guidelines for Educators
(What Makes News)

1. Scholastic Honors

2. Election of School Wide Officers

3. School Projects

4. Projects that reflect enterprise by students

5. Stories that reflect changing social moves of teens

6. News of graduating seniors

7. Students who win scholastic scholarships

8. Honors to faculty or students

9. Good news concerning students, community or school

10. Announcements of student participation

11. Any way usual people do unusual things

12. Stories on speeches by people in the limelight

13. New Challenges in education

Guidelines for Photographs
(What Makes a Good Picture)

1. A picture must make an impression

2. A picture must convey a mood and/or event

3. An unusual picture catches the eye

4. One or two individuals better than a group

Dr. Hanford introduced his presentation by giving a brief history of Delaware's State Educational Television Network. The network began in July of 1964 and has only been transmitting since last fall.

Dr. Hanford pointed out that the State E. T. V. is a closed circut network which allows us to do many things not available to a network operating under an open broadcast system. Program content is handled by Mr. Robert Fox, T. V. Curriculum Director. Mr. Fox has been and will continue to be anxious to present programs featuring all instructional areas. The future will see many new and exciting programs on Delaware E. T. V. A cooperative effort will see your program on future E. T. V.

Mr. Graham spoke of radio as one approach to publicity. All radio stations are more community minded than in the past. Don't be afraid to make a call to your local station. If you have something to publicize. However, plan in advance. Many of the same guidelines and rules which apply to obtaining newspaper publicity are applicable here.

Basic Ways to Make News

1. Present a local aspect of a news event which is timely
2. Conduct a poll or survey and explain the results; issue a report
3. Arrange for the press to meet an important person or someone with some interesting views who will express them
4. Arrange for a testimonial
5. Make an analysis or prediction
6. Arrange for a speech -- and be sure to provide advance copies
7. Take part in a controversy -- but make sure you think before you speak
8. Form a committee and announce their names -- and tell what it's expected to do and why
9. Hold an election
10. Announce an appointment -- or any personnel changes
11. Celebrate an anniversary
12. Plan and announce some special event tying in with a holiday
13. Make -- or receive -- an award
14. Hold a contest -- and be certain to announce the winners.
15. Pass a resolution
16. Appear in public for a speech or some other event
17. Write a letter to the editor
18. Release a letter you have received

19. Apply the results of national reports and surveys to the local area

20. Stage a debate

21. Issue a protest -- or praise

22. Stage a demonstration -- and we don't mean a sit-in

Campaign Publicity Ideas

I. Newspaper

(A) News Articles
1. Announcements of project
2. Appointment of campaign chairman
3. Naming of other campaign officials
4. Coverage of meetings
5. Relating campaign progress
6. Appeals from chairman
7. Endorsements from civic leaders and civic groups
8. Campaign reports at timely intervals
9. Final results
10. Acknowledgment of public response and appreciations from campaign chairman

(B) Feature Articles
1. Story about the merits and worthiness of the cause or movement
2. Article citing need and benefits of the undertaking
3. Interviews with campaign chairman and/or respected leaders in the community justifying support
4. Review of campaign in progress with pictures illustrating activities
5. Description and accounts of special events associated with campaign. Generous use of pictures

(C) Editorials
1. Urge support for worthy cause
2. Commend community-wide effort
3. Praise community for response

(D) Advertising
1. Large ads appealing for public cooperation (sponsored by business firms)
2. Drop-in ads with cooperation of local merchants

II. Radio

(A) Timely news coverage (same as newspaper)

(B) Special Features
1. Panel discussions
2. Short talks
3. Interviews

(C) Advertising
1. Public service spots (free)
2. Announcements sponsored by regular commercial advertisers

III. Television

(A) News
1. Such coverage as available of campaign developments

(B) Features
1. Panel discussions
2. Brief talks
3. Interviews

(C) Advertising
1. Spots with slides (public service and sponsored)

IV. Outdoor Advertising

(A) Solicit free space from large firms for posters
Paper purchased and designed by campaign organization

V. Miscellaneous Promotional Aids

(A) Descriptive folders and/or fact sheets
1. Brief, easy-to-read (simply written) story of the project Outline purpose of campaign, the goal, why the requested help is needed, what you hope to accomplish for the object of our solicitation, and how it will benefit the community
2. Order in quantities sufficient for widest distribution throughout the area

(B) Window Cards
1. For display in store windows and public places
2. Wording should be very brief and to the point such as "Support your United Fund"
3. Use two colors and pictorial illustration (if practical) to attract attention.

(C) Door Stickers
1. Small adhesive paper stick-ons bearing campaign emblems or slogan for visual support (widely and profusely posted).

(D) Street Banners
1. Simply worded appeal in behalf of the movement suspended across thorough fare or against conspicious back-drop.

(E) Lapel Buttons and Pins
1. Imprint campaign emblem or slogan
2. Order in quantities for wide distribution

Fourth Session - Tuesday, August 9, 1966 - 7:00 p.m. to 9:00 p.m.

Mrs. Jean Losure introduced the session with a film, "The Supermarket," after which she pointed to five "Giant Steps" which might be applied to public relations and/or salesmanship.

G - Greeting
I - Interest
A - Assurance
N - Name
T - Thank-you

Following Mrs. Losure's presentation, the participants broke up into five groups for the purpose of writting an article covering the conference which would be sent to all newspapers throughout the state. An additional assignment, the outlining of a "Calendar of Events" for a local program, was constructed by each group.

Vocational Education Conference in Rehoboth Beach

Improvements in vocational education for Delaware are being discussed at Rehoboth Beach this week in the first state-wide linking of industrial and education experts.

The conference, spotlighting organization and administration of cooperative occupational education programs, began Monday and ends Friday under the sponsorship of the State Department of Public Instruction.

Purpose of the meeting is to provide intensive study of curriculum construction and vocational education trends. Vocational educators from throughout the state contributed to the meeting, as well as a number of persons from industry who served as panelists.

Monday's program was devoted to a discussion of the industrial needs for

vocational education. Dr. Marvin Hirshfeld served as moderator of a panel comprised of labor leaders and educators who discussed the functioning of vocational education in relation to industry.

Serving on the panel were Harold Bockman, Frank Vavala, Charles Johnson, Clement J. Lemon and Charles Nugent.

During an evening session, William Pfeifer explained the necessity of enrolling high school juniors in cooperative work-experience programs.

A group of public relations experts participated in panel discussions and clinics on Tuesday, explaining to vocational educators the necessity of using public relations in their work and the best ways of obtaining better relations with the media.

Offering suggestions in public relations were Dick Shively of the Wilmington News-Journal, Dick Graham of WDEL, Dr. William Hanford of the Delaware Educational Television Network, Mrs. Jean Losure of the Sperry and Hutchinson Co. and Mrs. Nan Hendrix of the public information office of the State Department.

Sessions on Wednesday and Thursday were aimed at the why and how of student recruitment and selection for vocational education programs, with special attention to criteria for selection of reliable training stations for the experience phase of vocational education programs. Dr. Marvin Hirshfeld of Temple University and Mr. Eugene Dorr, Arizona state supervisor for vocational education, conducted the program.

Friday, the wrap-up day for the meeting, will be directed toward study of finances for vocational education and problems encountered by instructors in the programs.

Ernie Seitz of the state budget office will discuss finances, and Mr. Pfeifer will talk about adequate materials.

The meeting will close with presentation of certificates to the 35 vocational educators who attended the meeting at the Atlantic Sands.

Fifth Session - Wednesday, August 10, 1966 - 9:00 a.m. to 1:00 a.m.

Dr. Marvin Hirshfeld opened the session by introducing the need for a written document dealing with a state-local plan for administration of various vocational-technical education programs. Such a document might include the following information:

1. Orientation
   a. Objectives of the program

b. Opportunities in the field

2. Plans of Operation
   a. High School Program
   b. Post-High School Program
   c. Adult Program
   d. Special Needs Program

3. Reimbursement
   a. Operation Expense
   b. Travel
   c. Adult Extension and Pre-Employment Training
   d. Equipment
   e. Area Vocational-Technical School
   f. Research, Experimental, Developmental and Pilot Projects

4. The Coordinator
   a. Length of Employment
   b. Time to Coordinate
   c. Selection and Placement of Students

5. The Training Sponsor

6. Advisory Committees

7. Youth Program

Dr. Marvin Hirshfeld then pointed out "How and Why of Student Recruitment and Selection." Internal coordination is the base of student recruitment and selection. Successful recruitment is a must in order to achieve a quality program.

There is a continuous demand for promotion in spite of the many problems confronting vocation education programs in connection with recruitment. Proper recruiting requires strong student and public interest in the program. This interest can only be earned and maintained through high program standards.

How To Recruit

Publicize your program through the use of:

1. Printed materials

2. Posters

3. News articles in the local newspaper, the school paper

4. Radio and Television programs

5. Assembly program using present and former students

6. Application blanks

7. Interest groups
   a. Teachers
   b. Guidance personnel
   c. Administrators
   d. Parents

If a proper effort has been expended in a good recruitment campaign, which tells the purposes and qualifications of the program, then a sufficient number of applications should follow so that a true selection of students is available to the coordinator.

How To Select

1. Pre-selection
   a. Size of enrollment
   b. Cooperative program is a training program not a placement opportunity only.
   c. Prospective training stations - number and occupations available

2. Criteria for selection
   a. Age
   b. Occupational objective and interest
   c. Job opportunities
   d. Training station requirements
   e. Scholastic standing - past record
   f. Health record
   g. Required courses - pre-requisites
   h. Grade level
   i. Parental permission
   j. Personality and character traits
   k. Individual student conference
   l. Employment interview
   m. Test results (apptitude - interest)

The next speaker to be introduced was Mr. Eugene Dorr, State Supervisor, Distributive and Business Education, Arizona.

Mr. Dorr's major topic was "The Organization and Operation of Cooperative Occupational Education Programs."

As an introduction, he pointed out that the school is the "heart" of any

cooperative program, the teacher a "doctor" and the student his "patient." The "doctor", utilizing the right equipment, analayzes his "patient." He should let the "patient" tell him how he feels. This analysis is a cooperative effort on the part of the teacher, the student, and the training-station sponsor. He said that the teaching "equipment" included the following:

1. Course of Study - What you are going to do.

* 2. Recommended Training Procedure - Order of training to be determined by the employer.

* 3. Profile Check Sheet - What and where the student thinks he has done or been.

Mr. Dorr pointed out that the classroom instruction presented several questions which must be answered.

1. In what kind of jobs am I going to place my students?

2. What kind of program am I going to operate?

3. What <u>must</u> the students know to do a job?

4. What <u>should</u> the students know?

5. What would be <u>nice</u> for them to know?

6. What would they <u>like</u> to know?

This portion of his talk was based on transparencies which he had prepared and used previously.

MUST KNOW - This part of the instruction includes attitudes, knowledges, and abilities which all students must possess in order to take their place as employees and do a job and also those technical skills which are specific to his career field. ie. - sales - advertising - display in Distributive Education -- Typing - Shorthand in Office Occupations -- Foods and Fabrics in Home Economics.

---

*Copies of these forms are included in the appendix.

SHOULD KNOW - Here, in this body of instructional material, the student is given those attitudes, knowledges and abilities which are pertinent to his specific job. Much of this material is presented through individualized instruction, using, among other things, the programed method.

NICE TO KNOW - This area allows the student to elect those subjects which might prove to be of value to him as he progresses in his chosen career objective.

ie. Typing - Bookkeeping in Distributive Education
Sales - Advertising in Office Occupations
Sales - Shorthand in Home Economics
Sales - Bookkeeping in Trades and Industry
Sales - Business Law in Agriculture

LIKE TO KNOW - The last area includes those subjects which the student could elect based only on what he would "like to know."

ie. Music, Foreign Language, Chemistry, etc.

The triangle could serve to illustrate the overall instructional program. The base of the triangle comprises those subjects or attitudes, knowledges and abilities which are applicable to all students. On top of this material, the student receives his technological training. Finally, the three areas are channeled into the apex of the triangle which is his cooperative occupational education training or discipline. Here the student puts into practice the theory (attitudes, knowledges and abilities) which he has received in the classroom.

A great deal of instruction in the various subject matter areas should be consolidated and integrated. A written project assigned in the technology area should be graded by a teacher in the fundamental skills area as well as the technology area. ie. A manual on cosmotology should be graded by the teacher of English in addition to the teacher of cosmotology.

Mr. Dorr handed out two mimeographed sheets: (1) Participating Projects Plan and (2) Why Cooperative Students Should Be Paid For Work In Private Employment. He pointed out how the first form is used in classroom instruction in lieu of or prior to the cooperative method. Copies of each are included in the appendix.

Sixth Session - Wednesday, August 10, 1966 - 7:00 p.m. to 9:00 p.m.

Mr. Dorr opened the session and handed out mimeographed sheets on "Factors Influencing Enrollment In Distributive Education Programs in Iowa." (See appendix)

Many of the reasons and sources cited by the students in the study would apply to all cooperative occupational education programs.

The balance of Mr. Dorr's presentation, during this session, was in reference to the advisory committee. He pointed out the tremendous need for an advisory committee by relating a few of the many ways in which the members

can contribute to the growth and expansion of the cooperative occupational education program.

Things they can do or recommend:

1. Suggest subjects, course content, and special emphases that should be included in high school training programs.

2. Prevent exploitation of students and assure that the total educational program is of primary concern.

3. Help establish the policy of recognizing the trained student by providing preferential job opportunities.

4. Inform high school students of careers in business industry and production.

5. Observe and patticipate in the high school program as speakers, demonstrators or judges.

6. Help with room layouts and equipment.

7. Evaluation of the program.

8. Help establish adult education programs.

9. Give financial support to the program.

10. Take part in committee surveys.

The needs and objectives of the specific program will vary in every community and will determine the important issues with which the advisory committee will be concerned.

The organization of the advisory committee in vocational education has of necessity utilized the horizontal committee structure. Mr. Dorr used the following examples:

Distributive Education	Office Occupations
1. Shoe store	1. Insurance
2. Department store	2. Industrial
3. Auto Supplies store	3. Retail
4. Variety stores	4. Lawyer

Distributive Education	Office Occupations
5. Speciality stores	5. Medical
6.= Hardware-Lumber	6. Hospital
	7. Accounting
	8. Finances

The organization of the above committee members should also be given geographic representation and representation by interests. ie. parents, alumni, employers, management, etc.

The horizontal committee structure should, as needed, make use of a verticle or sub-committee structure as follows:

Distributive Education Advisory Committee

1	2	3	4	5	6
1		1			1
2		2			2
3		3			3
4		4			4
5		5			5
Alumni		Auto			Wholesale or Adult

Things they can do or recommend:

1. Placement opportunities
2. Youth Program activities
3. Facilities and planning
4. Follow-up studies
5. Metropolitan needs
6. Special programs
7. Adult courses
8. Course content

A complete picture of the purpose, responsibilities and organization of advisory committees was summarized in a three page mimeographed outline which Mr. Dorr handed out and discussed with the group. A copy of this outline is included in the appendix.

Following Mr. Dorr's presentation, the participants were divided into three groups. These groups were given a mimeographed list and asked to select one topic on advisory committees for discussion purposes. The groups were instructed to meet separately and discuss their selected topics. A report on these discussions would be made to the conference prior to the close of this session. The selected topics developed lively and enthusiastic discussion.

Seventh Session - Thursday, August 11, 1966 - 9:00 a.m. to 1:00 p.m.

The seventh session was opened by Mr. Dorr who introduced his topic, "Coordination and How to Coordinate."

The coordinator may be compared to a "juggler" in his handling of student, student-employee, employer and etc.

Coordination, to be effective, must be planned and follow a set of guidelines.

WHAT IS COORDINATION?

1. Coordination is a check on student progress.

2. Coordination is good public relations.

3. Coordination is a periodic job analysis.

<u>Guidelines for Effective Coordination</u>

1. Plan all coordination visits - to employer, trainer and student.

2. Acquaint employer-trainer and student with progress report grading system.

3. Set-up, with the employer, a recommended training procedure.

4. Follow-up all visitations with the student.

5. Use visits to sell and promote the program.

6. Review profile check sheet periodically with student.

7. Make use of forms such as:

   * a. Coordination Planning Chart
   * b. Coordinator's Visitation Report
   * c. Progress Report

Coordination, in the final analysis, is a check on how well classroom instruction in the three classroom learning areas (1) general related group, (2) occupational group and (3) specific job group is being used on-the-job to fulfill the stated career objective of the student-learner.

Mr. Dorr continued with a discussion concerning the community survey to be used in selling cooperative occupational education programs to a community and school administration. When you have established a need for a program, interest, desire and action will follow. A copy of a survey form is included in the appendix.

Mr. Dorr briefly presented a few facts pertaining to the selection of training stations and the sponsors responsibilities. He handed out mimeographed sheets on this subject. Copies are included in the appendix.

Eighth Session - Thursday, August 11, 1966 - 7:00 p.m. to 9:00 p.m.

The session was devoted to the preparation of "Recommended Training Procedure" guides for specific jobs within a broad occupational field. Each participant selected a specific job in which he might place a student-learner.

The session produced many excellent "Recommended Training Procedure" guides.

---

* Copies of these forms are included in the appendix.

Ninth Session - Friday, August 12, 1966 - 9:00 a.m. to 1:00 p.m.

Mr. Pfeifer opened the session and spoke on the topic "What Materials Are Necessary for an Adequate Student-Learner's Folder and Why?"

A number of different materials should be included for an adequate student-learner's folder. Each aids the coordinator and the student in achieving the desired objectives. These materials include the following:

1. Student Application - contains information about the student which will aid in student selection, in the student interview and throughout the student's enrollment in the program.

2. Student Interview Report - available for periodic review, if necessary, of student's attitudes, interests, etc.

3. School Record Information (Apptitude - interest - intelligence test scores) - aids in student selection and job placement.

4. Test Scores - (administered by the local State Employment Service office) - includes tests scores by occupational classification for intelligence, verbal ability, numerical ability and clerical abilities - for student selection and job placement.

5. Class Schedule of Student - knowledge of student's other subjects and a reference for contacting student when needed.

6. Student Progress Report - a measure of job performance evaluation.

7. Training Plan and Training Memorandum - presents ultimate vocational objective and competencies needed for a career in the chosen occupation, serves as an agreement with the employer.

8. Parental Permission - permission for student to participate in a cooperative occupational education program - parent is knowledgeable of the type of training student is receiving in the program.

9. Profile Check Sheet - self-rating sheet to assist trainee in evaluating himself and used as a guide for future instruction both in the classroom and on-the-job.

10. Record of Hours and Wages - used for reporting purposes and serves as a check on hours worked each week and pay received.

Mr. Pfeifer then introduced the topic "Youth Organizations in the Cooperative Programs."

He pointed out that youth organizations are an integral part of a cooperative program. Through youth activities, the student is exposed to many experiences which contribute to the total instructional program.

Mr. Pfeifer mentioned a number of youth organizations that are associated with specific occupational areas. As a Coordinator of Distributive Education, he spoke mainly of the DECA organization and how it has contributed to his student's leadership and social development and occupational understanding.

The benefits to be derived from a youth organization far outweigh the time investment of the coordinator and the student. Properly planned and organized youth activities are a tremendous stimulus to proper motivation. The recognition and educational experience receiving through participation in the various activities and projects cannot be overlooked. Prestige, recognition and experience all contribute to the student's willingness and motivation.

In conclusion, one key to success in cooperative programs is the youth organization. It comprises one-third of the total program and surely everyone who comes in contact with a youth organization will benefit from his association.

The next speaker to be introduced by Mr. Schweet was Mr. Ernest Seitz, Senior Budget Analyst for Education, Delaware. Mr. Seitz spoke on the topic, "Finances and Your Program."

As an introduction, Mr. Seitz mentioned the increasing State appropriations for Vocational Education since 1952. He called the attention of the group to the fact that funds needed to operate vocational programs at the local level are only obtained through proper budget requests. An estimated budget for each program will aid the individual school in preparing its budget.

At this point, Mr. Seitz discussed payroll procedure, purchase orders and invoices, travel vouchers, personal reimbursements and the new pension system. Several of these topics developed some lively and enthusiastic discussion.

Miss Manera Constantine, Distributive Education Coordinator at Newark High School, Newark, Delaware, instructed the group in answering the, "Workshop-Conference Evaluation Form." All questions appearing on the form were discussed by the group. Each participant was then given ample time to complete his own evaluation form. A report on the evaluation would be made to the conference at the next session.

Tenth Session - Friday, August 12, 1966 - 7:00 p.m. to 9:00 p.m.

The final session was opened by Mr. Schweet who introduced the members of the distinguished panel. Topic for discussion was, "What the Cooperative Program Means to Me." Panel members were Miss Sandra McGraw, Miss Pat Dunack, Miss Sue Emery, Mr. Pat Martin and Mr. Scott Barr. Miss McGraw and Mr. Barr were former D.E. students and the remainder of the panel members are present D.E. students.

Sandra, now a student at Western Michigan University, expressed her extreme gratitude for the opportunity provided her through a cooperative program in distributive education. She felt that the program offered a variety of challenging experiences which in turn gave her the motivation and enthusiasm to continue her education in the field of marketing and distribution. Sandra plans, upon graduation, to teach Distributive Education.

The three present students gave their impressions of the value of the cooperative program to them. Each then pointed out a few highlights of the past year as D.E. students and members of the national youth organization, DECA. All three were national winners in competition sponsored by DECA.

Scott had received his initial training in a department store as a D.E. student and is presently an assistant manager for the same department store chain.

He stated he had found a reason for attending school through the D.E. program. Prior to this time, Scott didn't have a career objective and did not want or appreciate the subjects he had taken in previous years.

Scott found D.E. and his job both interesting and challenging. He was now ready to study and learn as much as possible about his chosen field so that he could progress. This opportunity, according to Scott, has given him a great deal of satisfaction.

Miss Manera Constantine presented a report on the evaluation of the workshop-conference.

The general evaluation of the workshop-conference was extremely favorable. It was unanimously agreed that the timing and locale of the conference were very conducive in establishing a professional atmosphere and the psychological benefit derived proved to be most advantageous. This conference helped to close the gap among the various areas of vocational education.

The consensus of opinion was that Mr. Eugene Dorr, State Supervisor of Distributive Education and Business Education in Arizona, was most

informative and inspiring.

Several suggestions were made in an effort to improve future conferences of this nature. Members agreed that each should wear a name tag and a roster of participants names and addresses should be provided. A pre-conference publication should be sent to selected participants, including a program of topics, speakers and activities so that members can prepare agequately. It was suggested that a list of resource materials be made available in specific vocational areas for future reference.

The members emphasized that this conference gave them great inspiration to take back to their co-workers and more professional personnel be invited to attend future meetings, including chief school officers and guidance counselors.

This first conference was considered most challenging and comprehensive in its explanation of the cooperative program.

Suggestions for future topics included individual application of co-op methods in specific areas of vocational education (such as T. & I. and Home Economics) as well as professional speakers representing each field of vocational education. Ideas gathered from these lectures could then be elaborated upon in longer individual group discussions within specific vocational areas.

Members unanimously agreed that this 5 day program was most comprehensive and beneficial and should definitely be continued each year in an expanded form. This conference was most professional although it was conducted in an informal manner and instilled in the participants a great sense of professional pride in vocational education.

A copy of the evaluation form including a compilation of the data is included in the appendix.

Dr. Hodgson, Assistant State Superintendent for Vocational-Technical Education and Extended Services, complimented the group on its enthusiasm and dedication to the upgrading of vocational education programs in Delaware.

He then presented certificates to all participants attending the workship-conference. A copy of the certificate is included in the appendix.

Mr. Schweet adjourned the workshop-conference.

APPENDIX

RECOMMENDED TRAINING PROCEDURE*

(Order of training to be determined by store)

A. Learning and performing store system and routine of mechanical details.

1. Rules and regulations
2. Personal conduct on the job
3. Fill out store forms and records
4. Operation of cash register
5. Sales tickets, cashiering, wrapping
6. Store services
7. Charge and check identification and authorization
8. Other credit plans
9. Store organization

B. Stockroom procedure.

1. Keeping stock - perpetual or periodic count
2. Taking inventory
3. Filling orders from the floor
4. Placing and storing merchandise
5. Mark-ups or mark-downs (before or after sales)

C. Receiving room procedure.

1. Filing claims for damaged merchandise
2. Marking merchandise
3. Follow-up on overdue shipments
4. Receive and check merchandise

D. Display.

1. Arrange counter and interior case displays
2. Coordinate display with store promotion or advertising
3. Work with window display man in selecting merchandise for window display
4. Write copy for showcard
5. Care of merchandise removed from window display

---

* Developed by Tucson Distributive Education Coordinators.

EXHIBIT A.1

E. Advertising.

1. Learn the procedure for planning an ad - timing, selection of merchandise, etc.
2. Copy writing
3. Familiarity with advertising department procedure - layout, art work, etc.
4. Evaluation of the effectiveness of ads (counts, reactions, etc.)

F. Customer Relations.

1. Approach and greet customers
2. Present and show merchandise
3. Meet objections and close sales
4. Trade-up and suggestion selling
5. Handle mail and telephone orders
6. Handle adjustments and exchanges

G. Unit Control System.

1. Familiarity with classifications and method of classifying
2. Figure stockturn of a given line
3. Keep a perpetual inventory record for a given line (or periodic count)

H. Buying and Merchandising

1. Determining what to reorder
2. Interpreting consumer preferences
3. Figuring mark-up
4. Procedure and use of special orders
5. Want slip
6. Comparison shopping

I. Expense Control.

1. Know own selling cost and significance
2. Conserve supplies
3. Prevent shortages (cash register tapes, merchandise care)
4. Determining causes for returned goods

J. Supervisory.

1. Break in another new employee
2. Manage a counter

EXHIBIT A.1 (Continued)

K. Merchandise Information.

1. Learn location of the stock
2. Merchandise facts related to customer benefits
3. Fashion cycles for merchandise carried
4. Alterations and repairs
5. Care

EXHIBIT A.1 (Continued)

PROFILE CHECK SHEET - GROCERY STORE

For the following statements, circle the appropriate number that precedes.

Circle 1 if you have had No Training.
Circle 2 if you have had Very Little Training.
Circle 3 if you have had Adequate Training.
Circle 4 if you have had a Great Amount of Training.

I. General

1 2 3 4 1. An understanding of store policy and store regulations.
1 2 3 4 2. An opportunity to discuss job ratings.
1 2 3 4 3. Have studied merchandise and grocery trade magazines and information.
1 2 3 4 4. Assist in taking inventory.
1 2 3 4 5. Able to direct customers to various store areas.
1 2 3 4 6. Take part in extra-store activities and meetings.
1 2 3 4 7. Group or other type insurance plan has been explained.
1 2 3 4 8. Have an understanding of Withholding and Social Security regulations, etc.

II. Receiving

1 2 3 4 1. Understand from where and how products are shipped.
1 2 3 4 2. Help in the unloading of received goods.
1 2 3 4 3. Opportunity to check invoice or count received goods.
1 2 3 4 4. Movement of goods from door through receiving room to the selling floor.
1 2 3 4 5. Arrangement of stock on shelves.

III. Stocking

1 2 3 4 1. The objectives of stockkeeping.
1 2 3 4 2. How stock is replenished when an item is out.
1 2 3 4 3. Handling of stock rotation and stock arrangement.
1 2 3 4 4. Safety precautions in stocking.
1 2 3 4 5. Use of safety tools.
1 2 3 4 6. When stockkeeping is done.

IV. Pricing

1 2 3 4 1. Responsibility for pricing of received goods.
1 2 3 4 2. How goods are priced. Shelf price. Invoice. How to arrive at markup price.
1 2 3 4 3. The handling of price changes.

EXHIBIT A.2

1 2 3 4 4. The authority for price changes.
1 2 3 4 5. Tools or tags, etc. used for various pricing situations.

V. Store Maintenance

1 2 3 4 1. Realize the many areas of store maintenance.
1 2 3 4 2. Dusting and cleaning of shelves and merchandise.
1 2 3 4 3. Cleaning of store windows and cash register area.
1 2 3 4 4. Cleaning of dairy and produce cooler cases.
1 2 3 4 5. Keep displays and promotion merchandise clean and neat.
1 2 3 4 6. Procedure for handling broken, spoiled or unattractive merchandise.

VI. Check Stands

1 2 3 4 1. Cash register operation.
1 2 3 4 2. Cash register check-out.
1 2 3 4 3. Register daily tally.
1 2 3 4 4. Change making.
1 2 3 4 5. Customer relations and store courtesy.
1 2 3 4 6. Sacking of merchandise--packaging economy.
1 2 3 4 7. Carry-outs.
1 2 3 4 8. Taking orders by phone.
1 2 3 4 9. Suggestive selling.
1 2 3 4 10. Procedure for charge sales.
1 2 3 4 11. Understand sales tax data.
1 2 3 4 12. Replenish sacks and wrapping materials.
1 2 3 4 13. Handling customer complaints.
1 2 3 4 14. Calling prices and procedure for ringing up sales.

VII. Advertising and Promotion

1 2 3 4 1. An understanding of store promotions.
1 2 3 4 2. How promotions are handled in the store.
1 2 3 4 3. What store duties arise in relation to promotions.
1 2 3 4 4. What media is used for your advertising.
1 2 3 4 5. Responsibility of clerks in relation to promotion and advertising.
1 2 3 4 6. Opportunity to take part in planning or discussing store ads and promotions.
1 2 3 4 7. Making show and display cards.
1 2 3 4 8. Building mass displays.
1 2 3 4 9. Suggesting tie-in sales and special promotion ideas.

VIII. Buying

1 2 3 4 1. Ordering of goods to replenish stock.

EXHIBIT A.2 (Continued)

1 2 3 4 2. Where and how orders are filled and processed.
1 2 3 4 3. Opportunity to order or handle want slips or reminder slips, etc.
1 2 3 4 4. Buying problems of time, quantity, quality and price explained to you.
1 2 3 4 5. Inform buyer or manager of "outs" or fast selling items and reporting customer comments and reactions.

IX. Products

1 2 3 4 1. Knowledge of produce handling.
1 2 3 4 2. Knowledge of trimming and preservation of perishables.
1 2 3 4 3. Display of produce.
1 2 3 4 4. Ordering of produce.
1 2 3 4 5. Knowledge of seasonal produce promotions and activity.
1 2 3 4 6. Procedure for handling pre-wrapped produce.
1 2 3 4 7. Marking and wrapping of fresh produce.
1 2 3 4 8. Handling of produce spoilage and prevention methods.

X. Store Organization and Operation

1 2 3 4 1. Know "chain of command" in store.
1 2 3 4 2. Understand promotion policy and opportuntiy to discuss job rating.
1 2 3 4 3. Understand and discuss potential job opportunity.
a. Locally
1 2 3 4 b. Nationally

XI. Comments ---Please enter here or on the reverse side any comments or suggestions you might have concerning the validity of the various areas. You may wish to pencil in or scratch out parts of other questions above. Thank you.

PROFILE CHECK SHEET - NURSERY & FLORIST SHOP

For the following statements, circle the appropriate number that precedes.

Circle 1 if you have had No Training
2 if you have had Very Little Training
3 if you have had Adequate Training
4 if you have had a Great Amount of Training
5 if the statement does not apply to your training station

Nursery:

I. General

1 2 3 4 5 1. An understanding of policy and regulations.
1 2 3 4 5 2. An opportunity to discuss job ratings.
1 2 3 4 5 3. Have discussed opportunities for promotion.
1 2 3 4 5 4. Introduced to employer and other employees.
1 2 3 4 5 5. Have an understanding of Withholding & Social Security regulations, etc.
1 2 3 4 5 6. Group or other type insurance plan has been explained.
1 2 3 4 5 7. Have studied trade magazines and information.
1 2 3 4 5 8. Able to direct customers to various plot areas.

II. Care of Plants

1 2 3 4 5 1. Knowledge and use of tools and where to store them.
1 2 3 4 5 2. Understand watering schedule.
1 2 3 4 5 3. Understand procedure for watering plants.
1 2 3 4 5 4. Understand procedure for irrigating plants.
1 2 3 4 5 5. Understand procedure for fertilizing plants.
1 2 3 4 5 6. Understand procedure for trimming plants.
1 2 3 4 5 7. Understand procedure for covering plants.
1 2 3 4 5 8. Understand procedure for propagating plants.
1 2 3 4 5 9. Understand transplanting techniques.
1 2 3 4 5 10. Understand sun and light control.
1 2 3 4 5 11. Understand how to replace in selling area plants that have been sold.
1 2 3 4 5 12. Understand where to put price tag.
1 2 3 4 5 13. Understand where to put name tag.
1 2 3 4 5 14. Understand can cutting procedure.
1 2 3 4 5 15. Understand method for wrapping plants.
1 2 3 4 5 16. Knowledge of plant display.

EXHIBIT A.3

III. Technical Plant Knowledge

1 2 3 4 5 1. Plant identification.
1 2 3 4 5 2. Plant propagation.
1 2 3 4 5 3. Plant use.
1 2 3 4 5 4. Forcing plants.
1 2 3 4 5 5. Chemical make-up of soil.
1 2 3 4 5 6. Controlling chemical make-up of soil.
1 2 3 4 5 7. Greenhouse management.
1 2 3 4 5 8. Landscape design.
1 2 3 4 5 9. Mechanical skills.

IV. Nursery Operation

1 2 3 4 5 1. Understand "Chain of Command" in store.
1 2 3 4 5 2. Knowledge of promotion policy.
1 2 3 4 5 3. Knowledge of location of sources and buying procedures if plants are purchased from other sources.
1 2 3 4 5 4. Understand policy for referring customers to other nurseries.
1 2 3 4 5 5. Understand policy for handling complaints.

V. Sales

1 2 3 4 5 1. How to approach customer.
1 2 3 4 5 2. How to show plants.
1 2 3 4 5 3. Answering questions.
1 2 3 4 5 4. Advising customer on plant care.
1 2 3 4 5 5. Techniques for closing sale.
1 2 3 4 5 6. Cash register operation.
1 2 3 4 5 7. Keeping sales record.
1 2 3 4 5 8. Making change.
1 2 3 4 5 9. Handling charge accounts and C.O.D., if any.
1 2 3 4 5 10. Handling difficult customers.
1 2 3 4 5 11. Taking orders by telephone.
1 2 3 4 5 12. Giving information by telephone.

VI. Other

1 2 3 4 5 1. _____

1 2 3 4 5 2. _____

1 2 3 4 5 4. _____

EXHIBIT A.3 (Continued)

Florist Shop:

I. General

1 2 3 4 5	1.	Assist in taking inventory.
1 2 3 4 5	2.	Able to advise customer in selection of flowers.
1 2 3 4 5	3.	Knowledge of credit policy.
1 2 3 4 5	4.	General Maintenance and watering of plants.
1 2 3 4 5	5.	Knowledge of floral design.
1 2 3 4 5	6.	Knowledge of wholesale prices and policies.
1 2 3 4 5	7.	Acquaintance with regular customers. (Funeral homes, churches, etc.)

II. Buying for Resale

1 2 3 4 5	1.	Knowledge of how wholesalers work with retailers.
1 2 3 4 5	2.	Knowledge of wholesale discounts.
1 2 3 4 5	3.	Knowledge of supplier locations.
1 2 3 4 5	4.	Knowledge of ordering and buying flowers.
1 2 3 4 5	5.	Knowledge of the different flower prices.
1 2 3 4 5	6.	Able to recognize flower quality.

III. Selling and suggestion making

1 2 3 4 5	1.	How to approach a customer.
1 2 3 4 5	2.	Ability to suggest flowers suitable for different social occasions.
1 2 3 4 5	3.	Knowledge of color arrangements.
1 2 3 4 5	4.	Knowledge of prices for all floral arrangements.
1 2 3 4 5	5.	How to write up the order.
1 2 3 4 5	6.	Ability to take phone orders.
1 2 3 4 5	7.	Keeping sales records.
1 2 3 4 5	8.	Ability to close sale.
1 2 3 4 5	9.	Knowing how to send flowers by Western Union.

IV. Delivery

1 2 3 4 5	1.	Customer locations.
1 2 3 4 5	2.	How to sell while delivering.
1 2 3 4 5	3.	Care of flowers while delivering.
1 2 3 4 5	4.	What to do when truck breaks down.
1 2 3 4 5	5.	Use of street directories.
1 2 3 4 5	6.	How to handle customer complaints.
1 2 3 4 5	7.	How to keep the customer sold.
1 2 3 4 5	8.	What to do when merchandise delivered is damaged.
1 2 3 4 5	9.	How to handle COD orders.

PROFILE CHECK SHEET - GASOLINE SERVICE STATION

For the following statements, circle the appropriate number that precedes.

Circle 1 if you have had No training.
2 if you have had VERY LITTLE training.
3 if you have had ADEQUATE training.
4 if you have had a GREAT AMOUNT of training.

I. GENERAL

1 2 3 4 1. An understanding of Social Security and withholding tax regulations, etc.
1 2 3 4 2. An understanding of station regulations pertaining to smoking, coffee breaks, tardiness, absence, etc.
1 2 3 4 3. Promotion and advancement opportunities in your station have been explained.
1 2 3 4 4. Have opportunities to discuss job rating with the manager or operator.

II. PROMOTION

1 2 3 4 1. Realize the importance of available display area.
1 2 3 4 2. Have opportunity to suggest display items.
1 2 3 4 3. Have opportunity to set up displays by using own ideas.
1 2 3 4 4. Have compared other station displays and found display information in trade magazines and papers.
1 2 3 4 5. Have used or set up display materials sent by the national organization.
1 2 3 4 6. Know the various advertising media used by your station and take the responsibility to see or hear these ads.
1 2 3 4 7. Have opportunity to make suggestions in relation to specials and media use.
1 2 3 4 8. Have discussed allocation of advertising funds or budget.

III. SELLING ACCESSORIES

1 2 3 4 1. Have taken it upon yourself to look up and understand the selling features of accessories.
1 2 3 4 2. Understand which accessory will do what type of job.
1 2 3 4 3. Suggest to owner other accessories that might be needed or that customers ask for.
1 2 3 4 4. Using suggestive selling in relation to accessories.
1 2 3 4 5. Understand the procedure for replenishing accessory stocks.

EXHIBIT A.4

IV. DRIVEWAY SERVICE

1 2 3 4 1. Realize how gas and oil are received and shipped to your station.
1 2 3 4 2. Understand importance of fast and cheerful customer service.
1 2 3 4 3. Know proper manner and approach to customers and employ the use of "extra" services to insure customer satisfaction.
1 2 3 4 4. Understand the different grades, types and weights of oil.
1 2 3 4 5. Understand the costs and taxes involved in the price of gasoline.
1 2 3 4 6. Call attention to services the customer might need such as anti-freeze, lubrication, tire rotation, etc.
1 2 3 4 7. Understand cash register operation and change making.
1 2 3 4 8. Understand the station policy concerning checks, charge sales and credit cards.

V. LUBRICATION

1 2 3 4 1. Use of auto hoist.
1 2 3 4 2. Use of safety measures or devices.
1 2 3 4 3. Use of proper tools.
1 2 3 4 4. Clean tools after use--return to proper place.
1 2 3 4 5. Able to locate all grease fittings for moving parts of auto.
1 2 3 4 6. Understand transmission and differential check.
1 2 3 4 7. Routine check of areas that may be in need of major repair such as tie-rod ends, universal joints, grease seals, fluid leakage, etc.
1 2 3 4 8. Know what parts or areas under the hood that must be checked or serviced.
1 2 3 4 9. Understand the steps in changing oil and replacing filter.

VI. WASHING AND POLISHING

1 2 3 4 1. Understand and able to follow step by step operation for washing and polishing of cars.

VII. TIRE REPAIR

1 2 3 4 1. Know special repair tools and materials used for tubeless tires.
1 2 3 4 2. Use of the tire stand and tools.
1 2 3 4 3. Repair of tubes and damaged casings.
1 2 3 4 4. Figure allowance on trade-in tires.

EXHIBIT A.4 (Continued)

VIII. MINOR REPAIR AND SERVICE

1 2 3 4 1. Install wiper blades or repair wipers.
1 2 3 4 2. Install fuses, radio antenna, rear-view mirrors, headlights, etc.
1 2 3 4 3. Check brake fluid, repair emergency brake.
1 2 3 4 4. Wheel rotation.
1 2 3 4 5. Installing or replacement of battery cables, spark plugs, coil, condenser, points, fanbelt, radiator hose, shock absorbers, etc.
1 2 3 4 6. Knowledge and use of correct tools.

IX. STATION MAINTENANCE

1 2 3 4 1. Have responsibility for neatness and cleanliness of windows, shelves, floor, workbench and tools, etc.
1 2 3 4 2. Help to keep restrooms and storage areas neat and clean.
1 2 3 4 3. Responsibility for neatness of the outside station area including driveway, lawn, parking area, etc.

X. RECEIVING AND RECORD KEEPING

1 2 3 4 1. Know how to fill out and record credit cards.
1 2 3 4 2. Record charge sales.
1 2 3 4 3. Know method of receiving cash sales.
1 2 3 4 4. Understand procedure for recording AAA or special service calls.
1 2 3 4 5. Know how to record pump totals at end of day.
1 2 3 4 6. Record work done on various jobs or cars (service performed and charges.)
1 2 3 4 7. Handle some phase of weekly book or record keeping.

Comments--Please enter here or on the reverse side any comments and suggestions you might have concerning the validity of the various areas and questions. You may wish to pencil in or scratch out parts of other questions above.

PROFILE CHECK SHEET - WHOLESALE AUTOMOTIVE SUPPLY STORE

For the following statements, circle the appropriate number that precedes.

Circle 1 if you have had NO training.
2 if you have had Very Little training.
3 if you have had Adequate training.
4 if you have had a Great Amount of training.

I. GENERAL

1 2 3 4 1. An understanding of history and organization of the company.
1 2 3 4 2. An understanding of store policy and regulations.
1 2 3 4 3. Group insurance plan has been explained.
1 2 3 4 4. Have understanding of payroll deductions, including withholding tax and social security.

II. RECEIVING

1 2 3 4 1. Understand from where and how merchandise is shipped.
1 2 3 4 2. Opportunity to check packing lists and merchandise received.
1 2 3 4 3. Moving merchandise from receiving department to shelves.

III. STOCKING

1 2 3 4 1. Arranging stock on shelves in proper place.
1 2 3 4 2. How stock is replaced when an item is out.
1 2 3 4 3. Rotation of stock to keep fresh items in front.
1 2 3 4 4. When to stock items individually or by the case.
1 2 3 4 5. When stockkeeping is done.

IV. STORE MAINTENANCE

1 2 3 4 1. Dusting and cleaing shelves and merchandise.
1 2 3 4 2. Cleaning show windows.
1 2 3 4 3. Keeping floor area clean and neat.
1 2 3 4 4. Keeping displays clean and neat.

V. CATALOGUES

1 2 3 4 1. How to use index to find merchandise information.
1 2 3 4 2. How to locate make, model and item number.
1 2 3 4 3. Knowledge of brands of merchandise in catalogues and in stock.

EXHIBIT A.5

1 2 3 4 4. How to find prices in the catalogue.
1 2 3 4 5. Learn discount structure of prices.
1 2 3 4 6. Understanding of card system to locate stock.

VI. SELLING

1 2 3 4 1. Learn selling points of merchandise.
1 2 3 4 2. Learn other items to suggest when selling.
1 2 3 4 3. Learn types of automotive equipment sold.
1 2 3 4 4. Knowledge of types of customers served.
1 2 3 4 5. Handling merchandise returns and defective goods.
1 2 3 4 6. Knowledge of way special promotions are handled.

VII. BUYING

1 2 3 4 1. Methods of ordering to replace merchandise.
1 2 3 4 2. Methods of handling special orders.
1 2 3 4 3. Buying seasonal merchandise.
1 2 3 4 4. Returning merchandise to suppliers.
1 2 3 4 5. Understanding of card system in purchasing.

VIII. DELIVERY AND SHIPPING

1 2 3 4 1. Filling orders for delivery.
1 2 3 4 2. Knowledge of rules for driving delivery truck.
1 2 3 4 3. Checking orders before delivery and when delivery is made.
1 2 3 4 4. Courtesy to customers when on delivery.
1 2 3 4 5. Knowledge of handling orders for goods when making deliveries.
1 2 3 4 6. Knowledge of methods for shipping out of town orders.
1 2 3 4 7. How to properly package orders for shipping.

IX. CASH AND CHARGE INVOICES

1 2 3 4 1. How to write and register cash invoices.
1 2 3 4 2. Knowledge of writing charge invoices.
1 2 3 4 3. How to learn which are charge customers and which are cash customers.
1 2 3 4 4. Knowledge of figuring cash discount.
1 2 3 4 5. Knowledge of operating cash register.
1 2 3 4 6. How to write returned goods slips.

X. OPPORTUNITIES FOR THE FUTURE

1 2 3 4 1. Knowledge of promotion policy.

EXHIBIT A.5 (Continued)

1 2 3 4 2. Opportunity to discuss job ratings with manager.
1 2 3 4 3. Understand and discuss potential job opportunities with the company and industry.

EXHIBIT A.5 (Continued)

FACTORS INFLUENCING ENROLLMENT IN DISTRIBUTIVE EDUCATION PROGRAMS IN IOWA

The following is a summary of the thesis which was completed at Iowa State Teachers College (1957) from the questionnaires which distributive education students answered in 1955. The study was limited to Iowa high school students enrolled in distributive education programs in the spring and fall of 1955. The questionnaire inquiry method was used because a reponse was desired from each of the 515 students enrolled in the fifteen Iowa high schools. Returns were received from 435 students, which gave 84.5% returned.

DISTRIBUTION OF STUDENTS INDICATING REASONS WHICH INFLUENCED ENROLLMENT IN DISTRIBUTIVE EDUCATION IN IOWA, 1955

Reasons	Number	Per Cent
Wanted the work experience the distributive education program offered.	338	77.7
Wanted to earn some extra money.	252	57.9
Thought it would be easier to get a job after graduation.	249	57.2
Was interested in learning about the different phases of business.	241	55.4
Felt that time spent in distributive education program would be more useful than time spent in regular classes.	192	44.1
Thought I would be able to get a better salary after graduation.	135	31.0
Wanted school credit for job which I had.	88	20.2
Thought distributive education offered only worthwhile work which I could do.	72	16.6
Needed to earn money to remain in school.	65	14.9
Thought it would be an easy course.	48	11.0

EXHIBIT A.6

	Number	Per Cent
Did not do very well in other courses.	36	8.3

PARTICIPATING PROJECTS PLAN

Student:_____ School:_____

School Year: 19___ - 19___ Semester:_____

The above-named student has chosen to train for a career in the field of _____.

This project plan briefly describes the occupational participating activities, group and individual, necessary for the preparation toward employment in the occupation of _____.

The activities outlined below are to be agreed upon by the student and teacher-coordinator as achievement levels necessary to the acquisition of his (her) occupational goal.

PROJECTS SCHEDULE						
Entry Date	Activity	Goal	Indi-vidual	Group	Due Date	Com-pletion Date

_____ _____

(Teacher-Coordinator) (Student)

EXHIBIT A.7

WHY COOPERATIVE STUDENTS SHOULD BE PAID FOR WORK IN PRIVATE EMPLOYMENT*

The question of paying cooperative students may not seem to be an issue to many readers. However, we find that some educators have not become accustomed to the idea of allowing both pay and credit for work done in the store, office and shop. The question was warmly debated during the early years of the cooperative program and during the depression years of the thirties when placement was rather difficult. Very likely it will again assume some importance when the employment situation is not as favorable to the worker as it is now. Each time the problem arises the proponents of paying students emerges victorious.

The U. S. Office of Education urges the policy of paying students for the work they do on the job. This does not make the practice a wise one, but it offers a testimonial from an organization which has been closely connected with the program and its problems for many years.

General educators will see the value of teaching and management and use of money and the appreciation of the value of a dollar earned. Coordinators will soon realize that payment is necessary to the sound operation of the program. We hope that the points listed below will aid both in their thinking on the subject.

The amount of wages to be paid is not our concern at this point. That is an issue by itself and an interesting one.

It is our belief that students should be paid. There are some plausible arguments against the idea which we feel are outweighed by those listed below. The reader may wish to talk to coordinators in service to study their reactions to this problem. Such activity is encouraged.

IMPROVES EDUCATIONAL VALUES

1. It teaches the value of a dollar earned.

2. It facilitates the teaching of money management and wise spending.

3. It dignifies the job and work in the mind of the student.

4. The student feels a greater responsibility for his work if he is paid for what he does. (Facilitates the learning of responsibility)

---

*University of Minnesota, Distributive Education, Warren G. Meyer, Ed. C. I. 139)

EXHIBIT A.8

5. The money earned gives the student a feeling of partial independence from parental support and confidence in his ability to be self supporting in the future.

6. It provides an incentive for improvement through better service and study. (Raises in wages)

7. It measures the students progress.

8. It results in greater interest in the student on the part of the employer.

IMPROVES RELATIONSHIP WITH BUSINESS ORGANIZATIONS

9. It provides a genuine normal relationship between the employer and the trainee causing him to expect the same of the student as he demands of other workers.

10. It reduces the possibility of exploitation of the student by the employer.

11. It satisfies the employees who often object to competition from those who work without pay.

PROTECTS THE SCHOOL

12. Satisfies the conditions for insurance.

AIDS THE STUDENT FINANCIALLY

13. Aids in the financial support of needy students.

14. It starts the student on the social security program.

EXHIBIT A.8 (Continued)

ADVISORY COMMITTEE*

The Purpose, Responsibilities, and Organization of School Advisory Committees

An Advisory Committee is a group of representative persons of the occupational area organized under proper school authority to advise educators regarding the need, development and operations of a given vocational technical program. Its role is advisory to the school board, who has the policymaking responsibility. Functionally, the committee shall work with the several co-ordinators and the Director of Vocational-Technical Education.

The purpose of the committee is:

1. To identify the needs of the business community and make recommendations as to how these needs can best be met. This shall include advice on course content and teaching methods.

2. To thoroughly be acquainted with the program, so that valuable advice and assistance can be offered at the high school as well as the adult level.

3. To help publicize the program.

4. To help locate and select proper training stations.

5. To aid in the evaluation of the program in relation to the trends and innovations in the field.

6. To advise on the selection of students for the program.

7. To advise on room layout and equipment needs.

8. To be available to the individual teachers as a consultant when needed for advise and counsel.

The effective operation of the Advisory Committee is dependent upon the regular attendance of the members. A minimum of three meetings a year would be deemed necessary for the Committee of the Whole. Sub-committees may meet more frequently.

Each representative shall head a sub-committee with the exception of the chairman. A co-ordinator shall be assigned direct responsibilities in working with at least one sub-committee. All reports of the sub-

---

*Developed by the Phoenix Union High School System - Distributive Education.

EXHIBIT A.9

committee shall be made to the Advisory Committee by the representatives, not the co-ordinators. Sub-committees are tentative. The following are examples:

Youth Program	Course of Study
Student Follow-up	Facilities and Equipment
Adult Education	Special Co-op Programs
Publicity	Chairman-Secretary
Business Community Needs	Employee-Employer Banquet
	Committees-Co-ordinator Trends and Developments

Guidelines for Selection of Business Representatives

1. Goal: 15 Members

   Minimum 12 -- Maximum 18

2. Selection Criteria

   a. Types of business represented
   b. Geographic location
   c. Specific interests (Alumni, Management, Training Sponsor, Parent)

3. Basis for Selection of Members--Personal Qualifications.

   A representative should be selected when he or she shows:

   a. Intelligence, social vision and leadership experience.
   b. Interest and willingness to work in the promotion of the program.
   c. Good character and integrity.
   d. Civic mindedness and an unselfish spirit.
   e. Courage to express their ideas and defend their convictions.
   f. Experience in the occupation represented, if appropriate.
   g. Adequate time.

4. Coordinators shall draft a list of 30-50 potential members for consideration by the group. The final recommendations shall be submitted to the Director of Vocational-Technical Education and the Superintendent of Schools.

5. Committee members are by direct invitation only by the Superintendent of Schools.

EXHIBIT A.9 (Continued)

6. A planned 3-year rotation system shall be utilized. No person shall serve more than a 3-year period without a one-year break. Initially, one-third of the committee shall be selected for a one-year term, one-third for a 2-year term and one-third for a 3-year term.

7. The chairman shall be a businessman elected by the business representatives.

8. The school administrative representative and teachers shall be ex-officio members only. They shall attend the meeting to receive advice, not to give it.

9. Each business representative shall head a sub-committee. All reports shall be made to the Advisory Committee by the business representatives, not the coordinators.

Coordinator Responsibility in Advisory Committee

1. The Coordinators shall be ex-officio members of the Advisory Committee.

2. Coordinators shall not vote for the chairman of the committee.

3. Each coordinator shall work on at least one sub-committee with the exception of the secretary, who will work with the chairman.

4. Coordinators shall host the meetings; a host and hostess being appointed by the secretary for each meeting.

5. Contact shall be made by the coordinator to his assigned sub-committee chairman within a 24-hour period to confirm attendance at the meeting.

6. After the meeting, a definite plan of follow-up on reports and action needed shall be the responsibility of each sub-committee--business representative as well as educator.

7. Coordinators shall elect a secretary whose duties shall be:

   a. To act as secretary, recording the minutes of the meetings.
   b. To help in planning the agenda with the chairman. Beginning and ending time of the meeting shall be stated on the agenda.
   c. To distribute the written minutes immediately following a meeting.
   d. To call on sub-committee business chairmen as consultants.
   e. To assign social responsibilities connected with an Advisory meeting.

EXHIBIT A.9 (Continued)

f. To see that business members are alerted by written invitation to the meeting.

8. All invitations and confirmations of the Advisory Committee members shall be handled by the Director of Vocational-Technical Education and the Superintendent of Schools.

9. The secretary (coordinator) shall provide the Director of Vocational-Technical Education's office with all pertinent data.

10. Regular attendance is essential. When attendance is not possible, the coordinator shall contact the secretary.

11. Coordinators shall seek advice of the several business representatives.

12. A teacher-coordinator shall advise committee members of the trends and developments in the field, as it relates to the needs and developments of the program.

PROGRESS REPORT*

Date _____

Progress Report of _____ in _____
(student) (training agency)

Directions: Read over each line carefully. Place a check mark over phrase which describes the student most accurately.

1. _____

Makes an excellent appearance.	Usually neat and appropriate.	Sometimes neglects appearance.	Should improve appearance.

2. _____

Personality is outstanding.	Pleasing personality.	Personality is unimpressive.	Does not get along well with others.

3. _____

Unusually enthusiastic about work.	Shows interest in work most of time.	Interested only in certain phases of job.	Should show more interest in work.

4. _____

Goes out of way to cooperate.	Is usually cooperative.	Helps only when asked.	Does not work well with others.

5. _____

Reliable in following directions.	Usually follows directions well.	Sometimes careless in following directions.	Cannot always be relied upon to follow directions.

6. _____

Recognizes work to be done and does it.	Sometimes goes ahead in work not assigned.	Performs regular routine duties only.	Seldom seek work beyond regular duties.

---

*Developed by Distributive Education, Kent County Vocational-Technical Center, Woodside, Delaware.

EXHIBIT A.12

7. Wise in action and in making decisions.	Usually shows sound judgment.	Sometimes shows lack of judgment or discretion.	Lacks ability to make sound decisions.
8. Has perfect attendance.	Occasionally absent with good excuse.	Occasionally absent without good excuse.	Frequently absent.
9. Always on time.	Occasionally late but with good excuse.	Occasionally late without good excuse.	Frequently late.
10. Is outstanding in production.	Exceeds average production.	Is average in production.	Should produce better.

SELECTION OF TRAINING STATIONS*

1. Is the employer sincerely interested in Work-Study training?

2. Do the employer and his employees have a sincere interest in providing on-the-job laboratory experience for trainees?

3. Are the objectives of the local plan understood and accepted by the employer?

4. Is the employer willing and able to provide employment for the student during the entire school year?

5. Are standards such that they will supply a minimum of hours of profitable training?

6. Does the business under consideration have the equipment and the type of work adequate to provide all-around training?

7. Will the trainee be trained under desirable working conditions?

8. Are modern methods incorporated in the program?

9. Are those who are to be assigned as sponsors competent and outstanding?

10. Will all the trainees on-the-job experience be supervised by a competent person?

11. What is the reputation of the employer with the community?

12. Is the employer's reputation good with other employers?

13. Are the employer's relationships with labor satisfactory?

14. Does the employer carefully select his employees?

15. Will the trainee be subject to hazards affecting health, morale or work?

16. Are the wages comparable to the wages paid for similar occupations in the community?

---

*Taken from DISTRIBUTIVE EDUCATION MANUAL, State of Illinois Board for Vocational Education.

EXHIBIT A. 14

17. Do the employer and his employees recognize the value of technical training in various distributive occupations?

18. Is the business establishment conveniently located, with respect to the student, the school and for coordination activities?

EXHIBIT A. 14 (Continued)

SPONSOR'S RESPONSIBILITIES

The training sponsor is the individual to whom the student looks for instruction and training on the job. He may be the owner or manager, or he may be a responsible individual appointed by management. Any student may have one or more training sponsors during the course of his enrollment in the program, depending upon the nature of progressive experiences provided and the size of the enterprise in which the student is employed.

The training sponsor must understand the cooperative occupational education program. He should know the career objective currently held by the student under his supervision and appreciate the significance of satisfactory job performance by the student. The teacher-coordinator must recognize his responsibility to help sponsors appreciate the significance of satisfactory job performance by the student and to appreciate their unique assignment to share in the education of youth.

The purpose of on-the-job training is to apply basic knowledge in a job situation, to receive instruction and gain experience in an occupational field. The student thereby experiences the realities of business activity paralleling the classroom instruction. In this sense, the employing agency becomes, for the student, a laboratory situation. Job performance should be treated as the necessary step in a series of experiences which contribute to the career objective held by the student.

The importance of the job, however, must not be minimized; for it is from the environment of the training station that the student will emerge as an experienced worker. The influences of this environment will

EXHIBIT A.15

dictate to a great extent the manner in which he will think and perform as he approaches full-time employment.

Because the present job is of vital importance to the student's total career, certain measures must be taken to insure that experience on the job will be educationally sound. Above all, the student must be placed, as far as it is possible, in a training situation in keeping with his career objective. One method used to assure that instruction will take place on the job is to incorporate a training plan as one of the operating procedures of the cooperative program.

Such an agreement may be prepared jointly by the employer and the teacher-coordinator. Therein, a definite plan of progressive experiences and learning activities, usually referred to as a schedule of experiences, are planned for the student.

EXHIBIT A.15 (Continued)

WORKSHOP-CONFERENCE EVALUATION FORM

To help plan future workshop-conferences, please answer the following questions. Be frank in your answers and add useful comments.

1. How many programs of this type have you attended before today? 25 - 0; 2 - 10 or more; 2 - 1; 1 - 5.

2. In order of preference (1, 2, 3) do you think a program of this type should be:
   Inspirational 14, Discussional 4, Instructional 12.

   Comments: "I have listed inspirational first because I have never seen any program, educational or other wise, so effectively sold".

3. This workshop-conference covered the material desired:
   Clearly 27, Vaguely 3, Not at all ____.

   Comments: "The value and methods of implementation of improved vocational-education methods appeared obvious to all".

4. Was the time of meeting convenient for you? Yes 30 No ____.
   Preferable time (if any) eliminate the evening session on the last day.

5. Would you include this type of program in the future?
   Yes 30 No ____.

6. Time spent on instruction was:
   Enough 27, Too much 1, Not enough 2.

7. Time spent on discussion was:
   Enough 27, Too much 1, Not enough 2.

8. This workshop-conference gave you how much new information and/or ideas?
   Some 6, Many 24, Few ____.

   Comments: "A veritable fountain".
   "I now see the possibility of some type of cooperative program in my area".

EXHIBIT A.16

9. How would you describe this workshop-conference?
Challenging 27 , Interesting 3 , Boring ____.

Comments: "I know it will help me do a better job, with better understanding".

10. What workshop-conferences would you like to attend in the future? List topics if possible.
Vocational Education - Present and Future.
Specific Fields (Trades and Industry - Home Economics - Office Occupations - Agriculture - Distributive).
Programed Instruction and the Project Method.
Youth Activity Programs for Vocational-Technical Students.

Comments: "A workshop-conference similar to this one would seem appropriate....involve more vocational-education personnel in this professional approach to the future of their programs....".

11. Did you change any of your previous ideas about the purpose of vocational education?
Somewhat 19 , Quite a bit 7 , Not at all 4 .

Comments: "The conference reinforced my personal feeling about the dire need for more and improved vocational education programs".

"I found that many of my problems are shared by all educators in vocational education".

"I already knew the value, however, this really reinforced my ideas".

"My ideas concerning the purpose of vocational education haven't changed - My ideas concerning application have".

12. Did you change any of your previous ideas about the purpose or operation of cooperative occupational education programs?
Somewhat 5 , Quite a bit 22 , Not at all 3 .

Comments: "Reinforcement again, I am, I feel, able to do a better job...quite an accomplishment considering this was done in only one week."

EXHIBIT A. 16 (Continued)

"I now feel it is one of the greatest methods used in education".

"It offers endless possibilities at all levels and for all areas of vocational-education.

13. What suggestions do you have (about techniques, materials, content, and so on) for improving future workshop-conferences?

Comments: "Techniques, materials and content were excellent".

"More individuals from the various fields of vocational education should be exposed to this type of workshop-conference".

"Future workshop-conferences for each specific area of vocational education. Also, programed instruction, project method and youth programs".

14. Indicate which day you thought most enlightening, educational and helpful.

Comments: "The two days when the organization and operation of cooperative programs and their obvious advantages where explained in the most comprehensive and inspiring sessions I have ever had the privilege to attend."

"Everyday was enlightening, educational and helpful. It was a most gratifying experience to hear many outstanding individuals from the fields of public relations, education, business, industry and labor."

15. Please use remaining space for any additional comments.

Comments: "You can rest assured that "all concerned" will get a thank you note for this conference. One or two things puzzled me in the beginning but keeping in mind "change" I am most grateful for having been chosen to attend".

"This was just one of the best conferences I've ever attended. I could think of so many other people I'd have liked to see here. Those of us who were here have much to take back to our co-workers for their inspiration and help".

"The conference proved successful. At the leadership level. It was evident that much thought and preparation went into the planning stages. Speakers invited to address the gathering were articulate and well versed to discuss and present ideas and

EXHIBIT A. 16 (Continued)

innovations attempted with success in their particular areas. We were too prone to blame school administrators for many of our own shortcomings".

"Please do all that you can to insure a continuation of this type of program".

"The professional setting and atmosphere of the conference, I feel, added a psychological benefit to the overall goal. It seemed to instill a greater awareness of professional pride in the individuals attending. Therefore, they functioned more professionally and truly professional results were achieved. The exposure to the top people available in their field had an exceptionally stimulating effect on me. To draw a comparison, as a "duffer", I have found that I invariably play better golf in a foursome of low 80 - golfers then when I play in a foursome of others in my handicap range equals Inspiration. This conference affected me in the same way. To draw another comparison, I feel I have learned more in one week than in ninety hours of graduate level instruction in this area.

In discussion with conferees who knew practically nothing of the substance of the conference, I have discovered they now have, in my estimation, an amazing grasp of the values and methods of supervised co-operative training, and are enthused about it... an amazing amount of progress in five short days".

Pub Date - Jun65 57p.

*STUDENT ENROLLMENT; *VOCATIONAL EDUCATION; *PROGRAM PLANNING; *PROGRAM EVALUATION; PROGRAM IMPROVEMENT; STATE SURVEYS; TECHNICAL EDUCATION; VOCATIONAL RETRAINING; COOPERATIVE EDUCATION
RHODE ISLAND

This report specifies the programs of occupational education presently offered in the state of Rhode Island and shows the location of those programs as well as the enrollment in each. Some comparisons are also drawn between the numbers enrolled in occupational programs in Rhode Island and numbers enrolled in similar programs in other states. The 1963-64 enrollments in preparatory programs were: (1) agriculture education, 491, (2) home economics education, 2,964, (3) cooperative industrial education, 102, (4) distributive education, 63, (5) cooperative business education, 10, (6) practical nursing, 100, (7) Manpower Development and Training Act Programs, 467, (8) vocational-technical education, 85, and (9) trade and industrial education, 1,715. Some of the conclusions and recommendations were: (1) The preparatory curriculum of the trade and industrial type is limited and needs to be brought into line with modern industrial practices, (2) Preparatory and cooperative distributive education programs should be strengthened and expanded, (3) Home economics programs should place greater attention on preparing pupils for jobs in the food trades, (4) Agricultural curriculums should include preparation for horticultural occupations and more adult education, (5) Business education should expand the cooperative and business machines programs, (6) A program for training technicians at the post-secondary level should be developed, and (7) Greater opportunities in occupational education should be provided for girls and women. This data of the study were used to prepare a subsequent report entitled "Proposed Occupational and Vocational-Technical Education Programs for Rhode Island" (VT 003 525). (MM)

FOREWORD

This report contains two types of information. First, it specifies the programs in occupational education presently offered in the State of Rhode Island. It shows the locations at which programs are conducted and the number of pupils enrolled in each program.

Second, the report in some instances draws comparisons between the numbers enrolled in occupational programs in Rhode Island and the numbers enrolled in similar programs in other states.

The data included are of a purely quantitative nature. As such, however, they provide one dimension for measuring the adequacy of the present program of occupational education in Rhode Island.

This information may be viewed as basic to a subsequent report which will deal with proposed future programs for the State at both the secondary and post-secondary levels.

Data used for Rhode Island have been supplied by the Rhode Island State Department of Education and represent the 1963-1964 school year. Information concerning programs in other states has largely been supplied by the United States Office of Education and represents the school year 1962-1963. In both instances, the figures quoted were the latest available at the time of writing.

I. PRESENT PROGRAMS OF OCCUPATIONAL EDUCATION IN RHODE ISLAND

Occupational education programs in Rhode Island include the following:

1. Day curriculums in agriculture, home economics, practical nursing, technical and industrial fields.

2. Cooperative programs (with students spending half time in paid employment) in business education and the distributive and industrial fields.

3. Evening programs for employed workers in agriculture, home economics, practical nursing, trade and technical subjects, and fire fighting.

4. Related instruction for apprentices as part of the evening programs.

5. Courses for adults operated under the Manpower Development and Training Act in cooperation with the Rhode Island Department of Employment Security.

The succeeding pages deal with the quantitative aspects of these programs in detail.

II. AGRICULTURE EDUCATION

Vocational agriculture is taught in nine high schools with the curriculum usually extending from the ninth through the twelfth grades. Enrollments in the several schools are as follows (1963-1964):

Cranston	49	Ponaganset	61
Chariho	72	Scituate	66
Coventry	82	Warren	22
East Providence	55	Warwick	33
North Kingstown	51	Total	491

In seven of the nine schools which provide agricultural education, the program starts in the ninth grade; in the other two it starts in the tenth grade. The total enrollment distributed by grades is as follows:

9th grade	105
10th grade	152
11th grade	117
12th grade	117

Employment of farmers and farm managers in Rhode Island decreased some 37 per cent between 1950 and 1960, and further decrease is expected in the years ahead. This trend has implications for the number of students who will find employment in agriculture in future years. Technological development in agriculture in the United States has made possible greatly increased production

of food and fiber on an increasingly smaller acreage and with decreasing personnel. Teachers of agriculture in many states whose previous programs have become superfluous are branching out into fields related to agriculture, such as landscape development and greenhouse work. This is a matter for consideration in Rhode Island.

Enrollments in evening classes reported for 1963-1964 by agricultural teachers included 38 students in horticulture and 12 in welding, a total of 50 students from the State. Persons presently working as farmers need to keep abreast of many new developments in agriculture of technical nature. In many states considerable emphasis is placed upon classes for young and adult farmers operated by the agricultural teachers in the schools. The absence of such programs in Rhode Island raises the question as to whether adequate services are being provided for the farmers of the State.

III. HOME ECONOMICS EDUCATION

Vocational home economics, which has been subsidized by federal funds for vocational education under the Smith-Hughes Act since 1917 and the George-Barden Act since 1946, has day programs for high school girls in nineteen schools of the State, with enrollments as follows (1963-1964):

Barrington	99	North Providence	129
Bristol	58	Ponaganset	30
Chariho	78	Scituate	33
Coventry	140	South Kingstown	122
Cumberland	175	Warren	99
East Greenwich	77	Warwick	534
East Providence	489	West Warwick	229
Little Compton	39	Westerly	81
Newport	239	Woonsocket	191
North Kingstown	122	Total	2,964

In most of the schools, the program runs through grades 9 to 12, with enrollment by grades as follows:

9th grade	544
10th grade	980
11th grade	844
12th grade	596

The evening programs in home economics for adults for the school year 1963-1964 reached a total enrollment of 1,296, distributed among the following courses:

Clothing construction	748
Food preparation	141
Home furnishing	37
Millinery	34
Rug making	47
Furniture refinishing	23
Draperies & slipcovers	26
Upholstery	83
Tailoring	157
Total	1,296

Comparative data on enrollments in home economics education programs for selected states and the United States are shown in Table 1.

Home economics in the high schools of the United States is taught in vocational, non-vocational, and combination programs. In the vocational programs, the organized classwork is supplemented by supervised projects in the students' homes. In a nationwide study of nearly 16,000 schools with enrollments of 100 or more students, the data showed 6,206 schools with vocational home economics, 6,822 schools with non-vocational home economics, and 2,695 schools with combination programs.[1]

Vocational home economics, federally subsidized under the Smith-Hughes and George-Barden Acts, has not generally been preparation for specific occupations for which jobs are available. Federal reimbursement for this general type of

[1]Home Economics in the Public Secondary Schools. Office of Education Bulletin OE-83010.

TABLE 1

ENROLLMENT IN VOCATIONAL HOME ECONOMICS CLASSES
BY TYPE OF CLASS IN SELECTED STATES
AND IN THE UNITED STATES
1962 - 1963

	Enrollment		
	Secondary Preparatory	Adult Supplementary	Total
California	53,565	92,164	145,729
Connecticut	4,829	1,403	6,232

Wisconsin	13,286	47,745	61,031
United States	1,164,011	675,439	1,839,450

Source: Vocational and Technical Education. U.S. Office of Education Bulletin OE--80008-63.

program will continue. However, the Vocational Education Act of 1963 provides that ten per cent of the allotment to each state for vocational home economics must be used for training for payroll occupations requiring home economics skills, or be transferred to another allotment.

Non-vocational home economics, that is, preparation for homemaking and family living is needed by all girls and should be considered an important part of general education.

IV. BUSINESS EDUCATION

Until recent years there has been little federal aid for business education. In the Smith-Hughes and subsequent acts, including the George-Barden Act, the only federal subsidy for business and office education was for classes included in cooperative education and general continuation programs. Enrollments in these programs have been insignificant as compared with the numbers of students enrolled in business education curriculums in the high schools financed by local and state funds. The Vocational Education Act of 1963 permits the use of federal funds for all types of occupations below the professional level. Thus business education during the 1964-65 school year takes its place along with the other occupational education programs as eligible for federal subsidy. Federal funds may be used for equipment purchase as well as for operating expenses.

No figures showing enrollment in business education for the United States are available. However, enrollments in business courses in high schools have been large, and this is true for Rhode Island. Data obtained from high schools of the State through personal visits by the consultants during the 1964-65 school year reveal enrollments as shown in Table 2. The figures in this table cannot be considered highly accurate, since

TABLE 2

ENROLLMENT IN BUSINESS EDUCATION COURSES
IN RHODE ISLAND BY SCHOOLS
1963 - 1964

State	Enrollment
Barrington	474
Bristol	155
Central Falls	353

West Warwick	477
Woonsocket	357
Total	20,906

they include a number of students not taking a full business course. They do, however, give a picture of the large size of the business education segment of the high schools.

The business education departments in the high schools often have four rooms given over to typing and business machine operation, and many are equipped with electric as well as manual typewriters.

In the report of vocational education activities for the year 1963-1964, the only business education shown for the State was one part-time cooperative class of ten students in a medical secretary program in Cranston East High School. No data are readily available on enrollments in evening classes in business subjects in the high schools. The information available, however, indicates that the enrollment in such classes is substantial.

In the years ahead, programs in business education, both for day and evening classes, should expand considerably as a result of the availability of federal funds. The programs also should be improved in quality because of new equipment made possible through such subsidy. The new vocational education act breaks down the barriers previously found between different occupational fields. In the years ahead, we may well see programs that cut across these fields, such as agri-business and combinations of industry and business.

The Vocational Division of the State Department of Education must define what constitutes a vocational business education course for purposes of federal reimbursement under the Vocational Education Act of 1963.

V. HEALTH OCCUPATIONS EDUCATION

Occupational preparation for work in the health field in Rhode Island in 1963-1964 was limited to practical nurse training. The pre-employment program in Providence and Warwick had a cumulative enrollment of 100 persons, with 77 graduates. Enrollment in supplementary courses for employed practical nurses number 57, all in Providence. The enrollment of ten persons as medical secretary trainees, noted previously in business education, might also be mentioned here as part of the total health education program.

Enrollments in preparatory programs for health occupations in selected states are shown in Table 3. Rhode Island is a small state, but its enrollment appears very limited as compared with others. One measure used as an indication of the extent to which a state is meeting its educational needs in the health fields is the enrollment in preparatory programs compared with the average number of persons who are in hospitals in the state. Data from Table 3 are shown graphically in Chart 1, which indicates the numbers enrolled in health education programs per thousand persons in the daily hospital census. It is realized that many other factors may contribute to adequacy of hospital care, such as the

TABLE 3

number of professional nurses and hospital aides, but the ratio shown implies too few trainees in Rhode Island. Practical nursing is the major health occupation for which training is provided under the Vocational Education Act, but in other states substanial numbers are also enrolled in reimbursable health occupation programs preparing medical technicians, medical assistants, and dental assistants. In comparison with the average for the nation as a whole and many other states, Rhode Island is far down on the list.

VI. DISTRIBUTIVE OCCUPATIONS EDUCATION

Occupational preparation for sales and other distributive activities was not included in the Smith-Hughes Act. The George-Barden Act provides federal subsidy for distributive education for employed workers through cooperative education programs and supplementary courses. The Vocational Education Act of 1963 broadens the scope of federal subsidy to include day preparatory programs, as well as those for employed workers. Under the new act it is now possible to obtain federal subsidy for pre-employment training for distributive occupations in high schools and other institutions.

Enrollment data for Rhode Island for 1963-1964 show 63 students in the twelfth grade enrolled in part-time cooperative programs in distributive education, distributed as follows:

	Hope High School	Cranston East High School
Retailing	..	21
Merchandising	18	..
Personal services	..	24

Comparative data for cooperative distributive education programs for other states are available for 1962-63, and data for selected states are shown in Table 4. Rhode Island has a very low enrollment as compared with most of the other states. The program

for 1963-1964 in Rhode Island was limited to girls. In the United States as a whole the proportion of girls in such programs runs about 45 per cent.

During the years 1962-1963 and 1963-1964, no enrollment was reported for Rhode Island in evening extension courses for distributive workers. The enrollment in such courses during the year 1962-1963 in other selected states was as follows:

California	87,163
Texas	29,273
Michigan	15,514
Florida	13,107
Virginia	11,970
North Carolina	8,787

VII. TECHNICIANS AND OTHER TECHNICAL EDUCATION

The National Defense Education Act of 1958 provided under Title VIII(Title III of the George-Barden Act) for the training of technicians for a wide variety of occupations that could be classified as necessary for the national defense. During the first year of operation some 20,000 persons were enrolled in preparatory programs, increasing by the year 1962-1963 to more than 75,000. The majority of this enrollment has been in electronics and mechanical technology. The rise in enrollment in data processing has been rapid, from 63 in 1960 to more than 5,000 in 1963.

Enrollment in preparatory programs for the training of technicians in selected states for the year 1962-1963 is shown in Table 5. During that year Rhode Island enrolled only 31 students. In order to obtain a measure of comparison, this table also shows a ratio between the enrollment in technician training programs and the total non-agricultural employment in each of the selected states. The ratio for Rhode Island is substantially below any of the others, with the ratio for California 40 times as great, and that of Connecticut about 22 times as great. The ratio for Massachusetts is three times that of Rhode Island.

Employment data- Manpower Report of the President '64. U.S. Dept. of Labor.

Enrollment in Rhode Island in preparatory technical programs in 1963-1964 showed a total of 85 students, all at the Vocational-Technical School at Corliss Park. These were distributed as follows:

Automotive technology	12
Machine technology	18
Electronics	10
Drafting	45

Enrollment in evening extension classes for technical workers in 1963-1964 at the Vocational-Technical School numbered 121, distributed as follows:

Automotive technology	31
Precision instruments	18
Electronics	19
Cam design	25
Water purification	17
Welding	11

VIII. TRADE AND INDUSTRIAL EDUCATION

Preparatory Programs

Since the advent of federal aid for vocational education nearly fifty years ago, trade and industrial education has been an important part of the total program, especially in the industrialized states of the East. In Massachusetts and Connecticut the program has been carried on largely in separate vocational schools. In Rhode Island it is presently found both in separate vocational schools and in comprehensive high schools. In 1963-1964 there were 1,715 students enrolled in the State in classes preparing for entrance into the skilled crafts. Somewhat more than one-third of these students were in separate vocational schools. Nine different institutions participated in the program, three vocational schools and six comprehensive high schools.

The pre-employment trade and industrial education program is found largely in grades 10 to 12, with a few ungraded students and some in the 9th grade. The enrollment by grades in the several schools is shown in Table 6. Study of the data shows a considerable drop in enrollment in the 12th grade as compared with the 10th.

TABLE 6

ENROLLMENT IN PREPARATORY TRADE AND INDUSTRIAL EDUCATION PROGRAMS IN RHODE ISLAND BY SCHOOLS AND GRADES
1963 - 1964

School	Enrollment					
	Ungraded	9	10	11	12	Total

Total	52	138	621	536	368	1,715*

*Includes 41 girls.

Eleven different curriculums are provided in Rhode Island for preparatory students. Table 7 lists these curriculums together with the number of schools in which each curriculum is offered. This table also shows the enrollment for the 12th grade and the total for the curriculum within the State. Auto mechanics leads the list with a total of 404 students enrolled in 1963-1964, followed by woodworking with 302 students, and machine shop practice with 268 students. The average number of curriculums offered per school is 4 1/2. With the exception of Newport, the schools offering trade and industrial education programs are located in the thickly populated northeast section of the State.

The Rhode Island Vocational-Technical School, located in the Corliss Park area of Providence, and operated by the State Department of Education, draws its students from widely scattered sections of the State. The enrollment of 301 pupils in 1964-1965 was distributed among 27 municipalities as follows:

Barrington	14	Foster	1	Richmond	2
Bristol	13	Glocester	9	Scituate	1
Burrillville	10	Hopkinton	4	Smithfield	12
Charlestown	2	Johnston	23	S. Kingstown	11
Coventry	13	Lincoln	16	Warren	11
Cranston	36	Narragansett	9	Warwick	22
Cumberland	2	North Kingstown	4	Westerly	16
East Greenwich	1	North Providence	19	W. Warwick	20
East Providence	4	North Smithfield	1	Woonsocket	25

TABLE 7

ENROLLMENTS IN PREPARATORY TRADE AND INDUSTRIAL EDUCATION PROGRAMS IN RHODE ISLAND BY CURRICULUMS*
1963 - 1964

Curriculum	Number of Schools	Enrollment 12th Grade	Enrollment 9-12 Total
Auto mechanics	7	68	404
Drafting	1	11	46
Dressmaking	1	8	40
Electricity	5	38	182
Electronics	3	34	141

Printing	5	40	156
Sheet metal work	2	10	80
Textiles	1	2	24
Woodworking (carpentry/cabinet)	7	69	302
Total	9	368	1,715

*The total program includes 40 offerings in 11 different curriculums in 9 different schools. The average enrollment per curriculum offering is 43 students; the minimum, 15 students.

**37 ungraded.

The preparatory curriculum offered in the Rhode Island Vocational and Technical School included auto mechanics, electrical-electronics, machine shop and woodworking, with enrollments in 1963-1964 as follows:

Curriculum	Enrollment Grades 10th	11th	12th	Total
Auto mechanics	20	27	16	63
Electricity	6	7	6	19
Electronics	18	19	19	56
Machine shop	18	21	22	61
Woodworking	18	20	24	62
Total	80	94	87	261

An addition to the school plant during 1964-1965 added provision for science rooms, library, drafting room, gymnasium, auditorium, and three shops.

Enrollment data for 1963-1964 by curriculum and by schools are shown in Table 8. The three separate vocational schools, Central Falls, Pawtucket, and Vocational-Technical, enrolled 658 preparatory students, as compared with 1,057 enrollments in the six comprehensive high schools.

Many of the class groups in the various trade and industrial curriculums are small. Since it is generally assumed that an instructor can handle 15 students effectively in trade and industrial shops, the small class groups tend to lower the

overall efficiency of the instructional staff. In grades 10 to 12, 74 classes or 63 per cent of the total 118 classes, enrolled fewer than 15 pupils.

Table 9, compares the enrollment in preparatory trade and industrial education programs of Rhode Island with those of selected states. In these selected states the enrollment in post-secondary institutions in 1962-1963 was 45, 906 and in Type C programs (intensive programs for out-of-school youth and adults) it was 53, 386, as compared with an enrollment of nearly 200, 000 on the high school level. Rhode Island has no post-secondary enrollment. In enrollment per 1, 000 non-agricultural workers in Rhode Island, the ratio for secondary programs is 5.43, considerably higher than the average for the United States of 3.13. The average ratio for the nation in post-secondary programs is 1.56 enrollments per 1, 000 workers.

Placement of All-Day Students

In 1962 the U.S. Office of Education in cooperation with the states of the North Atlantic Region prepared an analysis of the placements of graduates of all-day trade and industrial education programs. The data for the 13 states in the region are shown in Table 10. Rhode Island placements in jobs related to the training received in school were 50.5 per cent of the total

number of graduates, almost the same as the average for the region. This table also shows the numbers of graduates by sex. The average for the region is 23.3 per cent female; that for Rhode Island is 0.3 per cent. Girls in Rhode Island have little opportunity for preparation for occupations in the industrial field.

Cooperative Part-time Programs

The cooperative part-time programs in the trade and industrial field in Rhode Island enrolled 102 students in 1963-1964. Programs were operated in four schools: Central Falls, Pawtucket, Providence, and Vocational-Technical. Enrollment by occupational fields was as follows:

Program	Enrollment
Machine shop	33
Auto mechanics	32
Printing	13
Woodwork	9
Electricity	7
Sheetmetal	6
Textiles	2
Total	102

Extension Programs

Occupational extension programs, largely operated during evening hours, which are provided for upgrading employed workers in Rhode Island include apprentice related classes, extension courses for mechanics, and fireman training. During 1963-1964 some 462 students were enrolled in fireman training

programs within the State. Apprentice training in 14 different occupations was provided at three centers, East Providence, Providence, and Vocational-Technical. The 1963-1964 enrollment by schools and programs is shown in Table 11.

The 1963-1964 enrollment data on extension courses for skilled mechanics are shown in Table 12. During that year, courses in fourteen fields were offered at four locations, Pawtucket, Providence, Vocational-Technical, and Woonsocket. A total of 991 persons were enrolled in the various courses with the largest number, 535, enrolled in ten different courses at the Vocational-Technical School.

Comparative enrollment in supplementary extension courses for employed trade and industrial workers for selected states are shown in Table 13. From this table it can be noted that in some states, such as California, New York and Ohio, large numbers of persons are enrolled in these programs.

A measure of the effort being made in this type of education by each state is the enrollment per thousand workers in non-agricultural employment. These figures are also shown in Table 13. A study of the table shows that the State of Washington ranks highest (38.4), followed by Georgia (16.9), Wisconsin (14.5) and California (14.1). Rhode Island with an enrollment of only 4

persons per thousand workers ranked very low in this list of twenty states. States with lower ratios were Pennsylvania, Massachusetts and Illinois.

M. D. T. A. and A. R. A. Programs

Under the federal Manpower Development and Training Act, the State Department of Education cooperates with the State Department of Employment Security in the training of unemployed persons. These persons are selected by the Department of Education, and on completion of training placed by the Department of Employment Security. The training courses vary in length and in educational level. In 1963-1964 training programs were offered in nine occupational fields and a total of 467 persons completed the courses. Ten different schools participated in the program, and three courses were offered in spaces outside the schools. Enrollment data for the various programs are presented in Table 14.

IX. ENROLLMENT OF GIRLS IN OCCUPATIONAL EDUCATION

Table 15 shows total enrollment and the percentage of females enrolled in four major occupational programs in the United States, Rhode Island, Connecticut, Massachusetts and New York. Especially noteworthy is the small percentage of girls enrolled in trade and industrial programs in Rhode Island particularly in view of the fact that the industry of the State employs a high percentage of female labor.

The table shows, in the four major categories of occupational education, a total percentage of girls enrolled which is substantially lower for Rhode Island than the United States and the selected nearby states.

Percentage of Girls Enrolled in Occupational Programs

New York	34.8
United States	25.0
Connecticut	15.7
Massachusetts	12.3
Rhode Island	10.4

X. RETRAINING AND UPGRADING PROGRAMS FOR EMPLOYED ADULTS

Occupational education opportunity for employed adults is a vital part of a state's total program. Rapid technological changes are making the availability of retraining and upgrading programs a necessity for many persons. Table 16 compares the enrollment in selected states in courses for employed adults in distributive, trade and industrial, technical, and health occupations. This table also shows a ratio of the total enrollment of each state to the overall employment in non-agricultural occupations in that state. The data are for the year 1962-1963.

As can be noted from the table, Rhode Island with a ratio of only 4.4 persons enrolled in training programs per thousand of employed workers, ranked near the bottom of the list of states selected. Michigan with 58.6 persons enrolled per thousand and California with 38.3, ranked at the top of the list. For the United States as a whole, approximately 16.4 persons per thousand non-agricultural workers were enrolled in retraining and upgrading programs.

XI. SUMMARY OF PREPARATORY AND COOPERATIVE VOCATIONAL EDUCATION PROGRAMS

The 1963-1964 enrollment in all preparatory and cooperative occupational education programs in Rhode Island are shown below. Business education is excluded because it was not considered vocational in 1963-1964. Extension programs for employed workers and apprentice programs are not included since they are for purposes of upgrading and are therefore not considered preparatory. M. D. T. A. programs for unemployed workers are considered preparatory and are consequently included.

Program	Enrollment
Agriculture	491
Cooperative part-time	
Industrial	102
Distributive	63
Business	10
Trade and industry	1, 715
Technical (Title III)	85
Home economics	2, 964
Practical nursing	100
M. D. T. A. and A. R. A.	467
Total	5, 997

XII. CONCLUSIONS AND RECOMMENDATIONS

An examination of the data presented in this report indicates serious inadequacies and gaps in the occupational and vocational-technical programs provided the youth and adults of Rhode Island. For example, few, if any, opportunities are available at a suitable technical level for adult farmers, or for those who would like to specialize as landscape developers and greenhouse operators. Also, the present programs in the health occupations and in sales and distributive occupations leave much to be desired. In fact, a study of twenty selected states revealed that Rhode Island ranked lowest in the number of persons enrolled in health occupation programs per 1,000 persons in hospitals. The Rhode Island program in sales and distributive education is operated at only two high schools and is limited entirely to girls. No evening extension courses are available for distributive workers. Furthermore, in an industrial state such as Rhode Island, it is surprising to find few pupils enrolled in preparatory programs for technicians and for advanced technical programs. Opportunities for vocational and technical education of the non-degree type are practically non-existent in the state. In addition, the State provides few opportunities for girls to receive occupational and vocational training at either the secondary or post-secondary level. The facilities and programs

available in the state for the retraining and upgrading of employed youth and adults are extremely limited.

On the basis of the observations and studies made by the consultants, the following conclusions and recommendations warrant serious consideration when developing an overall plan of occupational and vocational-technical education that will serve the needs of the people and enhance the economy of the State:

1. The present range of preparatory curriculums of the trade and industrial type at the secondary school level is limited and should be modified to bring it into line with modern industrial practices. The curriculums in single specialized skills should be broadened in order to prepare pupils for clusters of related occupations. For instance, printing should be broadened to graphic arts including various methods of offset printing. Other clusters should include preparation for metal working, service, electrical, and building construction occupations. All curriculums should be reviewed and a careful scrutiny should be made of the labor market needs for a particular skill. For example, a serious question might be raised concerning the possibility of placing the number of pupils enrolled in woodworking programs.

2. There is mounting evidence that the trend to provide secondary school pupils with a broad general background and to defer specialized training to the later high school years or even to the post-secondary level will continue. In view of this trend, specialized preparation for trade and industrial occupations should be offered for most pupils only in grades 11 and 12 of the secondary schools.

3. The Vocational Education Act of 1963 encourages greater attention to home economics programs preparing pupils for jobs in the food trades. A variety of programs in this area would provide increased occupational training opportunities for girls and at the same time would fill a gap by preparing more people for the expanding food trades.

4. Over the past several years, the number of persons employed in sales and distributive positions in wholesale and retail establishments has been increasing. This has been true for both the nation as a whole and for Rhode Island. Practically all studies indicate that this trend will continue. It seems reasonable to recommend therefore that the preparatory and cooperative distributive education programs in the State be expanded and strengthened and more pupils be encouraged to enroll.

5. For many years, the number of persons employed in agriculture has been declining. Advances in agricultural technology make almost certain a continuation of this decline, especially in states such as Rhode Island.

The data of this and other studies of the consultants indicate that the number of pupils preparing for agriculture in Rhode Island is greater than can be absorbed by the farms of the state. The agricultural curriculums should be broadened to include preparation of landscape gardeners, florists, nurserymen, and other horticultural occupations. Evening and extension programs involving the business and advanced technology of agriculture should be provided for the adult farmers of the state.

6. In many ways, the high school business education courses provide the most effective occupational programs in Rhode Island. Their success and popularity over the years and the financial support now available under the Vocational Education Act of 1963 would indicate that they should be expanded and strengthened. Consideration should be given to the expansion of the part-time and the business machines programs.

Preparation of pupils for employment in automatic data processing and computer operation and programming should be included in the overall program with most of the emphasis being concentrated at the post-secondary level. The post-secondary program should also include advanced office practice, including secretarial and basic accounting training. Provision should be made for preparing specialized secretaries in such fields as medicine and law.

7. The number of pupils being trained as technicians and technical workers in Rhode Island is low - substantially below most of the states. A post-secondary program for the training of these workers is vitally needed. It is strongly recommended that a wide variety of technical programs be developed and made available to the youth and young adults of the state in unified Junior College Vocational-Technical Centers.

8. Opportunities for training in the health occupations are extremely limited in Rhode Island. Much more attention should be given to this field of work. The present program for practical nurses does not satisfy the need of the state and should be expanded to permit increased enrollment.

In addition, in line with the national trend, a two-year training program for professional nurses should be developed at the post-secondary level and programs for medical and dental assistants and laboratory technicians should be provided at the Junior College Vocational-Technical Centers.

9. The development of the resort industry appears to have great potential for Rhode Island economy. The favorable location of the state in the northeastern megalopolis, the continued increase of population in the urban centers, the increase in leisure time as a result of shorter work weeks, and the expansion of the arterial highway network connecting the major cities could lead to rapid development of the state's many attractive recreational resources. Consideration should be given now to programs preparing the youth and adults of the state for the managerial and operational aspects of this expanding industry.

10. The foods trades provide many job opportunities for specially trained workers. The extent of these job opportunities would justify specialized courses of varying length for out-of-school youth and adults in preparation for such jobs as cooks, bakers and meat-cutters. These

courses might be placed at the Corliss Park facility which could be developed as a center for specialized courses for out-of-school youth and adults.

11. Greater opportunities should be provided for girls and women to receive training and up-grading in a variety of occupations. Much has been done in the past to prepare women for business and office positions. Women, however, are being employed in a wide variety of occupations for which few preparatory programs are available. Wherever feasible the overall curriculum should be expanded to in-include such fields as cosmetology, the needle trades, the jewelry trade, the foods trades, and service occupations, especially those where home economic skills are needed.

12. It now seems clear that accelerated technological change will make necessary an expansion of extension programs for retraining and up-grading employed workers. These programs might range from a few weeks to a year or more in length. Programs of various types should be developed and offered at a number of locations including Corliss Park and the proposed Junior College Vocational-Technical Centers.

*VOCATIONAL AGRICULTURE; AGRICULTURAL MACHINERY; *EQUIPMENT; *HAND TOOLS; SCHOOL SHOPS; SUPPLIES; MACHINE TOOLS

Teachers, administrators, and supervisors can use this as a guide to selection of appropriate tools and equipment for effective agricultural mechanics instruction. Items are listed under seven main sections: (1) Tools and Equipment, (2) Power Tools and Equipment, (3) Field Equipment, (4) Office and Classroom Equipment, (5) Shop Equipment, (6) Visual Aids, and (7) Materials and Supplies. Specifications are partially described. Prices and manufacturers are listed, when practical, as a guide to suitable quality. Quantities of tools and equipment recommended are listed under headings of: (1) electric power and processing, (2) farm power and machinery, (3) agricultural construction, building, and maintenance, (4) soil science and water management, (5) animal science, and (6) plant science and forestry. PREFACE

This information has been compiled as a guide to superintendents, principals, supervisors, and teachers of vocational agriculture in providing suitable tools and equipment for effective instruction in agricultural mechanics. Capital investment in machinery, buildings, and other facilities has increased to the point where, in many cases, it now exceeds all other investments in the farm business, including the land. This mechanization, increased utilization of facilities, and automation focuses a new and greater importance on vocational agriculture instruction in agricultural mechanics. In order for the farm operator and farm workers to have the knowledge and skill necessary to make decisions regarding the selection, operation, maintenance, and repair of their machines and facilities, they must have adequate training.

To provide instruction to meet the needs of future farm operators and workers in these areas, adequate equipment, tools, and reference materials are necessary. Instructional programs will vary from one school to another. This fact makes it almost impossible to publish a basic list of equipment that will be adequate to all situations. Several factors influence the recommendation of tools and equipment for instruction in agricultural mechanics. They are: (1) number of students, (2) available space, (3) local budget, and (4) objectives, type, and extent of program being offered.

USE OF THIS PUBLICATION

The items in this publication are listed alphabetically. The description of each item is not, in all cases, a complete specification so this list should not be copied verbatim. When asking for bids from suppliers, the description should be studied to ascertain if it is adequate for the item that is being considered. Brand names are being used as a guide to quality and as an aid to the buyer and supplier. The use of brand names shall not be construed as an endorsement of any one make.

Six (6) vertical columns are used to show the item needed in the four (4) areas in the vocational agriculture program, that is, Agricultural Mechanics, Soil Science, Animal Science, and Plant Science. Water Management, though usually in Agricultural Mechanics, is included in with Soil Science due to the close alliance of the two fields.

Since a great majority of the items will be used in Agricultural Mechanics, this area has been divided into Electric Power and Processing (electricity, electric motors, materials handling, etc.), Farm Power and Machinery (tractors, auxiliary engines, trucks and agricultural field machinery), and Agricultural Construction, Buildings and Maintenance (carpentry, concrete and concrete

masonry, preserving, fencing, hot metal work, cold metal work, tool fitting, arc welding, gas welding, domestic water systems and disposal).

The numbers used in these columns are based on a class of 16 students, working in groups of 4 each. The highest number opposite an item is the quantity of that item needed in a department. For instance, in the case of the first item, "Air, Blow Gun," 2 is the total needed for a particular department. It is realized, however, that the quantity needed for a particular purpose may vary across the State. For example, two-man, 6-foot, crosscut saws may not be necessary where forestry is not important.

The list prices are prices obtained from catalogue and dealers located in Florida. The prices are subject to change and are for estimating purposes only. These prices vary in different communities. Some dealers offer discounts, others do not. Consideration should be given to whether the supplier will deliver the items set-up and ready to operate or whether they will arrive in pieces for the buyer to set-up. Dealer service is also a point to consider. Firm bids on items should be obtained to arrive at an exact cost. The prices shown are unit prices.

The "Total" column has been left blank so it can be used for extensions of the list price (unit price) after it has been determined if the quantities of a specific item are adequate for a particular department. The last column, "Notes," has also been left blank for the use of the individual department.

Tools and equipment purchased should be of high quality and from reputable manufacturers. Factors to consider in purchasing tools should include adequate size, adequate numbers, quality, availability of service and parts, and cost.

A list of consumable supplies is included on pages 39-42, but no quantities or prices are shown.

The equipping of a shop is only the beginning. It is also essential to delegate responsibility for proper care, storage, use, repair, and inventory of tools and equipment.

A very important matter is that of adequate financing for the shop program. The old recommendation of $5.00 per student and $2.50 per student for maintenance of equipment is outdated in view of current cost and program objectives. A more realistic figure would be $8.00 per student for consumable supplies and $4.00 per student for equipment maintenance.

On the power tool list, certain tools have been marked as essential for a vocational agriculture shop. The other power tools are highly desirable and should be added as soon as possible to complete the shop. No attempt has been made to make such a distinction between the items on the tool and equipment list. As

stated before, a careful study of each individual shop should be made taking into consideration the factors already discussed.

Clarence J. Rogers, Assistant Professor

POWER TOOLS AND EQUIPMENT

Item	Description	Number Needed	List Price
Chargers	Battery, Heavy Duty, Slow Charger, W/Silicon Rectifier, Capacity Six - 6 volt, three - 12 volt, or one - 24 volt batteries. 115 volts, 50/60 cycle, 10 amp input, complete with battery jumper cables, leads, 3 wire power cord with 3 prong parallel grounding type plug and switch. Charger to be delivered complete and ready to operate Marquette No. 304A or equal.		$89.50
*Compressor	Air, complete with 1-1/2 h.p., single-phase, 60 cycle electric motor with automatic start-stop control. 3.4 CFM displacement, 60 gallon tank with operating pressure up to 150 PSI, safety valve, outlet valve, and gauges, 3 wire power cord with 3 prong parallel grounding type plug. Compressor to be shipped with all wiring, piping, control equipment, and ready to operate. Worthington No. 1-1/2 T-1 or equal.	1	375.00
*Drill	Portable, electric 115 volt, ball bearings, 1/4" capacity, piston grip type, complete with switch and 3 wire power cord and 3 prong parallel grounding type plug. Drill to be delivered assembled and ready for use. Balck and Decker No. 345 or equal.	1	34.50
*Drill	Portable, electric 115 volt, heavy duty end handle drill, ball and needle bearings, 3/8" capacity, complete with switch and 3 wire power cord and 3 prong parallel grounding type plug, Black and Decker No. 706.	1	67.00
*Drill Press	15" variable speed, floor model, standard tilting table, 1/2" key chuck, 3/4 h.p., single-phase, 1750 RPM, 115/230 volt motor with push button switch and magnetic starter, spindle speeds 300-3100 RPM, complete with belt, motor pulley belt and pulley guards, 3 wire power cord with 3 prong parallel grounding type plug. Mortising attachment, with 1/4", 5/16", 3/8", and 1/2" mortising chisels and bits, and 1-Quick Set Vise, 2-1/2" x 1-7/16". Drill press to be delivered set-up and ready for use. Delta No. 15-310 or equal.	1	388.95

*Essential to agricultural mechanics program.

POWER TOOLS AND EQUIPMENT (CONT'D)

Item	Description	Number Needed	List Price
*Grinder	7" pedistal type, 1/2 h.p., 115/230 volt, 3450 RPM totally enclosed motor with on-off toggle switch, complete with water pot, twin-lite safety shields with bulbs, wheel guards, tool rests, two grinding wheels, 1-wire wheel and 1-buffing wheel and 3 wire power cord with 3 prong parallel grounding type plug. Grinder to be delivered set-up and ready to use. Delta No. 23-221 or equal.	1	189.40
*Grinder	7" bench-type, 1/2 h.p., 115/230 volt, 3450 RPM totally enclosed motor with on-off toggle switch, complete with water pot, twin-lite safety shields with bulbs, wheel guards, tool rests, two grinding wheels, (1"), 1 wire wheel and 1 buffing wheel and 3 wire power cord with 3 prong parallel grounding type plug. Grinder to be delivered set-up and ready to use. Delta No. 23-201 or equal.	1	151.40
Hacksaw	Power, dry-cut, 6-3/4" x 6-3/4" capacity, 1/2 h.p., 1750 RPM, 115/230 volt, motor with on-off switch, automatic-stop, four-speed, 12"-14" blade, variable pressure-feed control, with pressure relief on reverse stroke and automatic lift, and 3 wire power cord with 3 prong parallel grounding type plug. Hacksaw to be delivered set-up and ready for use. Keller 3-B or equal.		285.00
	Blades, power machine, Milford.		1.90 ea.
Hoist	Chain, 1-ton capacity, Budgit No. 903220 or equal.	1	50.00
	"A" frame, portable, complete with castors and trolley, Budgit No. 903154 or equal.	1	274.00
*Jointer	8" long bed, 2-way tilting fence, both tables raise or lower on inclined dove-tailed ways with adjustable gibs, bed at least 5-1/2 feet long, cast-iron stand to fully enclose motor, belts, dust chute and pulleys, 3-knife cutterhead, 1 h.p., 115/230 volt 60-cycle, 1725 RPM motor, and 3 wire power cord with 3 prong parallel grounding type plug. Jointer to be shipped complete and ready for operation. Delta No. 37-331 or equal.	1	511.75

POWER TOOLS AND EQUIPMENT (CONT'D)

Item	Description	Number Needed	List Price
Mixer	Concrete, 4-1/2 cu. ft. capacity, 2-1/2 cu. ft. batch, complete with 1/3 h.p., 115/230 volt motor with on-off switch, and 3 wire power cord with 3 prong parallel grounding type plug. Sears No. 64A 536 N or equal.		110.00
Planer	13" x 5", 2 h.p., capacitor start, 115/230 volt, 60 cycle, single-phase, 1725 RPM motor with magnetic starter complete with motor pulley, V-belt, cover plate and 3 wire power cord with 3 prong parallel grounding type plug, floor model complete with base and equipped with safety clutch, planer to be shipped complete and ready for operation. Delta No. 22-121 or equal.		788.25
Press	Hydraulic, 25-ton capacity, complete with table plates, V-blocks, pressure gauge and self-locking table hoist. Dake No. 25H or equal.		450.00
Sander	Electric, portable, 3" x 21" belt, spur-gear drive, ball and needle bearings, complete with 3 wire power cord with 3 prong parallel grounding type plug. Porter Cable No. 153 or equal.		85.00
*Saw	Band, 14" metal-wood cutting, 8 cutting speeds, 40-3000 RPM, guide blocks and back-up bearings to be independently adjustable for safety and accuracy, direct-reading tensioning scale, table machined for rip fence guide rails, 1/2 h.p., 115/230 volt, single-phase motor, switch, 3 wire power cord with 3 prong parallel grounding type plug, totally enclosed cast-iron stand, guard for V-belt, matched set of V-belts, fence attachment, sliding gauge, and 2-1/4", 2-3/8", and 2-1/2" wood cutting blades, 2-1/4", 2-3/8", 2-1/2" skip tooth blades for soft metals, 2-1/2", 14-tooth metal cutting blades. Delta No. 28-380 or equal.	1	461.45
	Blade, Butt Welder, 115-volt, 60-cycle, single-phase, 1/2" capacity, complete with built-in grinder with guard, carrying handle, brackets for bench mounting and 3 wire power cord with 3 prong parallel grounding type plug. Delta No. 28-463 or equal.		245.00
	Chain, 7 h.p., McCollough or equal.		225.00

FIELD EQUIPMENT

Field equipment for departments of vocational agriculture will vary over the state. In all likelihood, no two departments will have the same requirements. With this in mind, considering what will be suitable for providing sound basic instruction, we have arbitrarily selected a 30 horsepower, 2-bottom plow tractor upon which to base our figuring and have selected equipment that could be used on this size tractor. Since tractor prices will vary greatly from locality to locality and since the price depends greatly upon the accessories ordered with the tractor, we have based the price upon the following general formula: (1) Gasoline tractors @ $90.00 per drawbar horsepower, (2) L.P. Gas tractors @ $95.00 per drawbar horsepower, and (3) Diesel tractors @ $100.00 per drawbar horsepower.

FIELD EQUIPMENT

Tractor	30 drawbar horsepower, 2-bottom plow, 4 or more forward speed ranges, adjustable front axle, rear treads adjustable from 48" to 76", electric starter and lights, live power take off land lever or foot pedal controlled with 2 speeds, 546 and 1000 R.P.M. 3-point hitch hydraulically controlled and equipped with operation hour meter. (Based on above formula for a gasoline operated tractor)	$2,700.00
Blade	6' rear mounted, 3-point hitch with adjustable pitch and blade angle and reversible for back-fill operations.	125.00
Cultivator	2-4 row ridged shank, with 11 shanks sweeps and rolling coulters.	270.00
Fertilizer Spreader	8 ft. pull type, ground driven (seeder attachments optional), 14" wheels for pneumatic tires.	245.00
Grain Drill	Pull type, 13 drill spouts, 7" spacing, 14" wheels for pneumatic tires, ground driven.	1,085.00
Harrow	Rear mounted, 3-point hitch 18-20" cut out disc, 9" spacing in front, 7-1/2 spacing in rear, quick angle change and equipped with triple seal permanent lubricated ball bearings.	400.00
Hay Baler	Pull type, PTO driven, 14" wheels with pneymatic tires, twin tie, slip clutch protection.	2,000.00
Mower	Rear mounted, 3-point hitch, 7' cutter bar, hydraulic controlled, PTO driven.	568.00
Planter	Rear mounted, 3-point hitch, 2 row, corn, peanuts, cotton, etc., with fertilizer distributor.	375.00
Plow	Rear mounted, 3-point hitch, 2 bottom 16" moldboard with rolling coulters and spring trip shanks.	325.00
Rake	Rear mounted, 3-point hitch, side delivery, 10' raking width, 5 bar self cleaning, and equipped with adjustable castor gauge wheels.	555.00
Rotary Cultivator	Rear mounted, 3-point hitch, 2 row to cultivate 32" to 36" rows, PTO driven, gear box mounted on top and equipped with gauge wheels and fenders.	695.00

FIELD EQUIPMENT (CONT'D)

Rotary Cutter	Rear mounted, 3-point hitch, PTO driven, 5 ft. cutters with slip clutch or sheer pin and tail wheel.	$ 325.00
Scoops	Rear mounted, 3-point hitch, reversible bucket, heaped capacity 10 cu. ft.	116.00
Seeder	Rear mounted, 3-point hitch, Cyclone type, capacity 1 bushel, for all type seeds.	50.50
Sprayer	Kit, rear mounted, PTO driven, complete with pump, hoses, and fittings, nozzles, gauges, pressure relief valve, control manifold and suction strainer. Capacity up to 305 lbs. pressure.	90.00
Wagon	4-wheel, 5th wheel type, 9000 lb. capacity with 14" pneumatic tires.	200.00

OTHER FIELD EQUIPMENT

Cattle Squeeze	Loading chute, and trimming stock, portable, Hildebrand or equal.	465.00
Cultivator	Push type, 24" wheel, complete with 5 tooth weeder, turning hill plow, reversible shovel and wrench.	9.39
Rotary Tiller	Walking type, 3 h.p. engine, forward and reverse speeds and 17" minimum tilling width.	125.00
Sprayer	Garden, 15 gallon capacity complete with 2 h.p. gas engine, hose and nozzle, pressure up to 150 PSI.	132.00

OFFICE AND CLASSROOM EQUIPMENT

Item	Description
Office Equipment	Adding Machine 10-key Remington
	Chair, swivel
	Chair, straight
	Desk
	2 File Cabinets, legal-size, per teacher
	1 File Cabinet, letter-size, per teacher
	Typewriter
	Bookcase
Classroom Equipment	Bulletin Board, 36" x 72"
	Cabinets, storage, 36" x 18" x 78"
	Chairs
	Desk
	Files, bulletin, complete with center divider and pressboard guider for bulletins
	Magazine Rack
	Notebook Racks
	Tables, student

SHOP EQUIPMENT

Item	Description
Benches	Wood, 30" x 72" x 33" high (may be constructed in shop) sizes vary Hallowell 600-R-630-33 Metal, 29" x 72" x 33 (may be constructed in shop) sizes vary, Hallowell 600-X-629-33
Blackboard	Portable and reversible, 4' x 6'
Bleachers	3-tiered, portable type
Cabinets	Storage, metal, 36" x 21" x 78"
Tables	Arc welding, with see through shield, 36" x 36" Paxon #AW3 2 Oxy-acetylene, with fire brick top 2 Oxy-acetylene, with cutting top

VISUAL AIDS

Item	Number	Description	Cost
Easel	1	Folding - all metal adjustable, 6 feet in height, sufficient to hold material up to 3' x 5'	$33.00
Filmstrip-Slide Projector	1	For 2" x 2" frames and film strips; 750 watts	97.50
Motion picture Projector	1	16 MM sound; 750 watts	469.00
Overhead Projector	1	1000 watts, with forced draft centrifugal blower, 115 volts, A.C., with minimum of 4" lens and with roll attachment	255.00
Screen	1	Daylight - 50" x 50" on tripod	37.50
Tape Recorder	1	1/4" tape, 4 track, capacity 7" reel, portable, self contained amplifier, 2 reg. response 50-15,000 CPS, capstan drive, 7-1/2, 3-3/4, and 1-7/8 speeds, digital index counter complete with microphone, cords, extra reel, and level record indicator	175.00

CONSUMABLE MATERIALS AND SUPPLIES

Due to the varied nature and scope of instruction in vocational agriculture and the many different kinds and types of materials available, it is difficult to prepare a specific list of essential items suitable for all purposes. Some items create storage problems is purchased in quantity. For such items it is suggested that they be added as needed. However, in most cases, the quantities of consumable supplies and materials needed for one school year should be obtained in the summer before the opening of school.

Distributive Education is a vocational program providing instruction in marketing and merchandising for those engaged in retailing, wholesaling and service businesses. It offers instruction for high school and post-high school students and adults employed in distributive occupations.

WHAT DOES A CAREER IN DISTRIBUTIVE EDUCATION OFFER YOU?

--Challenging work in an expanding field of education.

--A variety of opportunities, both in education and in business.

--An opportunity to serve young people, the community and the Nation.

--Many opportunities for leadership and responsibility.

--The respect of the community.

--A good income and financial security.

--An opportunity for advancement.

--Many personal satisfactions.

"Careers in Distributive Education," was prepared by Mary Klaurens, Teacher-Coordinator of Distributive Education at Patrick Henry High School, Minneapolis, Minnesota; Charles Swanum, Counselor at Mounds View High School, New Brighton, Minnesota; John Hinsverk, Distributive Education Coordinator at the Vocational and Adult School, Eau Claire, Wisconsin; under the direction of Warren G. Meyer, Associate Professor of Education at the University of Minnesota, and Howard C. Rosenwinkel, State Supervisor of Distributive Education, Minnesota Department of Education. This project was financed with re-allocated George-Barden Funds through the Vocational Division of the Minnesota State Department of Education, and funds contributed by Red Owl Stores, Inc.

A YOUNG MAN LAUNCHES HIS CAREER

Harold Hansen's high school teachers spoke of him as a "live wire." He had better than average ability and might have earned better grades if he had concentrated more on his school work. He liked school because he liked being with his friends, but he wasn't particularly impressed with what he had to study. He also liked working on the yearbook and his part-time job selling for a local retail store. He enjoyed selling, but he was not sure that he wanted to spend his life at it. He knew that he wanted to work at something that had to do with people.

Harold tended to see the practical side of things. He didn't rebel at theory, but on the other hand he did not apply himself well unless he saw the practical value of an assignment. Perhaps this was why he liked business--everything seemed practical there. However, the only business subject he had taken was typewriting, and he didn't "set the world on fire" in that class either. The school had no distributive education program as yet, so he had no exposure to the field of distributive education.

During his senior year, when the time came to make decisions concerning college registration, Harold was interested in furtherir his education. He was undecided as to where he wanted to go or what he wanted to study. After several meetings with the guidance counselor, Harold decided to investigate a career in distributive education which seemed to call for the combination of traits and interests he possessed. In essence, here is what Harold said: "As I see it, my test scores indicate that I have the scholastic ability necessary to succeed in college. I rank in the upper half of my class, though my grades could have been better. I have strong social service interests and rank high in persuasion on personality tests. I believe I am intellectually curious and that I do apply myself when I see the practical value of an assignment. Of all the careers mentioned as possible vocational choices, I am especially interested in learning more about distributive education."

Harold read all the literature he could find which dealt with

the work of a distributive education teacher-coordinator. As a result, he decided to enter the distributive education teacher-preparation program at a large university where he combined education and business courses.

Because he did not have much financial assistance, he earned part of his expenses in a distributive occupation which also helped him prepare for his future work as a teacher-coordinator in a city of 8,000. He had charge of both the high school cooperative part-time and the adult education programs. Harold enjoyed his daily contacts with business and received great satisfaction out of the successes of his students. After three successful years he transferred to a large suburban school. Upon completing his Master's degree he took a position as supervisor of distributive education in a junior college.

Harold is now 26 years old. He is very happy with his work and earns a good salary. His business contacts have brought him the pleasure of a good social life. He is a respected member of the community because he has helped people to become successful in their careers and because he has contributed his knowledge and personal skills to the business community. Occasionally he does some training consultant work which increases his prestige and supplements his regular income. If he wishes, he can continue in his present occupation indefinitely. Then too, he can enter the field of distribution, or with further training, become an educational administrator or college professor. Harold's background of education and experience prepared him for several career goals. He is not on a one-way street . . . . . .

The purpose of this brief story was to give you some idea of the kind of person who usually becomes a successful teacher-coordinator and to point out what can be expected by way of initial employment in distributive education. The central figure of this story, who is a composite of many people in the field, could just as well have been a young lady. Although the majority of teacher-coordinators are men, there are many women who succeed in this career also. We shall drop Harold Hansen at this point and, after defining distribution education and giving you a brief history of it, we shall look at what a teacher-coordinator does in some detail.

WHAT IS DISTRIBUTIVE EDUCATION?

A teacher-coordinator visits parents to discuss the distributive education program.

Distributive education is a comparatively new field of vocational education which provides instruction for youth and adults who follow careers in distribution. "But what is distribution?" you may ask. Simply stated, distribution includes marketing, merchandising, and management. It deals with the distribution of merchandise and services.

Distribution is a very broad field which includes professional buying, selling, storing, transporting, risk-bearing and financing. In fact, it includes all of the activities that take place in the market from the time a product is made until it is purchased by the consumer.

Distributive occupations (those for which Harold Hansen's students prepared) are found in a variety of business establishments including retail stores, wholesale distributors, consumer service businesses and business service establishments.

Now let's look briefly at the educational program which helps people succeed in distributive occupations. Distributive education is offered at several grade levels, usually extending from senior high school to post-college instruction. The beginning level is called preparatory or pre-employment education. In high school, this is usually followed by cooperative part-time instruction in which students combine practical business experience with courses in school.

After high school a distributive education graduate may go directly into full-time employment in a distributive occupation, or he or she may prepare for a supervisory position by enrolling in a post-high school distributive education program in a junior college or area technical-vocational school.

Those who wish to become marketing and merchandising executives in large firms may continue their education in collegiate schools of business or attend adult distributive education classes. Thus, you see that distributive education is truly a broad field preparing for careers in a wide variety of positions in many different kinds of business firms.

BRIEF HISTORY OF DISTRIBUTIVE EDUCATION

The history of distributive education reads like a classic success story. From a humble beginning it has risen to a position of recognized importance in the field of training workers for employment in distributive occupations. Distributive education, as we know it today, got its start in Boston in 1905 when Mrs. Lucinda Prince, in cooperation with the Women's Educational and Industrial Union organized the first school which provided training for persons interested in retail store work. By 1906 a number of stores had agreed to participate in this training program, allowing students to acquire practical experience by working in their stores on a part-time basis while attending classes in retailing.

The early success of this program resulted in the development of similar programs in other cities. In 1910, Providence, Rhode Island, organized a school for retail store workers similar to the school in Boston. By 1912 the first classes for teaching retail store selling in high school had been organized to fulfill the need for instructors capable of teaching the store training courses. Program development was slow in smaller communities, though the need for such training was great. Recognition by Congress of the importance of training for the distributive occupations led to inclusion of Federal support for distributive education in the Smith-Hughes Act of 1917 and a series of other Federal vocational education acts which provided Federal funds to financially support distributive education in public high schools, junior colleges and adult education classes.

Today, there are some 1600 distributive education coordinators of the cooperative part-time training programs in the country. Under their direction and leadership approximately 50,000 high school students are trained annually to fill the ever-increasing number of job openings in distributive occupations. In addition, over 4000 adult education instructors teach more than a quarter-million evening school students marketing and merchandising courses of various kinds--buying, credit, display, insurance, real estate, advertising, salesmanship, retailing, wholesaleing, and dozens of others. Distributive education includes all instruction in the distribution of goods and services--all the way from the functions of industrial giant corporations to those of the corner grocer.

WHAT IS THE JOB OF A TEACHER-COORDINATOR ?

While there are many occupations in the field of distributive education, that of the teacher-coordinator provides the basic experience for launching a successful career. For most distributive educators it is the entry occupation, and for many it becomes a lifetime work because they enjoy their association with young people and with the businessmen in the community.

The work of the distributive education teacher-coordinator is varied and interesting. His most important job is that of train-

ing students for careers in distribution. This includes instruction in retailing, wholesaleing, buying, selling, advertising, market research, display, and many other activities performed in moving goods and services from the producer to the ultimate consumer. In addition to his classroom teaching the coordinator makes direct personal contact with the businessmen of his community who provide training and part-time employment for his students. A teacher coordinator also serves as sponsor for the local chapter of the Distributive Education Clubs of America (DECA), a nation-wide organization of future marketing and merchandising employees, similar to that of the Future Farmers of America and the Future Homemakers of America.

In addition many teacher-coordinators assume the responsibility for the administration of the adult distributive education program, and some of them teach evening school courses when they have the time and the necessary background. Of course, teacher-coordinators take an active part in community affairs, particularly when the activities have a bearing on their work. Thus, they usually belong to a service club, such as Kiwanis, Rotary, Lions, Junior Chamber of Commerce, or other similar organizations. We shall look into the teacher-coordinator's job in more detail to see what each of the activities mentioned really means.

--AS A CLASSROOM TEACHER

Most distributive education teachers enjoy their classroom experiences, partly because of the interesting activities that take place and the practical subject matter covered, but mostly because of the enthusiasm of the students they teach. The students have chosen the course to prepare for an occupation and career. This has a strong influence on the learner's attitude toward the content material. Thus, if the teacher uses good judgment in selection of content and methods, student interest runs high. Also, students electing the distributive education program usually are somewhat of the outgoing personality type, and it is easy to stimulate discussion or use other learning activities that involve student participation. Usually the class is fun for pupils and teacher alike.

There are really two kinds of high school distributive education classes-- (1) pre-employment classes that prepare a student to enter a distributive occupation after completing the course, and (2) cooperative part-time classes for students who are also receiving on-the-job training and experience in a local business firm as a part of their school program. Pre-employment distributive education classes in salesmanship or retailing are usually open to all who wish to enroll to gain some knowledge of marketing and merchandising in preparation to enter the cooperative part-time program, to acquire the salesmanship skills that are vital to success in many career fields, or to qualify for a beginning job in distribution.

Cooperative part-time students are those who spend a part of each school day on a real job putting into practice what they learn in the classroom. They have been selected for this program because they are interested in a career in distribution and can meet the qualfifcations specified by the employers in the business community. With the help of other teachers and the guidance counselor, the teacher-coordinator selects students for the cooperative part-time program who will benefit from the training and who are employable. The employer, of course, has the final word in accepting the student for on-the-job training in his place of business.

In the classroom the distributive education teacher teaches his students salesmanship, retailing, merchandising, display, sales promotion, finance and control, personnel management and a host of other subjects relating to their career objectives in the field of distribution. The classroom instruction is correlated with the work experiences of the students. Some skills and concepts are common to the needs of all workers and this instruction is presented in group activities and class discussions. The students are helped to develop desirable business traits and valuable insight to business problems through sharing their on-the-job experiences.

The teacher-coordinator of distributive education is concerned with helping the student develop the ability to communicate effectively, to apply principles of art and design to merchandising, to perform clerical duties efficiently, to under-

stand principles of good marketing and merchandising, to get along well with employers and co-workers, to manage personal affairs efficiently, and to plan for further development and attainment of a satisfying career. The concepts of economics, mathematics, sociology, psychology, English, art, science and other studies are applied to the effective performance of distributive occupations.

Time is allotted for individual conferences and training sessions with individual students. Students receive supervision and guidance in the study of their specific jobs and in accordance with their individual career plans. The teacher-coordinator maintains a library of current instructional materials and prepares individual lesson assignments that are related to the needs of each student.

--AS A COORDINATOR IN THE BUSINESS COMMUNITY

A teacher-coordinator works closely with employers to plan a program of training for his students.

The teacher-coordinator works in the business community daily at a variety of interesting and challenging tasks. First, he must carefully select the business firms for which his co-operative part-time students, called student-trainees, will work. Only businesses that have high standards and can meet the rigorous requirements of his criteria are selected. He works closely with the employer in developing a plan of experiences for the student-trainee which will give the student a good background for a variety of distributive occupations. He works with the training sponsor (the student-trainees on-the-job teacher) to follow the progress of the student on the job, to relate job training to school instruction, and to evaluate the student's job performance. Through his calls on employers he finds out many interesting new things that he brings back to the classroom. He keeps informed on current business practices and business conditions which he shares with his student-trainee's as a part of their classroom instruction.

Most coordinators get a great deal of help and satisfaction from working with an advisory committee made up of representatives of management and employees from local business firms and representatives from the school. The committee counsels the teacher-coordinator on problems that he submits to them and the committee lends support when needed.

The coordinator often makes visits to the homes of the students to explain the program to parents and to better understand the needs and personality of the student. Occasionally the parents are called upon to help work out problems of adjustment to school or work.

--AS A CLUB SPONSOR

A very popular and valuable educational activity now being carried on in cooperative part-time programs is the Distributive Education Club. Usually the local club is affiliated with a state-wide organization of Distributive Education Clubs and the Distributive Education Clubs of America, a national organization, called DECA. Through participation in state and national conferences, students are given the opportunity to demonstrate

leadership and high standards of performance in distributive skills.

The teacher-coordinator's main responsibility in the club activity is to provide the initial impetus for getting it started, after which the operation is primarily the responsibility of the club members and their elected officers. Most coordinators are enthusiastic about the club as a learning activity. They feel that through the club they learn to know their students better and often discover talents that otherwise might have gone unnoticed. The club program affords the student an opportunity to plan and participate in social activities, civic projects, student-planned learning activities, and group membership. These experiences develop leadership and stimulate a professional attitude toward work. Thus, it helps the student to prepare for business responsibilities. Even though clubs sometimes entail extra work and responsibility professionally minded teachers feel that the club makes an important contribution to the the development of workers and citizens.

--AS A CITIZEN OF THE COMMUNITY

The teacher-coordinator plays an active role in community life. Through many out-of-school contacts with businessmen, parents, clubs and other groups, he has an opportunity to exercise his leadership abilities. Participating in civic affairs serves as a good public relations medium for the distributive education program.

The coordinator serves the general public by helping merchants provide better service to customers, lowering selling costs, and general upgrading of marketing and merchandising practices.

The coordinator serves the school by effecting closer cooperation between the school and the community. The school administration enjoys more contacts with local businesses and

homes, and experiences fewer criticisms from those who want practical courses offered in the schools.

The coordinator serves parents by helping their children make an effective adjustment to the responsibilities of adult life and achieve economic independence.

The coordinator serves employers in the careful selection and training of future full-time employees, upgrading those adready employed, and in reducing costly personnel turnover. Employers gain the goodwill of the community through cooperation with the school in preparing youth for employment.

Many times the coordinator is called upon to speak before civic groups to explain the program or to report the successes of students who have received the training. Coordinators are consulted and asked to help in the solution of community unemployment problems. There are many opportunities for the coordinator to bring his training and experience to bear on community activities.

--AS AN ADULT EDUCATION COORDINATOR

In large cities responsibility for evening school classes rests with one or more specialists whose duties are confined to adult education in distribution. Suburban teacher-coordinators may or may not have charge of this work. However, in most communities outside the metropolitan areas one of the teacher-coordinators has the responsibility for the administration of the adult distributive education program. This may include the direction of the entire adult education program--general education classes as well as those in the various vocational fields.

The adult distributive education program must be carefully planned if it is to be effective. First, training needs must be identified and thoroughly analyzed to make certain that the instruction reaches the proper people and provides the right kind of content. Usually a good coordinator conducts an occupational survey of the community which furnishes him with authentic information pertaining to training needs. Fortunately, when im-

portant decisions are to be made he can consult with members of his advisory committee of local business personnel.

Among the more important decisions the person in charge of the adult program makes are the selection of courses and the selection of capable instructors, who are experts in the field. Since most evening school instructors are successful businessmen who may not have had formal training in teaching methods the adult education coordinator or director is responsible for acquainting them with modern teaching methods. Most teacher-coordinators enjoy their association with the adult program and benefit from the experience.

--AS AN ADULT INSTRUCTOR

Teaching an adult class is optional for most teacher-coordinators, however many of them teach adult classes for several good reasons. They enjoy the extra income, of course; but more important, they learn while they teach. Adult education is seldom teacher-dominated, textbook learning. Through the exchange of ideas, everyone, including the instructor, benefits; thus the teacher-coordinator enriches his knowledge of his field. They also enjoy the friendships that develop with businessmen and the prestige of leading an adult class. Students in well taught adult classes are usually very appreciative of their instructor's efforts.

The people enrolled in an adult class have joined it because they have a desire to learn. It is up to the instructor to keep their interest alive and to help them achieve their objectives. Thus a good adult instructor understands his students; he knows specifically what they expect to derive from the course, and he learns to know them as individuals including their needs, tastes, and desires. He realizes that if his students are not comfortable, happy, and conscious of their progress toward their goals they will not return to class. Adult education is a challenge, but a real source of satisfaction.

WHAT ARE THE PROFESSIONAL TRAINING REQUIREMENTS?

--YOUR HIGH SCHOOL CURRICULUM

The high school curriculum of the prospective distributive education teacher-coordinator is not restricted to specific courses. He will find that some courses may be more helpful than others, but many of these can also be taken in college. A student who has been a distributive education student in high school has an excellent background for understanding the coordinator's job. Typewriting and bookkeeping, or the economics courses, would be valuable to success in the college program. Courses in math and science are not required but are desirable. The study of a language is optional. Since entrance requirements vary at different colleges, the student should check carefully, the requirements of the college he plans to attend to be sure his high school curriculum will meet these requirements.

--YOUR COLLEGE PROGRAM

Training Institutions. The institutions for training distributive education teacher-coordinators are designated by the State Departments of Education. For instance, in Minnesota, the University of Minnesota is the only institution so designated at the present time, however, St. Cloud State College offers a program that prepares teachers to teach the distributive subjects. A student can enter the University of Minnesota College of Education as a freshman from a Minnesota High School if he is in the upper sixty percent of his graduating class, or he may choose to spend two years in the liberal arts college or a junior college and then transfer to the College of Education for the last two years.

Program The student takes at least 18 quarter-hours in technical distributive subjects, such as marketing, retailing, advertising, display, and salesmanship, in addition to the required courses in business administration and economics. The special professional education requirement is 12 quarter-hours in approved professional education courses. These requirements are subject to change from time to time and vary in different states. Preparation for teaching distributive subjects without coordination of a cooperative program, includes the same technical

courses but may vary in the professional courses taken.

Costs of Training. Educational costs for training as a distributive education coordinator may vary with the institution. but even then will likely be no more than the regular tuition plus incidental fees, as established by the institution for all students.

--YOUR BUSINESS EXPERIENCE

Most states require a minimum of two year's experience and employment in a distributive occupation. It is possible to meet this requirement while attending school through part-time work. The position held and the types of experience gained contribute to the qualifications for a teacher-coordinator position and the ability to relate classroom learning to the practices students encounter on the job. The most valuable business training is a position in which one receives training in the various functions of merchandising, such as selling, display, stockroom operation, unit control, pricing, etc., and one in which he has some exposure to the problems of management, buying, and store operation. In some cases provisional certificates are given when the teacher-coordinator applicant has less than the minimum requirement, on the condition that additional hours of approved occupational experience will be obtained within a given period.

EMPLOYMENT OPPORTUNITIES FOR DISTRIBUTIVE EDUCATION TEACHER-COORDINATORS

Now that you understand the nature of the teacher-coordinator's work and know something about professional training requirements you will be interested in the employment opportunities in the field--questions such as:

How does one enter the field?
What is the demand for teacher-coordinators?
What about stability of employment?
How much do teacher-coordinators earn?
What are the working conditions?

HOW DOES ONE ENTER THE FIELD?

Certification requirements. The teacher-coordinator must be a graduate of an accredited college or university with a degree in distributive education or must have completed a sequence of courses approved by the State Department of Education in the state where he wishes to teach. Then too, he must have had two (or more) years of work experience in distributive occupations, depending on the requirements of the particular state in which he is to be employed. Requirements vary from state to state but will fall into somewhat the same pattern.

Job placement. A qualified teacher-coordinator may find employment in a number of ways. He may register with the placement bureau of the college from which he graduates or with the State Department of Education which usually has an employment service for teachers. He may also learn of opportunities from people in the field of distributive education, such as the state supervisor or a college advisor. Some candidates make inquires directly to a school administration for which they would like to work. Most placements are made through the college placement bureaus.

WHAT IS THE DEMAND FOR TEACHER-COORDINATORS?

Educators are becoming increasingly dedicated to the principle that our schools must provide for the needs of all youth regardless of occupational objective. The general attitude seems to be that every youth has the right to try to become an expert in any field he chooses--no closed doors. Dr. James B. Conant, the renowned educator and scientist, said in his book, The American High School Today, that distributive education should be available in high schools where the community is willing to provide work experience for students. With this philosophy being voiced by leading educators, and the fact that distributive education is growing steadily, there are good reasons to believe that there is a promising future for qualified teacher-coordinators in the field.

Enrollments for the year ending June 30,1962 in Federally reimbursed distributive education cooperative part-time and adult classes were over 321,000 as compared to approximately 36,000 in 1938. During this 24-year period the cooperative part-time pro-

A teacher-coordinator counsels individual students in career planning and specific training needs.

gram has increased 1200 percent. The program did not "mushroom", but enjoyed a steady growth. There are about 2500 schools offering federally reimbursed distributive education courses with going programs in all of the fifty states. This steady growth in the numbers enrolled at the high school level and in other public schools offering distributive education courses, together with the increasing percentage of the gainfully employed in distributive occupations, indicates that there will be an increased demand for teacher-coordinators. In a United States Department of Labor publication, Manpower--Challenge of the 1960's, we are told that the number of people employed in distributive industries will increase more rapidly than the total number of people employed in all occupations for the next ten years.

In a recent survey on the needs for an expanded program in education for distribution, conducted by the National Association

of State Supervisors of Distributive Education, it was indicated that a major need was for personnel in all phases of distributive education. In the period between 1960 and 1970, the number of high school programs should be doubled—with an anticipated need for over 1000 more coordinators of high school cooperative distributive education programs. The number of post-high school programs are expected to increase 500% with a need for approximately 400 additional coordinators.

Thirty-two states have stressed the need for more qualified personnel. This includes state department staff, itinerant teachers, coordinators, and supervisors. The qualified teacher-coordinator of distributive education will have a wide choice of geographical location and opportunities for advancement in the field.

The "Vocational Education Act of 1963" provides for pre-employment classes in distributive education and will create an additional demand for teachers of distributive subjects, or pre-employment classes in addition to the cooperative part-time programs.

HOW MUCH DO TEACHER-COORDINATORS EARN?

The teacher-coordinator's salary is determined by the local school system for which he works. Normally he will be on a salary schedule set up by the local administration with adjustments made for additional time required by the program. Most schools provide an extra two weeks or month of employment for coordination activities that are necessary before school starts and after it has ended. Beginning salaries for distributive education teacher-coordinators in 1964, in the State of Minnesota, ranged from $5000 to $7400, without counting compensation for coordinating the evening school program or teaching adult classes. Annual salaries may vary with the amount of education, distributive occupations experience, and other factors, depending on the local school policy.

The following chart shows the average salary, the number of positions listed, and the number of graduates without experience

eligible for those positions for a recent five-year period, in the State of Minnesota. The chart also shows how average entrance salary for distributive education graduates compares with average entrance salary for other secondary education graduates.

ENTRANCE SALARIES
FIVE YEAR COMPARISON
Distributive Education Graduates and All Secondary Education Graduates
University of Minnesota

School Year	No. of D.E. Graduates	No. of D.E. Positions	D.E. Average Entrance Salary	Secondary Education Average Entrance Salary
1958-59	12	41	$4724	$4370
1959-60	5	31	4883	4565
1960-61	9	49	5210	4600
1961-62	7	70	5375	4932
1962-63	7	59	5860	5056
1963-64	9	*	6000	*

* At the time of this printing the total number of D.E. positions and the average entrance salary for all secondary education graduates had not been completed. It is important to note that all of the nine 1963 - 64 graduates had accepted positions by the middle of April, 1964.

Of course persons with Master's degrees and people with teaching experience were placed at much higher salaries. Career oriented educators should plan on earning a Master's degree within two to five years following graduation. The following figures indicate the range and average annual salary of a group of fifteen coordinators in the State of Minnesota for the 1962-1963 school year.

AVERAGE ANNUAL SALARIES FOR FIFTEEN COORDINATORS IN THE STATE OF MINNESOTA, 1962-1963

	0-5 years experience	6 years or more of experience	entire group	(Most of this group was employed for 42 weeks. The average number of years of experience for the entire group was 7.4 years.)
Average Salary	$7,599	$9,019	$8,309	
Salary Range	$5,145-9,946	$8,300-9,946	$5,145-9,946	

Many coordinators earn additional income for administration of the adult education program and teaching of adult classes.

WHAT ABOUT STABILITY OF EMPLOYMENT?

As the large elementary school population reaches high school, many shortages will exist in our educational system. A shortage of teacher-coordinators will likely exist for some time to come as a result of the population explosion and the expansion of distributive education into new schools both on the high school and the post-high school or junior college level. Coordinators have not been faced with lack of employment opportunities, and the increased awareness of the need for specialized preparation for entry into the job market by educators and businessmen makes the future look promising.

WHAT ARE THE WORKING CONDITIONS?

A D.E. classroom is equipped with a model-store unit where students practice the skills used in their jobs.

Most of the large "comprehensive" high schools built during the last decade have provided a special distributive education classroom designed for distributive education learning activities. Many schools have made sizeable investments installing model stores, display areas and other equipment necessary for teaching the distributive education courses. This equipment adds realism to the classroom learning experiences. Proper equipment makes the teacher-coordinator's job more productive, more interesting, and more satisfying, as he can more readily see the results of his efforts. The coordinator usually has an office adjoining the classroom where he counsels with students.

A teacher-coordinator has a wonderful opportunity to meet many people in the community because his coordination activities take him into the homes of his students and into the businesses in the community. The combination of part-time in the classroom and part-time in the business environment provides a variety of experiences and personal contacts. The outside calls on business firms and homes of students also afford the teacher-coordinator a certain amount of physical activity and the opportunity to be out-of-doors. He gets to know the community well and becomes informed on community activities and business conditions.

WHAT ARE THE PERSONAL SATISFACTIONS?

The occupational success and the accomplishments of the student-trainees is a major source of satisfaction in the teacher-coordinator's job. As a student-trainee becomes more efficient and skilled he will progress to positions of greater responsibility. It is rewarding to the teacher-coordinator to see his students develop skills, understandings, and attitudes that will contribute to successful living. By nature of the close association the coordinator has with his students, he gets to know them better than do most teachers. As a result, he becomes more involved with what they are doing both in and out of the classroom. Students are grateful for the training that has helped them realize success in their career field. Usually the teacher-coordinator is kept informed on the accomplishments of student-trainees long after they have completed the school distributive education program.

An effective teacher-coordinator contributes to the success of a business community. The results of good training of dis-

tributive workers are profitable business operation and satisfied customers. The coordinator often helps to set high standards for efficient distribution and thereby enjoys the high regard of busnessmen and citizens in the community.

OTHER FIELDS OF EMPLOYMENT OPEN TO DISTRIBUTIVE EDUCATION TEACHER-COORDINATORS

The high school distributive education coordinator can advance to many positions in the distributive education field. With the increasing number of junior colleges and technical-vocational schools offering distributive education programs and courses, there is a need for teachers and coordinators at the post-high school level. Universities and colleges employ teacher-educators and instructors to prepare future teacher-coordinators. For the person who likes to travel, there are field instructor opportunities, where a person moves from one location to another giving short courses in distributive subjects needed in different communities. With the exception of a few states, there are opportunities to advance to the position of State Supervisor of Distributive Education, and in some cases assistant supervisors are employed. Large cities employ supervisors or consultants to supervise a number of programs operating in the same trading area. A coordinator may also find opportunities with the U.S. Office of Education as a program specialist or research worker.

The training and experience of a distributive education teacher-coordinator qualifies him for a variety of other fields of employment, both in education and business. Some coordinators have chosen to go into school administration, having had valuable administrative expereince in the operation of the distributive education program. Counseling and guidance of individual student-trainees serves as an excellent background for a position in counseling and guidance. A number of coordinators have taken positions as public relations directors or business managers for the schools after having gained related experience as a coordinator.

The college preparation and training of a distributive education teacher-coordinator is much like the preparation for a career in business administration. In the business world, the distributive education teacher may find opportunities for which he qualifies in sales

management, personnel management and training, or store operation. Many coordinators have been offered excellent business career opportunities through their contacts with businesses and employers.

PROFESSIONAL ORGANIZATIONS

People in all fields of education participate in professional organizations which are established for the betterment of the teaching profession. The teacher-coordinator will likely be a member of several such organizations. On the local level, this might include a chapter of a state or national education association which includes educators from many fields. In larger cities there are professional organizations of business teachers and vocational teachers; and coordinators often are members of guidance organizations because of the coordinator's role in vocational guidance.

National professional organizations include the National Education Association, The American Vocational Association, The National Business Education Association, and The National Association of Distributive Education Teachers. These organizations also have state affiliated associations so that there are many opportunities for active participation and professional growth among members.

Professional organizations offer the teacher-coordinator an opportunity to participate in conferences and meetings that are related to his field. The various organizations sponsor speaker programs whereby members have many opportunities to gain new ideas and information from outstanding leaders in education and business. Members may take part in research projects and contribute articles to be published in the journals sponsored by these organizations. Through a professional organization a teacher-coordinator enjoys a close association with other members of the profession and gains many new ideas he can utilize in his work.

SUPPLEMENTARY INFORMATION

One of the best ways to learn more about a career field is to talk to people working in that field. Talk with a Distributive Education Coordinator. Write the State Supervisor of Distributive Education in the State Department of Education of any of the states, or contact the U.S. Office of Education, Occupations Branch, Washington 25, D.C. Many universities, particularly state universities, offer distributive education teacher-preparation programs, and are able to supply specific information about requirements and training in their respective institutions.

INTRODUCTION

The Vocational Education Act of 1963 opened up new horizons for vocational-technical education. Already many Michigan schools have developed new, expanded, or improved programs for preparing youth for employment in wage-earning occupations. It is important that these programs prepare youth for existing jobs and that schools use every available means for determining the location and extent of employment opportunities for young workers.

One of the commonly used methods of locating job opportunities for young workers is through follow-up studies of former students. These studies will indicate the kinds of jobs found by former students and their locations. This publication was prepared to provide guidelines for the planning and carrying out of such studies.

Schools having reimbursed preparatory or cooperative programs will be asked to provide the Division of Vocational Education with certain information relating to former students who were enrolled in these two types of programs. Each September suggested follow-up sample forms will be mailed to schools having preparatory and cooperative programs for obtaining the following information about last year's graduates and drop-outs:*

1. Course title
2. Total number of students who completed program requirements, male and female
3. Number not presently available for placement:
   a. Entered armed forces
   b. Continued full-time school
      (1) Unemployed
      (2) Employed part-time
4. Number employed and/or available for employment
5. Number employed full-time:
   a. In the occupation for which trained
   b. In a related occupation
   c. In a non-related occupation
6. Number employed part-time (and not in school)
7. Number unemployed (and not in school)
8. Number whose employment status is unknown
9. Number who left prior to normal completion time with marketable skills

The above information will be asked for on separate forms for all reimbursed programs of vocational education and will be compiled by the State office staff to be forwarded to the U. S. Office of Education.

Alexander J. Kloster
State Superintendent

*See sample follow-up study form in Appendix.

GUIDELINES FOR CONDUCTING FOLLOW-UP STUDIES OF FORMER VOCATIONAL AND TECHNICAL EDUCATION STUDENTS

Initiating a Follow-Up Study

Carrying out a follow-up study successfully requires careful planning. Much more is involved than simply developing a follow-up form and mailing copies to former students. A first step should be to consult with other staff members who will use the tabulated results and give them an opportunity to contribute items to the form which will enable them to evaluate course content, instructional methods and techniques, and other aspects of instruction, counseling, placement, and administrative activities. Staff members who are involved in a follow-up study from the planning stage to the tabulation and interpretation of the results are more likely to take seriously any suggestions from former students which point to a need for instructional or other changes or improvements in their programs.

Likewise, students should be informed of the school's plans to follow-up systematically vocational-technical graduates as well as those who drop out. This orientation of students should start two or more years before they are scheduled to graduate in order to impress upon them the value of such studies in program improvement, and the urgent need for each to complete and return the follow-up questionnaire to the sending school. Obviously, the greater the percentage of returned follow-up forms the more reliable will be the results.

In addition to verbally informing students about the follow-up plan, many schools have found it profitable to invite students to study the form and make suggestions which make it more functional. There is usually a direct positive correlation between the extent to which students are acquainted with the form, especially the questions it will ask, and the percentage of usable responses. Since this bulletin is concerned with the follow-up of vocational-technical students, the orientation of students should be done by the person responsible for the follow-up activity or by vocational education teachers. It is recommended that follow-up of vocational education oriented students be carried out separately and apart from any general follow-up studies the school may make. This will permit the questionnaire to be of shorter length and thus will attract a greater percentage of responses.

Supervising the Study

The several related activities which comprise the follow-up process require that some one individual have general supervision of the project. This person should be thoroughly familiar with the purposes of the study and with the techniques to be employed in carrying out each step. The major activities requiring coordination, leadership, and supervision are:

1. Establishing the general and specific objectives of the study.
2. Determining the scope and methods.
3. Selecting the graduated classes to be studied.
4. Preparing the mailing list.
5. Estimating costs and time requirements.
6. Preparing the follow-up form.

7. Gathering, tabulating and reporting the data.
8. Interpreting the data.
9. Preparing the follow-up study report.

Functions of a Vocational-Technical Education Follow-Up Study

An important function of the secondary school is to provide occupational preparation for varying percentages of its students. The instruments and procedures commonly used in a follow-up study of former students will provide information basic to continuous appraisal of the program of vocational-technical education, and should indicate curriculum areas needing revision, modification or expansion. They will provide, also, means of appraising certain practices and techniques employed by the school for the purpose of insuring high quality occupational preparation for students and improved occupational adjustment of these young workers. The introduction of new practices or techniques may be suggested, and these in turn can be subjected to continuous evaluation through use of later follow-up studies. Moreover, the facts gathered will be particularly useful in acquainting the community with changes needed in the school's vocational-technical education program, and as a source of material for the public information program.

Some of the specific purposes of a follow-up study of former vocational-technical students are these:

1. To determine the number and kinds of employment opportunities available to young workers in the local and regional labor market.
2. To discover the occupational difficulties encountered by former vocational education students.
3. To accumulate information useful in counseling and placement.
4. To discover the types of assistance youth utilize in obtaining employment.
5. To discover the extent of occupational mobility among former students.
6. To learn the extent of employment opportunities for young workers in various businesses and industries in the local community and region.
7. To learn the uses which former vocational students have made of their job training.
8. To obtain information about post-secondary school occupational training opportunities which former students have utilized.
9. To study such factors concerning former vocational students as:
   a. Occupational stability and adjustment of graduates as compared with drop-outs.
   b. Length and frequency of periods of unemployment of former students since leaving school.
   c. Need for job placement or re-placement services by former students.
   d. Need for further counseling or training to improve employment stability.
   e. Opinions and judgement of former students with respect to the adequacy of the vocational-technical education program.
   f. Stability of vocational interests as expressed or measured while in the vocational-technical education program.

While these objects represent only some of the many specific ones common to follow-up studies, they serve to illustrate the detailed purposes of such studies.

Planning a Follow-Up Study

It has been suggested above that the planning of a follow-up study of school-leavers should involve all vocational education teachers even though the carrying out of the process may be assigned to a designated member of the staff. If the vocational staff is too large to attempt to operate as a planning committee, each vocational field should have at least one representative involved in the planning. Each committee member should invite his colleagues to contribute suggestions and questions as the procedures and questionnaire are developed. When the follow-up form is roughed out, each vocational instructor should be given a copy for review and recommendations. Not until this is done should the form be considered ready for the final draft.

Establishing the Purposes of the Study

The follow-up questionnaire should not be started until the following four questions can be fully and satisfactorily answered:

1. What information do we want about each former vocational student?
2. What items or questions will elicit the desired information?
3. Will the information obtained in response to each item or question lend itself to usable tabulation?
4. Of what specific value will each item of information obtained be to the school in light of the stated purposes of the study?

The specific purposes listed under the heading, Functions of a Vocational-Technical Education Follow-Up Study, should be recognized as incomplete. Neither should the sample follow-up form in the Appendix be considered complete. Both the sample form and the list of purposes of follow-up studies are intended only to be suggestive.

Determining the Scope of the Study

Before developing the follow-up questionnaire, the group to be included in the follow-up study should be decided upon. The study should be confined to former vocational education students in preparatory and cooperative vocational programs. Drop-outs should usually be followed-up along with the class with which they would normally have graduated.

Deciding upon the number of former students to be contacted and whether by mail, telephone or personal interview, or by a combination of these methods, is necessary before the cost of the study can be estimated. The scope of the information to be sought from each respondent should likewise be determined before beginning to develop the questionnaire.

Planning the Follow-Up Method

In many follow-up studies a combination of personal interviews, telephone interviews and mailed questionnaires are employed. Though it may not be feasible to interview personally all former students living in the local community, it is desirable to interview a reasonable number. One of the values of this procedure is the "trial run" experience gained with the questionnaire. Personal interviews often reveal weaknesses of the questionnaire such as, questions which former students misinterpret or which do not elicit sufficient information. Since mailed forms cannot be interpreted for recipients, it is important that they contain clear, concise items in order to assure uniform interpretation by all respondents.

Preparing the Mailing List

The first step in preparing a follow-up study of the previous years' vocational-technical education graduates and drop-outs is assemblying a complete mailing list. In the Preface the reader will find described the types of classes and the detailed information which the Division of Vocational Education must compile from all reimbursed preparatory and cooperative programs and forward to the U. S. Office of Education. Every reasonable effort should be made locally to establish contact with former students and encourage them to provide the requested information concerning their employment status as of October 1 in the year following their leaving school.

Locating Former Students

While the school's records will likely provide current addresses of many graduates of the previous year, some will not be located through their last known address. Some sources of unknown addresses of former students are:

1. Students now in school
   Relatives and friends of former students who are now in school may be able to provide correct addresses of some potential respondents. A list of persons whose present addresses are unknown might be prepared and presented to students by their teachers. Usually the plan of attempting to obtain such addresses by posting lists on school bulletin boards gets only scattered results.

2. Parents
   Parents of former students living in the local community are usually the best source of information. A number of high school students might be designated to obtain addresses of former students from parents by telephone.

3. Other former students
   Former students living in the local community are frequently in touch with former classmates now living in other communities. If a formal alumni organization exists, its members can usually be depended upon to assist in securing addresses of former students.

4. Former employers
   Local ex-employers of former students are often helpful in locating former students. School records will often contain information concerning part-time and vacation employment of former students and thus provide the names of the former employers.

5. Community organizations
   Former students known to have participated in the activities of community organizations may be located through those organizations. Religious, civic and student organizations are examples of groups likely to know the present addresses of former students.

6. Public employment offices, former co-workers and persons who are known to have been associated with former students in some connection should not be overlooked as possible sources of information about addresses of former students. Every source of potential information should be explored before the current address of a former student is marked off as unavailable.

Estimating the Cost of the Study

The clerical services needed in carrying out a follow-up study can often be obtained through business education classes at no cost to the school. The tasks of preparing mailing lists, mailing forms and tabulating returned questionnaires usually require more time than the regular school office staff has available. The cost of supplies and mailing is nominal.

Experience in previous follow-up studies indicates the desirability of printed follow-up forms over Mimeographed ones. The added prestige of the printed questionnaire is likely to bring a greater percentage of returns than when Mimeographed. The additional cost of printing will be partially offset by the lesser number of repeat-letters required for getting questionnaires returned by respondents. The usual cost of postage will be ten cents, including a self-addressed, stamped envelope with each questionnaire mailed. The total cost of the study, including repeat mailings and printing usually does not exceed fifteen to twenty cents per former student.

Setting Time Limits

An essential part of the planning of a follow-up study is the setting of a deadline for the return of questionnaires by respondents. Several days before the deadline is reached, repeat questionnaires should be sent to those former students who have not returned the completed questionnaire. Usually a second repeat request brings little results.

Preparing the Follow-Up Form

The content and length of the follow-up form will be conditioned by the purposes of the study. The task of preparing forms may be assigned a planning group, or it may be prepared by the study coordinator and then reviewed by a committee or staff. In any event, the actual formulation of the items to be included should be based upon the information desired and the uses to be made of it.

Some general rules to be observed in preparing the follow-up form are the following:

1. Keep items as brief and concise as possible.
2. Require respondents to do a minimum of writing. Provision for replying through use of check marks should be made when possible.
3. Where written replies are required, provide adequate space.
4. Provide a space for the former student's signature on the follow-up form. Check off each student's name as his returned questionnaire is received.
5. Avoid unnecessary items. Do not include items for the reason that the information obtained "might be useful."
6. Keep in mind that there is usually an inverse ratio between the length of the form and the percentage of returns.
7. Set a deadline date for returning the questionnaire.

In addition to the follow-up form, a cover letter should be prepared to accompany each one mailed. A Mimeographed cover letter will suffice with the original mailing. Repeat requests should be accompanied by a personal letter from the principal, follow-up coordinator, or a vocational teacher who knows the former student well. A sample cover letter is included in the Appendix.

Gathering the Follow-Up Information

The data-gathering process by mail is a relatively simple one if the study has been carefully planned from the beginning. Be sure that names and addresses of former students are correct in every detail and that the follow-up form is properly designed to obtain the information which will achieve the purposes of the study.

Respondents who have not returned the questionnaire within two or three weeks should be sent a second one accompanied by a personal letter urging immediate action. A third appeal should be resorted to sparingly and then only if there is reason to believe it will produce results.

Except for testing the follow-up form on several former students in the local community, follow-up by personal or telephone interview is usually not practicable. The interview method should usually be confined to known former students in the local community who have not returned the printed questionnaire within a reasonable period of time.

Tabulating the Data

If responding former students are identified by name on the returned questionnaire, they should be checked off the master mailing list as their returns are received. A plan for tabulating individual responses on an item-by-item basis should have been developed by the time returns start coming to the school. Tabulation will be less difficult for checked items than for those which require written replies. However, items requiring essay-type responses should not be entirely ommitted in the interest of ease of tabulation if more meaningfulinformation will result from written replies.

Since some of the information obtained through the follow-up study will have greatest significance when reviewed along with the former student's high school record, the cumulative folder of each former student included in the study might be set aside in a separate file for use in data interpretation. Possible interpretations presented under the topic, Interpreting the Data, will suggest the need for studying the high school records of respondents in relation to the data contained on the follow-up questionnaire.

Interpreting the Data

The examples of data interpretation below are intended only as illustrative. With the exception of the follow-up items which will provide data required by the Division of Vocational Education for its report to the Office of Education, follow-up questionnaires will vary from school to school.

The major value of a follow-up study lies in the interpretation and use of the information obtained. It is assumed that the follow-up questionnaire will have been planned to secure information from former students for specific purposes. The information obtained should either suggest ways of improving the school's vocational-technical education program or it should confirm the adequacy of the existing program.

Since the majority of high school graduates and drop-outs terminate their formal education upon leaving high school, every effort should be made to learn of their needs and develop a vocational education program which will prepare youth to become gainful workers.

Listed below are four categories of information often sought in follow-up studies of former students. Under each are suggestions relating to possible interpretation.

1. Present employment status. In this area, information is usually sought concerning the kind of job held, earnings, degree of job satisfaction, means by which the job was obtained and its relation to the individual's interests and job preparation while in high school. It may be found that an excessive number of former students who followed a program of occupational preparation while in high school are actually finding jobs in unrelated occupations or are unemployed. Does this finding suggest too many are being trained in the occupational field concerned? Does the school know how many job opportunities are available in this field each year? Is the training inadequate for the jobs available? Are the jobs found which are unrelated to training more in line with individual interests as expressed in high school than those for which they received training? If so, should the school improve its vocational guidance and counseling services? Does the school need a placement service? If so, what community resources are available for assisting the vocational department placement service?

   The places of present employment of former students will indicate the occupational mobility of individuals and of the group. Are they leaving the local community for employment elsewhere? If so, why? Are they finding jobs in other communities comparable in nature and earnings to jobs existing in the home community? If the answer is in the affirmative, why are they? Does the school and cooperating agencies have current information on job opportunities in the local community?

   These are a few of the many implications arising out of responses of former students. The questions above refer primarily to graduates. The inferences which may be drawn from the replies of drop-outs may be even more significant. Their reasons for leaving school may point directly to the limitations of the vocational education program or to lack of effective vocational guidance and counseling.

2. The area of further training. The successes and failures of former students who enter technical or business schools, apprenticeships, on-the-job training or other job training situations will usually suggest ways of making the vocational education and vocational guidance counseling programs more effective. Though not always the case, failures of former students in the above areas may point to the need for strengthening or expanding the program of vocational-technical education at the high school level.

   It may be found that some former students are obliged to seek further pre-employment training to qualify for jobs even though school authorities may consider the in-school vocational program adequate. It may also be found that the greatest number of available jobs above the unskilled level are in occupational fields in which the schools offer no training. Properly stated items in the follow-up questionnaire should serve to point out the strengths and weaknesses of the school's occupational training program.

3. The area of occupational interests. The present employment of former students might be profitably checked against any information in school records relating to the expressed or measured occupational interests. If tested interests are available for most students and are reasonably predictive of future occupational role, counselors should be urged to make the results available to vocational education teachers. If, as suggested earlier, measured interests are reviewed along with student's post-school occupation, some indication of their predictive reliability can be gained.

4.. The significance of other areas. The areas mentioned above serve only to suggest some of the kinds of information which might be sought through follow-up studies. The types of information to be obtained from school-leavers will be determined in each scool by the purposes of the study. These purposes must be established before beginning the preparation of the follow-up questionnaire.

Follow-up studies can be helpful in evaluating aspects of the school curriculum which enroll vocational education students and bear upon the effectiveness of the occupational training program. Certainly if the school's curriculum is directed primarily at college preparation, a majority of graduates should properly be expected to have entered college. If, on the other hand, a majority of former students will be seeking employment upon leaving high school, provision should be made for fully meeting needs of students for vocational-technical preparation. Again, if the follow-up study reveals that appreciable numbers of vocational education graduates are employed in the local community, there may be a need for supplementary training or retraining for this group.

Preparing the Follow-Up Study Report

The report of the study is essential to the implementation of its findings. It should be written in a manner readable to lay persons as well as teachers, administrators and students. It should include a clear, concise statement of the purposes for which it was made and some description of the procedures followed in planning and carrying out the study. The report should present a tabulated summary of the completed study so that readers may better understand the basis upon which interpreted conclusions were drawn.

A statement of the implications of the study should be included together with recommendations concerning the action necessary to carry out those implications.

A P P E N D I X

SAMPLE LETTER TO ACCOMPANY FOLLOW-UP QUESTIONNAIRES SENT TO FORMER VOCATIONAL-TECHNICAL EDUCATION STUDENTS

Date_____

Dear_____

The Vocational Education Department of _____ High School is asking all former students of last year's class to fill out and return the enclosed brief questionnaire. Please answer the questions as they apply to your employment status on October 1, 196_.

We want to expand and improve our vocational program as rapidly as possible, but we want to do it knowing that we are making the right changes. By learning which of our former students are being most successful in obtaining employment in jobs for which they received vocational training, we can plan our future program more intelligently.

We have kept the enclosed follow-up form as brief as possible and have provided check spaces whenever possible to reduce written answers to a minimum. The information we receive from you will be treated confidentially. If there is anything we can do to help you, please let us know. We will look forward to the return of your questionnaire.

Sincerely,

P.S. Please return your completed questionnaire as soon as possible but no later than October 15. Whether you graduated from _____ High School or not, we are anxious to have your reply.

SAMPLE FOLLOW-UP STUDY FORM

Name_____ Address_____

City_____ State____ _____

1. I am not presently available for employment because:

   a. Continued full-time school to take training in the field of_____
   _____

      (1) Employed part-time while in school? Yes_____ No_____

   b. Entered armed forces? Yes_____ No_____

   c. Not employed because_____

2. If presently employed full-time, are you:

   a. In the occupational field for which trained? Yes_____ No_____

   b. If not, are you employed in a related occupation? Yes_____ No_____

3. If employed part-time, in what occupation?_____

4. If unemployed, are you seeking work? Yes_____ No_____

5. If you left school before completing the training program you were enrolled in, did you find employment in the occupational field for which you were training? Yes_____ No_____

Answers to the above questions will provide the Division of Vocational Education with the information needed for reporting the employment status of former vocational-technical students to the Office of Education.

Other questions designed to obtain evaluations of former students relating to the vocational-technical education program, in whole or in part, may be added if the local school wishes. It should be recognized that the shorter the follow-up questionnaire, the greater percentage of returns will likely be received. The singular purpose of this publication is to assist local vocational-technical education personnel to follow-up former students with particular emphasis upon the employment status of graduates and drop-outs in preparatory and cooperative education programs.

What's Happening to Colorado's Vocational Agriculture Graduates?

Colorado State Board for Vocational Education, Denver. Agricultural Div.
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 63 8p.

*VOCATIONAL AGRICULTURE; *HIGH SCHOOL GRADUATES; *VOCATIONAL FOLLOWUP; *GRADUATE SURVEYS

Questions regarding the curriculum emphasis in vocational agriculture and the availability of job opportunities in agriculture, in light of the declining number of farms, prompted a state followup of vocational agriculture graduates. Graduates of 1958 and 1963, 846 former students, were surveyed to determine their current occupational status. The findings revealed that, for the 1958 group, none of those available for employment was unemployed. Employed were 47 percent in production agriculture, 14.3 percent in off-farm agricultural occupations, 19.1 percent in occupations related to mechanical skills, and 19.5 percent in non-agricultural, non-mechanical occupations. Of the 1963 graduates, 2.1 percent were unemployed, 37 percent were in college, and 53 percent were available for employment. Of those employed, only 4.3 percent were in non-agricultural occupations while 75 percent were in agricultural occupations. Plans were established to gather data each year on the current class and the class which had been out of school for 5 years in order to identify trends which may have implications for curriculum planning. FOREWARD

* * * * * * * * * * * * * * * *

Much concern has been expressed in recent months about the need for and the value of vocational agriculture education. The decline in numbers of farms has caused people generally to question the emphasis now placed on agriculture education in rural schools. Questions have also been raised about the job opportunities which might be available for graduates of vocational agriculture programs at the high school level.

In order that the answers to these and many other questions concerning the vocational agriculture program be more readily available to interested persons, the State Board for Vocational Education inaugurated a continuing follow-up study to determine the employment status of vocational agriculture graduates.

This explanation of this study, its findings and implications, are summarized in this report.

Sincere appreciation is due the Colorado vocational agriculture teachers for their cooperation in making this a complete study. Every school now offering vocational agriculture in Colorado participated in the study, and only 10 boys out of a total of 846 graduates were listed under the heading "occupation unknown."

It is hoped that a continuing study conducted annually for the current year's graduates, and the class of 5 years previous will establish trends which may be used in program and curriculum planning.

* * * * * * * * * * * * * * *

INTRODUCTION

* * * * * * * * * * * * * * *

This study is the first of an annual attempt to determine the occupational status of graduates of vocational agriculture programs in Colorado High Schools.

Every high school in Colorado now offering vocational agriculture surveyed their 1958 graduates and their 1963 graduates to determine their occupational status.

In December of 1964, a similar survey will be made of the 1959 and 1964 graduates. This procedure will be continued annually for the purpose of compiling data which may be helpful in determining job opportunities for graduates as well as program and curriculum changes. Data for this study was gathered by questionnairs mailed to all vocational agriculture teachers in the State. One hundred percent response was received on both the 1958 and 1963 graduating classes.

Although data from a continuing study of this kind becomes more valuable when compared with previous years, it was felt that the findings of this year were significant enough to publish without the benefit of previous studies.

It is interesting to note that the findings of this study are similar to those found in other states.

THE OCCUPATIONAL STATUS OF THE 1958
GRADUATES IN DECEMBER OF 1963

TOTAL 1958 VOCATIONAL AGRICULTURE GRADUATES.....412

1. NOT AVAILABLE FOR EMPLOYMENT.....119

Armed forces.....66
Enrolled in colleges of agriculture.....19
Enrolled in colleges other than agriculture..22
Sick or deceased..... 7
Unknown..... 5

2. AVAILABLE FOR EMPLOYMENT..... 293

Employed in ranching and farming.....138
Employed in other agricultural occupations.. 42
Employed in occupations requiring
mechanical skills... 56
Employed in non-agricultural occupations.... 57
Unemployed.....None

NOTES OF INTEREST:

Perhaps the most significant finding of this study is the fact that none of those who were available for employment were unemployed.

47 percent of those available for employment were engaged in production agriculture.

14.3 percent of those available for employment were engaged in off-farm agricultural occupations.

19.1 percent of those available for employment were engaged in occupations which required a mechanical skill. These occupations included: Carpentry, electricians, welders, mechanics, heavy duty operators and plumbers.

Only 19.5 percent of those available for employment were engaged in non-agricultural and non-mechanical occupations.

Of the 42 that were employed in agricultural occupations other than farming and ranching -

13 were in agricultural professions (teaching, forestry, agronomy, etc.)
26 were in agri-businesses such as: livestock markets; farm equipment sales and service; feed, fertilizer and chemical sales; food processing and feed processing.
1 was in the Peace Corps
1 was an artificial inseminator
1 was a Dude Ranch employee.

THE OCCUPATIONAL STATUS OF THE
1963 GRADUATES IN DECEMBER OF 1963

TOTAL 1963 VOCATIONAL AGRICULTURE GRADUATES.....434

1. NOT AVAILABLE FOR EMPLOYMENT.....202

Armed forces 37
Enrolled in colleges of agriculture.....83
Enrolled in colleges other than agriculture..77
Unknown..... 5

2. AVAILABLE FOR EMPLOYMENT.....232

Employed in farming and ranching.....138
Employed in other agricultural occupations.. 36
Employed in occupations requiring
mechanical skill.... 43
Employed in non-agricultural occupations.... 10
Unemployed..... 5

NOTES OF INTEREST:

Three of everyfour of those available for employment were engaged in an agricultural occupation.

Only 2.1 percent of those available for employment were unemployed.

37 percent of all graduates were enrolled in college the first term following graduation from high school.

53 percent of all graduates were available for employment immediately following graduation from high school.

Only 4.3 percent of those available for employment were engaged in non-agricultural and non-mechanical occupations.

* * * * * * * * * * * * * *

SUMMARY

* * * * * * * * * * * * * *

It appears that vocational agriculture in Colorado is passing the test of placing its students in occupations for which they are trained. The primary objective of training present and prospective farmers continued to be valid in the light of the annual need for trained farm operator replacements and the continuing educational need throughout the active careers of our present farm people. In addition to this primary responsibility, the training received in vocational agriculture is evidently providing training that is valuable for entry level employment in occupations related to farming and for a large number of other mechanically oriented occupations. This indicates that the agricultural mechanics that is taught as part of vocational agriculture programs is contributing to employment in many occupations.

The findings of this study would indicate that vocational agriculture is doing its share to meet the challenge of jobless youth. The fact that none of the 1958 graduates and only 2.1 percent of the 1963 graduates, who are available for employment, are unemployed has great significance when reviewed in the light of the National unemployment rate of one in every six for this age group.

Thirty-seven percent of the 1963 vocational agriculture graduates enrolled in college last fall, with over one-half of these in colleges of agriculture. Vocational agriculture in high school seemingly does not deter graduates from attending college.

Although this study does not reveal how well these students are doing in their college work, the number of 1958 graduates who are still in college added to those who are engaged in professional work in agriculture indicates that a large percentage of those who enter college are successful in this endeavor.

It is recognized that the number of vocational agriculture graduates employed in agricultural occupations is only one measure of the success of a statewide program. In this day of high unemployment it appears significant, however, that boys who graduate from vocational agriculture programs have saleable skills as well as the knowledge and ability to succeed in programs of studies in institutions of higher education.

Pennsylvania Meets the Challenge of Retraining; Case Studies of a Three Pronged Attack, Project Sponsored by the Pennsylvania Dept. of Public Instruction, From July 1962 to December 1963.

Pennsylvania State Univ., University Park. Dept. of Vocational Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 64 96p.

ADULT VOCATIONAL EDUCATION; UNDEREMPLOYED; *VOCATIONAL RETRAINING; *UNEMPLOYED; *CASE STUDIES (EDUCATION); *PROGRAM EVALUATION; *JOB PLACEMENT; FOLLOWUP STUDIES; INDIVIDUAL CHARACTERISTICS; TEACHER QUALIFICATIONS; COURSE DESCRIPTIONS; SEWING MACHINE OPERATORS; SHEET METAL WORKERS; MACHINE TOOL OPERATORS PENNSYLVANIA; WILKES BARRE; POTTSVILLE; PHOENIXVILLE; AREA REDEVELOPMENT ACT PROGRAMS; PENNSYLVANIA RETRAINING ACT PROGRAMS; *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS; MDTA PROGRAMS; PTA PROGRAMS

Three training situations for retraining the unemployed and underemployed were studied with special emphasis on the trainers. Steps included identification of initial status, collection of explanatory data, evaluation, and recommendations for adjustment and improvement. The cases were: (1) The Wilkes-Barre Case under the Pennsylvania Retraining Act (PRA), 120 hours for power sewing machine operators, (2) the Pottsville Case under the Area Redevelopment Act, 624 hours for sheet metal machine operators, and (3) the Phoenixville Case under the Manpower Development and Training Act (MDTA), 1,560 hours for machine tool operators. The overall quality of instruction in each program was questioned. The most significant fact was the high positive relationship between length of training and earning power--the MDTA group earned 58 percent more per hour than those trained under the PRA. Recommendations were: (1) Some form of job trials should be incorporated as part of the selection process to assist trainees in making a valid occupational choice, (2) Permanent facilities for training the unemployed should be established throughout the state, (3) Retraining programs should emphasize proper work attitudes as equally important as occupational skills, (4) There should continue to be provisions for retraining programs of a job-, intermediate-, and field-oriented type to meet the needs of all unemployed individuals. 1964

FOREWORD

The plight of the unemployed in Pennsylvania is serious. Heads of households, as well as youths, are faced squarely with the problem of moving to new places of employment or learning new skills that are needed in today's technology.

The study reported, herein, is one of retraining. Pennsylvania has been a pioneer in the field of remolding its human resources to fit into a rapidly changing industrial society. In many respects, Pennsylvania's (2508.3) Retraining Act of 1952 was a forerunner of the Area Redevelopment Act (ARA) of 1961 and the Manpower Development and Training Act (MDTA) of 1962. How local programs have been conducted under these pieces of legislation; how effective each is in its own right, and what might be done to improve them were problems of this study.

The study does not profess to give insight into the total retraining effort being exerted throughout Pennsylvania. It is too early to tell what impact is being made by programs of training the unemployed. This study does, however, supply valuable and necessary information for the future establishment of such training classes. Nor, would it be proper to infer what is said here, about the programs studied, is applicable to all such retraining efforts. In fact, if similar programs were studied, they may be found as successful, more successful, or even less successful than those investigated and cited herein.

Research of various kinds have been envisioned as an indispensable aspect of vocational trade and industrial education for a number of years. The establishment in 1959 of the State Research Advisory Committee for Trade and Industrial Education attests to the forward thinking of Pennsylvania's leadership. This study represents but one more facet in the accumulation of knowledge about the many problems faced in our highly industrial state.

The findings contained herein should be of particular interest to the local and state leadership of vocational education, school administrators, school board members, and individuals from labor and industry.

George L. Brandon, Head
Department of Vocational Education
The Pennsylvania State University
University Park, Pennsylvania

PREFACE

This is a final report of a research project sponsored in part by a special grant of Ford Foundation money emanating from Dr. Gerald Somers, Professor of Economics, University of Wisconsin.

The study was undertaken as a result of the Somers' parent project, "A Critical Appraisal of Retraining and Relocation of Unemployed Workers in Distressed Areas". In addition the study received the approval and support of the State Research Advisory Committee, Trade and Industrial Education, of Pennsylvania. It was begun on July 1, 1962 and completed on December 31, 1963.

Pennsylvania Meets the Challenge of Retraining, consists of three case studies of the attack being made on the problem of retraining the unemployed and underemployed. As case studies then, these are intensive investigation of each training situation with particular focus on the individuals who made up the trainees.

The case method of research was chosen because of its probing technique. Steps that were followed included identification of initial status, collection of explanatory data, diagnosis of certain causal factors (evaluation), and recommendations toward adjustment and improvement. An inherent weakness of the case method, however, is its inability to generalize from the individual cases. It is important, then, that this fact be understood relative to the study reported herein.

Each of the cases provides a picture in actual setting of retraining, its problems, ways of meeting these problems, anticipated end results, and pitfalls to avoid. Each, then, becomes a guide to be followed when similar programs are established in other communities.

The cases and conclusions reached from their study are reported only after detailed analysis of all the available data. Nevertheless, the recommendations or findings made as a result of the research do not necessarily carry endorsement of the Pennsylvania Department of Public Instruction.

Many individuals have made a significant contribution to Pennsylvania Meets the Challenge of Retraining. Several are acknowledged as part of the preface for each case. In addition, special mention should be made of the following: Jerald A. Griess, Franklyn C. Ingram, Alson I. Kaumenheiwa, and Jerry R. Eggers, Graduate Assistants; Peter Yasenchak, Kenneth Muchler, and William Rothstein for their assistance in interviewing; and Carol J. Rockey and Geraldine R. Orr for their secretarial competency. Jerald A. Griess is also acknowledged for his many hours of coding the data.

1. THE SITUATION

OUR MOST VALUABLE RESOURCE

A PARTIAL ANSWER -- RETRAINING

1. THE SITUATION

Acute unemployment has focused attention on Pennsylvania. At the turn of the century, Pennsylvania's industrial strength was well known throughout the nation. Now, Pennsylvania is known for its problem of unemployment and rapidly deteriorating rate of industrial growth.

With the exception of the Korean War years, Pennsylvania's unemployment trend has been cause for concern. Figure 1 depicts the reason for alarm. It clearly shows the

FIGURE 1

PENNSYLVANIA'S UNEMPLOYMENT TREND 1950 – 1961[a]
(PER CENT CIVILIAN WORK FORCE)

[a] Commonwealth of Pennsylvania, Pennsylvania's Statistical Abstract, 1962, p. 198.

unemployment trend with a high in 1961 reaching 10.5 per cent of the total civilian work force. In July 1961, unemployment in Pennsylvania alone accounted for nearly one-half million out of the nation's four and one-half million jobless individuals. The extent of chronic unemployment is persistent throughout Pennsylvania, particularly in mining, railroad repair shops, and manufacturing. Twelve chronic labor surplus areas, which covered nearly seventeen counties, accounted for 26.1 per cent of the total unemployment distribution (Kaufman and Golatz, 1960). It is essential that the labor potential of these individuals be salvaged through training in new skills so as to improve their employability. A recent Governor's Committee Report (1961) on retraining of the unemployed states, "The magnitude of the problem of unemployment in Pennsylvania and the crucial situations which exist in areas of acute economically distressed districts because of changing technology calls for and requires immediate action on an emergency basis to retrain thousands of unemployed workers whose acquired skills have become obsolete or are no longer in demand."

As recently as April 1961, 51 out of Pennsylvania's 67 counties were declared, by official federal governmental definition, as depressed. Unemployment benefits amounting to over 28 million dollars was the largest single source of income in the Scranton-Wilkes-Barre area during 1961 (Shapp and Jurkat, 1962). Current estimate of unemployment places Pennsylvania at a 9 per cent plus level as compared to a 7 per cent national average.

Coupled with the unemployment picture is the fall of personal income. Figure 2 shows that during a time of general dollar increase and inflation, Pennsylvania's personal income has reached almost a plateau. The pocketbooks of Pennsylvania's total labor force have remained fairly constant from 1959. This is to say, although rising wages and prices have put more dollars into circulation, the personal income of the total Pennsylvania civilian work force has remained about the same. At the same time, the percentage of Pennsylvania's personal income to the total U.S. personal income has dropped considerably during the last two decades.

FIGURE 2

PENNSYLVANIA'S PERSONAL INCOME AND PER CENT OF U.S. TOTAL[a]

[a] Commonwealth of Pennsylvania, Pennsylvania's Statistical Abstract, 1962, p. 13.

This is but another indication that Pennsylvania is becoming increasingly poorer rather than richer.

When Pennsylvania's population is compared to that of the nation, a similar downward trend is observed. Figure 3 shows, although population has increased over the last thirty years, 1930 to 1960, at the same time its percentage of the national total has spiraled downward. The inability to maintain a constant per cent of increase in population deprives Pennsylvania of its most valuable resource; its people. The industrial might of the state can be no stronger than its human resources. A loss in labor force, through sheer numbers of potentially skilled people to perform in an ever increasing technological age, provides a situation tantamount to slow but certain paralysis. The human element in the problem, then, was of prime concern throughout this study.

FIGURE 3

PENNSYLVANIA'S POPULATION 1930 – 1960 AND PER CENT OF U.S. TOTAL [a]

[a] Commonwealth of Pennsylvania, Pennsylvania's Statistical Abstract, 1962, p. 2.

Our Most Valuable Resource

The thesis of this report is that people are Pennsylvania's most valuable resource; that the strength of the state lies not in its abundance of natural resources, but the availability of a well-trained and energetic work force. Paradoxically, Pennsylvania's unemployed find themselves out of work yet job opportunities going unfilled. New industries crave manpower who possess new and creative skills and knowledges. Employees who can not only assume day-by-day tasks, but who can adapt to new and constantly changing situations are much sought after. Sources of productive and skilled manpower are held high on the list of prerequisites when a company looks for a new location. It is a known fact that redevelopment commissions often fail in selling a company on their particular location because they cannot assure the necessary prime labor force.

Pennsylvania's high school level vocational trade and industrial training programs train only 1 out of 20 youth while in high school (DPI Report, February, 1963). Similarly, adult evening vocational training programs reached only 17,510 (Office of Education Report, 1963). Ohio, a similar industrial state, had over twice

as many adults, 36,817 enrolled in vocational industrial evening courses during the same period. In 1961-62, retraining opportunities for unemployed individuals in Pennsylvania were extended to only 3,780 (3,170 plus 610, 2508.3 and ARA) persons. All-in-all, Pennsylvania's vocational training effort falls far short of meeting the need for providing skilled manpower.

A Partial Answer -- Retraining

The remolding of that portion of the labor force that has been cast off to swell the ranks of unemployment constitutes a paramount problem. A recent study of chronic unemployment in Pennsylvania (Kaufman and Golatz, 1960) recommended that training and retraining play an important role in combating the problem. Moreover, the report advocates training and retraining for three primary reasons; training for industrial development, training for new skills, and training for migration. As near as can be determined, presently constituted retraining programs have not been specifically designed to accomplish these separate and distinct objectives. However, the attack being made on the problem by Pennsylvania's few and meager retraining efforts does lend encouragement. Job opportunities are being made available to retrained workers. Placement is reported to average better than 80 per cent of those who complete such programs. It is further reported that requests for federally approved retraining are increasing. In this respect Pennsylvania stands as a leader in the nation in the number of approved training programs for the unemployed.

This points to a need for more knowledge about such programs; how they are organized, what they teach, how they operate, and what actually happens to those who enroll in them. It is the intent, therefore, of this study to look into the retraining programs being offered by Pennsylvania to see the impact they are having on the lives of the individuals who take part in them.

In order to accomplish this, three case studies were conducted. These were investigations in depth and not mere statistical analyses of the over-all picture. Research of this method, although limited to only the actual programs involved, provides real insights to the retraining problem as well as the strong points and weaknesses of working with individuals to rehabilitate for employment. Pennsylvania in many respects has pioneered in the field of retraining. Through its own legislation dating back to 1952, the Retraining of the Unemployed, now known as section 2508.3 of the School Code, was conceived as an attack on the problem. Subsequent federal acts, namely the Area Redevelopment Act of 1961 and the Manpower Development Training Act of 1962, have provided additional programs of the types which were studied. Each of these approaches to the problem have been investigated thoroughly by means of the case method and are reported in the succeeding chapters.

The last section of the report compares the three separate approaches to the problem and tries to point up similarities and differences among not only the programs but the trainees as well. Some attempt has been made to evaluate each in respect to the job it accomplished in providing initial employment opportunities as well as future opportunities for those who completed the training. It is important to understand, however, that no inferences or generalizations from these three case studies can be made to similarly designated programs. In fact, detailed study of other such programs may reveal them as good, poorer, or better than those that have been reported.

2. A 2508.3 ATTEMPT

PENNSYLVANIA'S TRAINING OF THE UNEMPLOYED

A middle age woman sat intently before a device which appeared similar to a home sewing machine. Her attention was focused on a piece of fabric which fed through an oscillating needle at an incredible rate. Obviously this machine was not of the home type. This was an industrially designed power sewing machine; one which is capable of sewing yards of cloth and stitching literally miles of thread in a single hour. The woman stopped the machine, held up a partially completed garment and gazed at it with an expression of satisfaction. She said, "Now I'm getting the knack of it. You know, it isn't so hard once you learn not to be afraid of these machines."

Mrs. Janowitz was learning to operate a power sewing machine prior to securing employment in a garment industry. Her previous employment had been a knitter in a silk mill, and when the mill moved out of town she found herself on the rolls of the unemployed. Mrs. Janowitz's weekly pay check, or at least until she became unemployed, went to send one of theirsons to college; it made the difference, she said, "Between an education for my boy or him having to be just a plain mill hand like his Dad."

Now she was learning something new; a new occupation where there was ready employment. Again her weekly pay check would make the difference and her son would have his opportunity to the occupation he desired; an engineer. Such has been the service provided over 17,000 Pennsylvanians by the State's own effort to retrain the unemployed. The story of one such program (power sewing operator) is recorded as part of this report.

PA's TRAINING OF THE UNEMPLOYED
(Section 2508.3 - School Laws of Pa., 1957)

In many respects, Pennsylvania has been a pioneer in its effort to provide training for unemployed and underemployed adults. The State Program for training the unemployed was initiated in May 1952 under provisions of Act 134A. This act was superseded at the close of the 1953-55 biennium by the passage of Act 78A. In July 1959, the provisions of this retraining program were permanently incorporated into the Public School Code of Pennsylvania (Act 398) which amended Section 2508 (1953), "Distribution of (Federal) Unencumbered Funds for Vocational Education," by adding Section 2508.3 to provide for vocational training of recipients of public assistance and unemployment compensation.

The new section stated, "The State Board of Vocational Education shall establish rules and regulations and thereunder approve and authorize payment of the full cost of intensive vocational education classes for qualified assistance recipients or other unemployed to take definite available employment which may be contingent upon such training." (Commonwealth of Pennsylvania, 1957). Pennsylvania, thus, became one of the first states to recognize the need for full reimbursement to local school districts for training the unemployed.

The pursuant procedures and regulations governing training of the unemployed, as established by the Department of Public Instruction, provide for training on a cooperative basis among the local school district , the Department of Public Instruction, Department of Public Assistance, and Department of Labor

and Industry.

Procedures are established and regulations supervised by the Trade and Industrial Education Service of the Department of Public Instruction. Assistance in organizing local programs is provided by nine Area Coordinators of Trade and Industrial Education.

Appropriations for training the unemployed have amounted to over a million dollars with $237,391.00 set aside for this purpose during 1961-62. Since 1952, training has been offered in approximately 40 different and diverse occupations which indicates the broad scope of the program.

Purpose of the Act. -- The purpose of the Pennsylvania program is to provide brief, intensive vocational training for unemployed and underemployed adults. The training is designed to equip recipients of public assistance and other unemployed with the basic skills and technical knowledge required for entrance into a local industry. The training areas are broad and course titles need not be restricted to industrial occupations, but are limited to available employment opportunities.

The controlling purpose of this program is to prepare public assistance recipients or other unemployed persons for immediate employment opportunities. Programs are limited to those occupations in which job competency can be developed within a short period of time. Occupations for which training may be provided are limited to those indicated as "demand" occupations by the Pennsylvania State Employment Service.

Training Provisions. -- Section 2508.3 of the Public School Code of Pennsylvania makes possible the training of public assistance recipients or other unemployed persons. Courses must be initated cooperatively by representatives of the local school district, The Pennsylvania State Employment Service, and the Department of Public Instruction. Other interested governmental agencies and civic groups, such as the local Chamber of Commerce, Redevelopment Commission, and so forth, are usually consulted.

The yearly amount of appropriation available is limited; therefore, consideration is usually given to requests in the order they are received with emphasis upon the relative need for training and available opportunities for employment.

Course applications must be supported by letters from representatives of Public Assistance and Employment Service setting forth approval of course, objective, availability of trainees, and probable opportunities for employment following training.

Selection of Trainees. -- Trainees are cleared through the Pennsylvania State Employment Service and cannot be required to pay for pre-entrance examinations. Age cannot be a factor in the selection of applicants and all applicants must be residents of Pennsylvania. Local employment offices have the responsibility of assuring the unemployed status of all individuals referred to training courses. It is understood that local employment offices are responsible for the referral and placement of relief recipients, and the proper notification of referrals, separations, and placements to the county boards of assistance.

Local employment offices also assume the responsibility of trainee placement. In turn, the local school district has the responsibility of reporting these placements to the Department of Public Instruction on a monthly basis. Inasmuch as applications are submitted on the basis of a local determination of the need and suitability of training, the continued operation of the program is dependent upon placement of at least 60 per cent of those completing the course.

The Type and Length of Courses. -- Courses are not restricted to industrial occupations and applications (Title I) are reviewed by a committee composed of representatives from the departments of Commerce, Labor and Industry, Public Instruction, and Welfare. Health service applications (Title II), which are mainly in the area of practical nurses training, are reviewed by the Office of Trade and Industrial Education. Approval of Title II applications is based on the recommendation of this office and availability of funds. Since the conception of the program, training has been provided in 29

counties by 47 school districts with enrollment approximating 17,000 individuals.

Courses are generally limited to a maximum of six months duration for any one trainee. Classes are conducted for a minimum of 30 hours per week.

A partial listing of courses to provide some idea of their breadth follows: auto body repairman, bricklayer, industrial carpenter, diesel mechanic, electrician, letterpress printing, radio repairman, tracer (drafting), welder, shoe manufacturing, sign painting, and so forth.

Allowances for Trainees. -- Normally there are no allowances provided to trainees. Unemployment compensation claimants are generally considered good potential trainees. However, if provided referrals during the training program, they must be willing to quit the training course to accept suitable employment.

If a training course includes a stipend to the trainee related to the actual on-the-job performance, placement credit may be recorded at the point in the training where performance on the job begins and stipend is received. This is particularly prevalent in the Title II training of practical nurses.

It is apparent from this brief summary of Training of the Unemployed (Section 2508.3, Public School Code) that Pennsylvania is at least attempting to make maximum utilization of state and federal funds to meet its unemployment problem.

In actual practice, these training programs have resulted in short intensified periods of training for new industries, such as shoe manufacturing and hosiery finishing which move into a community as part of industrial development. Such occupations require, at the most, a semi-skilled level.

Short Term Retraining (120 hours)

Short term retraining is served partially by Pennsylvania's 2508.3 program. The training of power sewing machine operators in a 120 hour course is a typical example. Training of a similar nature has been conducted in the occupational areas of:

paper hanger and interior decorator
industrial carpenter
electrical motor repair
hosiery finishing
radio and television repair
shoe manufacturing
waiter and waitress
power sewing machine operator
autobody repairman
electrical assembling
furniture repairman
polyethylene extrusion operator
sheet metal fabrication
television service
wood worker, hand and machine

Power Sewing Machine Operator (6-27.502)

The Dictionary of Occupational Titles (1949, p. 1181) defines the power sewing machine operator (any industry) as, "one who performs any or all sewing operators on fabrics or similar materials by use of a sewing machine to produce articles such as garments, upholstery, awnings, or hand bags; places spools and wound bobbins on machine; draws thread under tension spring, through guides into eye of needle, adjusts tension on thread and raises presserfoot of machine to admit piece for sewing, lowers presserfoot onto material, starts machine and guides material to be sewed under needle." In most cases, power sewing machine operators are designated according to the type of machine operated and classifications of sewing machine operators are made according to the industry in which the work is done.

THE WILKES-BARRE CASE
Power Sewing Machine Operator

The following case is based on Pennsylvania's 2508.3 legislation. The Wilkes-Barre City School's program was singled out as being an outstanding example of this type of retraining. The authors of this report are indebted to the Wilkes-Barre school authorities, especially Messrs. William J. Morgan and Kenneth J. Muchler, Director and Coordinator respectively of Vocational-Industrial Education; The Pennsylvania State Employment Service, Wilkes-Barre-Hazelton Office and its manager, Mr. N. J. Haydock, and the industries, employees, and teachers of the power sewing machine retraining course for their splendid cooperation and contribution to the study.

The Community

Wilkes-Barre serves as the seat for Luzerne County. It is situated on the east bank of the Susquehanna River in the Wyoming Valley approximately ninety air miles from Philadelphia and one hundred air miles from New York City. The city has a population of approximately 63,500 and is considered the financial, industrial, and commercial core of a metropolitan district which embraces thirty separate but contiguous municipalities having a total population of over 191,000.

This district is the center of the Wyoming Valley complex of cities, boroughs, and townships which have an aggregate population of approximately 278,000 people. Most of Luzerne county's population is located in Wyoming Valley's one hundred and fifteen square mile area. The balance of the county's vast eight hundred and ninety one square mile range consists of scenically rugged countryside dotted with lakes and resort areas. The Pocono Mountain slopes have their beginning along the eastern rim of the valley.

Historically, Wyoming Valley was first settled by the New England colonies in 1769. Wilkes-Barre city incorporated as a borough in 1806 and as a city in 1871. The territory served as the battle ground for fierce Yankee-Pennamite wars and conflicts with Indians which reached a high point during the Wyoming Massacre in 1778.

Wilkes-Barre and the surrounding communities take pride in their exceptional fine public and parochial school systems. Additional educational opportunities are provided by the Wyoming Seminary, one of the East's leading preparatory schools (primary through secondary) and St. Ann's Academy for girls; two outstanding private institutions. Four colleges, namely Wilkes College, Kings College, Misericordia, and The Pennsylvania State University Commonwealth Campus offer programs of a post secondary nature.

The Economy. -- The area was initially agrarian with timber and mineral products playing a minor role. Discovery of high quality anthracite coal (1808) spurred an epoch of mining industry which hastened the development of a great network of railroads and beckoned a rising tide of immigration from the British Isles and Europe.

The coal industry provided for a high degree of prosperity that reached its peak in 1918 when 37.7 million tons of coal were mined in the Wilkes-Barre-Hazelton area. Peak employment of 67,207 workers was reached in 1926. Over the years the decline in production of this commodity has been steady. Production dwindled to a point where in 1960, when a mere 5 million tons were mined; only 6,002 individuals were employed.

The Employment Picture. -- Comparison of sources of employment for the years 1959 and 1960 with the primary source of information coming from the Pennsylvania State Employment Service and the Community Research Center,

Wilkes College, Wilkes-Barre, Pennsylvania, is reported in Table 1. Per cent changes in mining, manufacturing, and government are of particular interest.

Table 1
COMPARISON OF EMPLOYMENT, 1950-1960
Wilkes-Barre-Hazelton Area[a]

Source of Employment	Persons-1950	Persons-1960	Per cent change
Mining	34,500	6,200	-18
Manufacturing	37,300	41,400	+ 9
Self employed	15,600	15,600	0
Wholesale and retail trade	20,600	18,900	- 9
Government	10,300	11,500	+ 9
All others	24,000	24,300	+ 1
Totals	142,300	117,900	- 8%

[a]Greater Wilkes-Barre Chamber of Commerce

The unemployment problem in the anthracite mining industry can be traced with authenticity as far back as the post-Civil War Era, and represents nearly a century of recurrent economic tribulation and frustration to the hard coal industry. The high losses in production and employment in recent decades are directly attributable to the in-roads of the competitive fuels, oil and natural gas, which have captured a considerable share of traditional anthracite markets. A sobering example of the decline in employment in the hard coal mining industry can be seen when comparing the all time high of 180,899 mine workers in 1914 with 24,186 workers in 1958. At the present time, mining represents but 1.3 per cent distribution of employees in Pennsylvania. On the other hand, manufacturing accounts for over 37 per cent employment throughout the state (U.S. Department of Commerce, 1962).

Employment change in select industries as of October, 1962, when compared with October 1961 figures in the Wilkes-Barre-Hazelton labor market area, appears in Table 2. Here, too, in a single year the downward trend continues.

In general, employment statistics for the manufacturing industries in Pennsylvania show a low but steady decline. For example, total employment has declined over the 1960-61 period at the rate of 3.5 per cent. Accompanying this decline, the apparel and related products manufacturing, which is of particular interest in this study has declined over the same period at the rate of 1.3 per cent (U.S. Department of Commerce, 1962). In Luzerne County, the apparel industry accounted for the largest portion of employment engaged in manufacturing during the year 1961 with a total of 16,662 or 39 per cent of all individuals employed in manufacturing (Commonwealth of Pennsylvania, 1962). In the Wilkes-Barre-Hazelton area (Luzerne County) up-to-the-minute figures indicate a slow but steady employment decline of apparel and related products workers. Despite this steady decline, there appears an everlasting need for power sewing machine operators. It is a well known fact that women in the manufacturing occupations are not as stable in their employment as males. Therefore, to merely keep pace with turnover needs, it is important that the Wilkes-Barre Program train approximately 200 women per year as power sewing machine operators.

Job Training Needed (90 hours). -- The operation of a power sewing machine is a semi-skilled occupation. For this reason, short intensive

Table 2
EMPLOYMENT CHANGE IN SELECT INDUSTRIES - 1961-1962 COMPARED[a]
WILKES-BARRE-HAZELTON LABOR MARKET AREA
(In Thousands)

Industry	October 1961	October 1962	Change
Total Civilian Work Force (est.)	129.7	128.3	-1.4

Mining	4.8	3.8	-1.0

[a]Bureau of Employment Security, Labor Market Letter, Wilkes-Barre-Hazelton Area, October, 1962.

training is needed to: (1) acquire the necessary skill, and (2) to give the operator self-confidence necessary to not only operate the machine, but to fit into the production pattern. Most women have some time or other throughout their lives operated a domestic sewing machine. Production equipment is, in some respects, similar to the domestic sewing machine, however, it operates at a much higher rate of speed.

Analysis of the required operations pointed toward 90 to 120 hours on the average needed to develop both the self-confidence and required skill. This, then, is short term training of such a nature as not to require the highest in either mental or physical aptitude. Training of this type is often left entirely up to the industry itself to be provided on the job or of the vestibule type.

How The Needs Were Determined. -- In the Wilkes-Barre case, as will be found in most instances where school authorities have established proper rapport, the industry itself (both garment and shoe) did not hesitate in expressing their problem, which was the need for a supply of basically trained power sewing machine operators.

In 1952, the Wyoming Valley area was selected as the relocation site by a large number of garment shops. Many of these manufacturers migrated from the New York City area in an attempt to find a more suitable working climate. Initially, they were dispersed over a wide area, setting up production in storerooms and other make-shift physical facilities. Although handicapped by such a lack of facilities, they were even more hindered by a critical shortage of trained sewing machine operators. The industry assured all individuals, who possessed any ability and knowledge of power sewing operation, full employment. The Wilkes-Barre City School authorities recognized the plight of the industry and the evolving unemployment picture caused by the closing of local coal mines and volunteered to establish a power sewing machine operator retraining program. Initially, the facilities consisted of 12 machines with 3 separate class shifts run each day. As promised, the garment industry immediately employed all individuals who satisfactorily completed the training program.

The Program

The turn of the century found the Wyoming Valley area suffering from the impact of a rapidly declining coal industry. Unemployment had spiraled to serious proportions and it was obvious the situation would become increasingly worse if new jobs and new skills for the

manpower potential could not be developed. In 1952 the Wilkes-Barre City School authorities became directly involved in a retraining program to assist in alleviating the situation. The garment industry, in particular, transmitted a need to the public schools for trained power sewing machine operators. The industry offered to establish an advisory committee (about seven individuals) to explore further, with the school authorities, the problem of providing a training program. An attempt was made to carry on a program of training power sewing machine operators, within the plants themselves, making use of the factory equipment, and supervisory staff serving as instructors. This vestibule type training proved unsatisfactory to both the employers and the school as it distracted from both production and instruction. After about a year, it was agreed to recognize the program on an "in-school" basis with the public school providing the physical facilities and the industry the equipment and materials. The program has operated under this plan throughout the years. Figure 4 gives some idea of a typical power sewing machine operator class situation.

The training idea was first conceived to "weed out" those individuals who did not possess the mechanical aptitude to handle a power sewing machine and to acquaint the trainee with the simple and fundamental operations applied to the garment industry. The first course ran only 60 hours. This was thought to be ample time to acquaint the trainee with the bare essentials of power sewing machine operation. The companies then took over and provided any detailed training peculiar to their type of machinery and product. The garment power sewing machine operator program was carried on in this manner for the next seven years. During this time, it functioned as a trade extension course offered as part of the adult education program of the Wilkes-Barre City Schools.

In the interim, the shoe industry of the Wyoming Valley observed the success of the program and requested similar assistance in training power sewing machine operators for the manufacture of shoes, leather and plastic goods. Again, an advisory committee was formed and in 1956 a program for the training of individuals to operate power sewing machines for the shoe industry was organized.

It is interesting to note that in the early operation of the program no specific student selection requirements were established for either program. Students registered directly with the school and "flunked" the program only after it was determined definitely that they did not possess the aptitude to become a power sewing machine operator. The notion behind this procedure was that the school was to help prepare for employment and they were only too willing to accept any and all who desired the retraining. During the first seven years of the program, approximately four hundred individuals were trained annually for absorption by the two types of manufacturers requiring power sewing machine operators.

Since 1960, the Wilkes-Barre school authorities have taken advantage of section 2508.3 of the Pennsylvania retraining act. Prospective re-trainees have been screened and selected by the Pennsylvania Employment Service, who use the General Aptitude Test Battery and their multifactor interview technique to determine chances of success if enrolled in the training program. Detailed study by the P.S.E.S. has revealed considerable understanding of the aptitudes needed by power sewing machine operators and an individual's mastery of the skill is almost guaranteed if he passes the screening process.

Placement of graduates from the program appears to provide no problem. The garment industry has an exceptionally large and rapid turnover in employment due to normal conditions. The preponderance of female workers creates the problems of marriage, raising of families, and so forth, which are met by a continual migration in and out of the occupation. Therefore, trainees, with the aid of the Pennsylvania State Employment Service, have little difficulty in securing employment in this occupation even when the industry itself is not expanding. Ads appear almost daily in the local newspaper beckoning experienced and even learning sewing machine operators to busy shops. The typical ad reads:

SEWING MACHINE
OPERATORS
Experienced and Learners
Steady Work
Day and Nite Shifts

The steady demand for trained power sewing machine operators has projected, what school authorities originally thought was, but a timely need into a permanent type program now in its eleventh year of operation. And, still, there is no end in sight. Such permanency, or taking for granted, that there will always be a power sewing machine operators school as part of the Wilkes-Barre system does, however, present some problems which will be discussed more adequately in the section on evaluation. Nevertheless, it is fitting here to say that employers themselves, rating the value of the training on a dollars and cents basis, say it saves them from $95 to over $400 per new employee. Moreover, they are quick to admit that, without a source of already trained operators, they would soon be in a bind.

Developing the Curriculum

The training of power sewing machine operators constituted a new educational endeavor of the Wilkes-Barre City School authorities. Not only was it necessary to determine what should be taught, but physical facilities, instructor qualifications, teaching techniques, and procedures all had to be determined. In order to arrive at the best and most realistic answers to these problems, it was requested that the industry provide an advisory committee to give advice and counsel to the entire program.

The Advisory Committee was constituted with seven top officials from the industry. They were charged primarily with determining: course content, qualifications of the instructor, proper and adequate equipment, and standard practices in the occupation. One of their first tasks was to approve the curriculum and set the number of hours of training. It was established that the course objective would be to identify those individuals who possessed the aptitude and dexterity to become sewing machine operators. It was agreed that the school would serve best in the role of proving basic training with the industry itself giving on-the-job detailed training. Initially, the committee agreed that approximately 60 hours of classroom instruction, (which now has been increased to a maximum of 90 hours for the garment industry and 120 hours for the leather goods industry), would be ample. The initial cooperation of the advisory committee and school has continued throughout the years.

Following are course outlines for the power sewing machine training program for the garment, upholstery, and shoemaking industry as conducted by the Wilkes-Barre City Schools.

POWER SEWING COURSE
Garment Industry

Topic

A. Machine Theory - single needle (95-1 and 95-10 lockstitch)
   1. Explaining the machine
   2. Sewing without thread for control
   3. Threading machine and bobbin winder

B. Operations:
   1. Sewing straight lines and making square corners (foot spacing)
   2. Sewing circles (foot spacing)
   3. Edge stitching
   4. Tacking
   5. Joining straight seams and top stitching
   6. Joining curved seams and top stitching
   7. Joining curved seams to straight seams and top stitching
   8. Joining two opposite curves and top stitching (yokes)
   9. Making square collars, turning and top stitching
   10. Making round collars, turning and top stitching
   11. Setting collars with bias binding
   12. Back stitching collars and setting labels
   13. Hemming square pockets
   14. Setting square pockets and top stitching
   15. Making round pockets and top stitching
   16. Setting round pockets and tacking
   17. Shirring skirts and setting bands
   18. Making blouse darts
   19. Making V darts
   20. Making curved darts
   21. Making slit darts

22. Making french cuffs
23. Making sleeve plackets (slit)
24. Making skirt and blouse plackets
25. Setting side pockets
26. Setting skirt zippers
27. Setting dress placket zipper

C. Attachments:
1. Up turned facing hemmer
2. Under facing hemmers and setting labels
3. Right side top stitching
4. Left side top stitching
5. Rolled hemmer (1/4 inch)
6. Setting binding on collars and necklines
7. Cleaning and oiling machine
changing machine and bobbin winder thread
changing needles
8. Joining long strips for speed and handling material

Upholstery Machine

Topic

1. Machine Theory (111-W-155)
   a. Explain machine
   b. Sewing without thread for control
   c. Threading machine
2. Sewing squares and making corners
3. Sewing foot spacing circles
4. Locking
5. Joining straight strips and tacking
6. Joining curved seams and tacking
7. Joining curve to straight seam and tacking
8. Joining two opposite curves and tacking
9. Boxing
10. Cording
11. Cleaning and oiling machine
changing thread
changing needle
changing stitches
12. Joining long strips for handling and speed

TOTAL 90 hours

Shoemaking Industry

A. Type of machines in classroom
   1. 31-15 or 41-17 Flat Machine (lockstitch)
   2. 51-W-54 Post Machine (lockstitch)
   3. Union Special Machine (chainstitch)
B. Functions of machines
C. Important parts of machine
   1. Needle
   2. Bobbin - no bobbin in Union Special
   3. Foot treadle
   4. Knee lift
   5. Foot
   6. Feed
      a. Wheel and gear feed
      b. Dog feed
   7. Stitch adjuster - length
      a. Various sizes of stitching
D. Lubrication
E. Putting machine into operation
F. Stitching
   1. Flat Machine (Lockstitch 31-15 or 41-17)
      a. Straight lines
      b. Curves
      c. Top lines
      d. Designs
      e. Closing
      f. Putting two pieces together as overlays and underlays
      g. Binding
   2. Union Special Machine (2600 chain-stitch)
      a. Straight lines
      b. Curves
      c. Closing
      d. Sach stitching
      e. Rapper stitching
   3. Post Machine (51-W-54 lockstitch)
      a. Straight lines
      b. Curves
      c. Top lines
      d. Designs
      e. Binding
      f. Counter packets
      g. Back straps

TOTAL 120 hours

Planning and Installing the Facilities. -- It is obvious that commercial equipment of the type needed to train power sewing machine operators comes with a high price tag. Even more acute was the dire need for space allocation in an overcrowded Wilkes-Barre school system as far back as 1952. The first attempt to establish facilities was made in a factory. Here in-plant training was given for several months. In October 1953, the program was moved to the old Grant Street Elementary School where it occupied a 30 x 40 foot space.

As is often the case, when necessity is the mother of a lot of things, someone came up with the idea to utilize approximately 3500 square feet of floor space which was located in the James M. Coughlin Annex Building. Modification of this area was made in 1962 and the program took up permanent and more adequate residence where it has been located ever since.

Equipment has not been too great a problem. From the start, the industry allocated 15 sewing machines to the program. With the addition of the leather goods machines, it is estimated that approximately $10,000 worth of equipment has been provided by the industry for training purposes. This is in addition to the donation of scrap materials for instructional purposes.

The facility and equipment arrangement is shown in Figure 5, although admittedly not spacious or even ideal. It should be noted that ample storage space is an essential consideration; along with a rest room, and lavatory facilities for both men and women. The arrangement of the equipment into work stations can, of course, be varied to suit the method of instruction. The Pennsylvania garment industry is mainly operated on a production basis -- that is, each operator doing one or a few operations. Therefore, the closeness of machines and production line atmosphere provide a realistic setting for the trainees.

The Teachers. -- The recommendation of teachers of the Wilkes-Barre power machine operator program has been a function of the Advisory Committee. In this respect, it is interesting to note that one of the teachers has been in continuous employment since the inception of the program. Obviously, any teacher must have command of the subject area being taught. This principal was followed as both teachers are recognized experts in the occupation, having held responsible positions in the industry with records of experience of 12 years in one case and 15 years in the other.

An advantage, implicit in the Wilkes-Barre power sewing machine program, which is not typical of 2508.3 retraining programs, is that it has continued to thrive over the years. The teachers, then, have become a permanent part of the scene and have experienced a considerable amount of professional preparation so that one now holds a masters equivalent certificate having amassed 90 hours of college work and the other a vocational extension certificate. All-in-all, both teachers have eminently qualified themselves to handle the task of training power sewing machine operators.

It is felt by those who supervise the Wilkes-Barre Program that the following should be adhered to as minimum in teacher selection irrespective of the length of the retraining program. The teacher training topics that are desirable to assure success are also mentioned.

MINIMUM TEACHER QUALIFICATIONS
Retraining Program (2508.3)

Formal education	High School Graduate
Experience	6 years in the occupation
Teacher preparation	A minimum 10 clock hour course in teaching techniques
Certification	The basic certificate (emergency)
Personal qualities	Ability to work with and handle adult groups

[1] Department of Public Instruction, Teaching Vocational Education Subjects, Harrisburg, Commonwealth of Pennsylvania, 1960.

An understanding of the aforementioned topics represent but the basic rudiments of good teaching. Each topic must be presented and mastered by any teacher, whether employed or on a full or part-time basis, if instruction is to be effective. It is, therefore, recommended by those involved in this retraining program that a preservice teacher training program be established for the teacher well before the appearance of the students. This can be accomplished either on an individual instruction basis or in a group setting where several retraining instructors are brought together for the instruction. Under no circumstance should this important aspect of teacher preparation be ignored. Usually, this type of specialized training requires the seeking out of a teacher with specific skills and abilities, the like of which will not be found in those pursuing a regular teacher preparation program. Undoubtedly, Advisory Committee recommendations will be most valuable in locating teachers for short term retraining programs. Other sources would include:

- Graduate from teacher training programs
- Retirees from Armed Services (Many of these retire at an early age)
- Industrial personnel who can be granted leaves of absence
- Graduates from a similar program who have had experience in industry
- Representatives of manufacturers associations whose services are available for putting on short courses.

Selection of Trainees. -- Trainees for the program were selected by the Pennsylvania State Employment Service. Job orders (descriptions) provided the necessary job information and a number of standing orders are a normal practice. Minimum requirements specified that females under 45 years of age were preferred. Specific standards of selection included a testing program involving factors S, M, and O of the General Aptitude Test Battery. Counselling to help make a decision about enrolling in the training course was not necessary for all applicants.

The Trainee

The Pennsylvania Training for the Unemployed (2508.3) Act requires that the Employment Service screen and select the applicants for training. In this process, The Pennsylvania State Employment Service through its local offices tests, interviews, and advises unemployed individuals as to their capabilities and opportunities to take part in retraining programs.

The Wilkes-Barre School authorities have found this procedure highly satisfactory, however, they do reserve the right to reject any of the trainees as being unsatisfactory throughout the retraining period.

Even though the occupation of power sewing machine operator is classified at a semi-skilled level, it is said that the meticulous screening requires the processing of almost five individuals to find one who possesses the necessary requirements to assure success.

General Characteristics. -- Investigation by the authors of this report found the trainees to possess the following general characteristics as

measured by the California Mental Ability Test, (Short Form), and the Sims SCI Occupational Rating Scale:

Table 3
GENERAL CHARACTERISTICS OF POWER SEWING MACHINE TRAINEES

Characteristics	Findings
1. Mean chronological age	33.6 years
2. Mean grade placement	7.0 years
3. Mean I.Q.	77.0
4. Normal population I.Q. compared	10.0 Percentile
5. Social status (self perceived)	Worker

The characteristics in Table 3 are probably typical of the average power sewing machine operator trainee. This is to say the typical individual, whether male or female, who selects the operation of a power sewing machine as an occupation is mature, has a limited educational background, and perceives himself as a member of the working class. More intensive insight into the personal history and background of the individuals who were preparing to become power sewing machine operators, was uncovered through a depth interview with each. The significant results from these interviews typified the average individual learning to be a power sewing machine operator in the Wilkes-Barre program as:

Depth Interview. -- A depth interview lasting approximately one hour was conducted with each trainee. The first half of the interview was held at the school. The second half, or follow-up, was conducted approximately three months later either at the place of employment or at the trainee's home. The following description of the group stems from this depth study:

- Personal Characteristics

Personal characteristics of the power sewing machine program trainees reflect a good deal of pertinent information. In essence, trainees themselves become the "raw material" from which will be fashioned the best and most competent workers possible. Following are characteristics of the trainees:

Sex -- 9 were male and 13 female

Age -- 11 of the 22 were under 25 years of age, 6 were from 25 to 50 years of age, and 5 were over 50. The oldest was 54 years and the median age of the group was 25 years.

Residence (Local) -- 16 of the trainees (72.7%) lived in the community all their life. 3 years was the shortest time lived in the community.

Residence (State) -- All 22 trainees were residence of Pennsylvania from birth.

Marital Status -- 10 were single, 10 were married, and one divorced.

Social-economic Status -- all 22 classified themselves in the working category.

Living Accommodations -- 5 owned their homes, 5 rented, 11 lived

with a parent or guardian, and 1 had a home provided by a relative.

Relatives -- 14 of the 22 had relatives living in the immediate area. The number of relatives ranged from 1 to 42.

The trainees apparently constitute a heterogeneous group as far as age and marital status are concerned. However, they are all native born Pennsylvanians, and the result of our own unemployment problems. All considered themselves workers and over half of them have strong family ties in the immediate community. The fact that 5 out of the group, or almost a fourth of them, own homes points further to their deep community roots.

- Family Characteristics

The characteristics of the families of the trainees appear as follows:

Household Members -- 11 trainees came from a household with 3 or less members, and 11 from households with 4 to 8 members. A total of 86 household members were reported by the group or an average of 3.9 per household.

Youngsters in Household -- 14 came from households that did not have youngsters 16 years of age and under. One had 5 such youngsters and the remainder 1 to 3.

It appears that the trainees for the power sewing machine operator program do not come from large families. At the same time, except for one case, the households are represented by older, more mature individuals and there is a decided lack of those under 16 years of age. The one exception is 5 youths all under 16 years were reported in one household.

- Socio-economic Origins

Socio-economic origins of the trainees appear as follows:

Father's Occupation -- Ten of the trainees had fathers who were employed the majority of their lives as non-farm laborers; 4 were, or had been either owners or managers of small businesses; 3 were operatives in a factory; 2 craftsmen or skilled mechanics and 1 was classified as not being in the labor force the most of his life.

Socio-economic Status -- Ten of the fathers' occupations could be classified as lower working, 3 working, and 2 middle working.

Of the 22 trainees, almost half of them came from fathers who earned their livelihood as laborers. This places them in the lower working socio-economic category. However, as potential semi-skilled power sewing machine operators, they (the trainees) aspire to the working classification. In other words, being a "common" laborer, who possesses little if any skills is not for them.

- Employment Status of Family Members

The effort being put forth by other family members in respect to employment appear below:

Number of Family Members (over 14 years) Not Going to School -- A total of 37 family members over 14 years of age were reported in the households of the trainees. This represents on the average less than 2 per household.

Family Members Employed -- 20 of the household members were employed full time and 1 was

employed part time; in other words, over half of those eligible (56.7%) for employment.

From this description, it can be seen that those eligible to work in the trainee's family are attempting to carry a share of the family financial burden.

- Employment History

The employment history of the trainees follows:

Number Times Employed -- Five of the trainees (25%) had never been employed before. Ten of them were employed 1 time previously and the remainder 2 or more times. Only 1 was employed previously more than 3 times.

Location of Employment -- All 15 who had been previously employed had been so in the immediate community.

Type of Employment -- Forty per cent had been employed at an unskilled job and 60 per cent at a semi-skilled job. None were employed in a skilled position.

Distance from Home -- Thirteen of those who held previous employment traveled a distance from 1 to 5 miles. Only 1 traveled over this distance.

Wages Earned -- The median wage earned was from $40 to $49 per week. Only 3 jobs held paid over $60 per week.

It is obvious that the work history of the trainees was somewhat varied. However, a fourth of them (5) were apparently preparing for their first employment experience. Moreover, most previous employment had been in the immediate community and at a relatively unskilled level.

- Previous Training

Previous training of the group appears as follows:

Number of Times Taken -- Only 5 out of the group (22.8%) had taken any previous occupational training.

Helped Get Job -- Of the 5, only in a single case did it help secure employment. And, at no time did it lead to a job in another city.

Length of Course -- The median length of training was 17 to 26 weeks. In 2 cases, it was 27 to 52 weeks and, in 2 cases, 9 to 16 weeks duration.

Type of Training -- Training in 2 cases was in nurses aide, 1 in beautician, 1 in clerical, and 1 in other services.

Results -- 1 said it helped get a new job, and in another case it helped get a promotion.

This group was certainly not training wise. Only 5 had ever had any previous training. Limited results, to say the least, were reported as a result of this previous training.

- Educational Background and Cultural Values

The educational background of the group may well serve as a measure of future success even in an occupation as repetitive as power sewing machine operator. Similarly, the value held of education is important to not only the individual's accomplishment but to those with whom he associates. Educational background and values of the group appear as follows:

Formal Education -- Only 2 of the 20 completed high school.

Educational Achievement -- 11 of the 22 (50%) indicated they had done about as well as other students when in high school. 5 thought they did better and 5 admitted they didn't do as well as other students in high school. The group, as a whole, had a 77.0 I.Q. on the California Short Form Test of Mental Maturity and a grade placement of 6.9.

Favorite Subjects -- 9 of the group recalled the physical sciences (biology, chemistry, mathematics, etc.) being their favorite subjects, 4 liked English, 1 preferred the humanities (English literature, poetry, music, etc.); 3 each business subjects, and social sciences (history, sociology, economics, etc.), and only 1 manual skills, i.e., home economics, or shop. In the main, the subjects liked best resulted in the highest grades.

Higher Education -- 1 went to college, but did not complete. 1 admitted giving college serious thought but for "financial reasons" would not attend.

More Education -- 17 out of the 22 readily admitted they would have gotten more education if they had it to do over again. 7 would have finished high school; 2 college; 4 high school and college; 2 trade school, and 1 business school.

Educational Values -- When asked about the value of education for youth, either in their immediate family or acquaintances, 18 of the group (81.8%) felt all should finish high school. Moreover, 9 of this number expressed a need for youth to go on to college. 4 of the group merely said, "youth should go as far as they can in school." 13 of the group felt that boys, under no circumstance should drop out before completing high school, and as to how far boys and girls they know will actually go in school, they held the opinion 3 to 1 that most would complete high school.

- Cultural Values

Cultural Values -- All of the trainees claimed to regularly read at least one newspaper. Five read more than one local and 3 read local and out-of-town papers. Five said they did not read any magazines regularly and 3 did not watch TV regularly. One out of 4 did not know the name of the governor and 1 out of 6 did not know the name of their congressman. Only 5 had any idea of who the largest employer was in the community.

Societal Values -- Seventeen out of the 22 were church members, 2 were members of the PTA either presently or in the past, and 2 belonged to a sports or hobby club. None belonged to a social club, political organization, but 3 were members of a union.

It is evident from this picture of educational background and cultural values that the group of trainees were quite limited in both. This group left much to be achieved in the way of formal education. Little advantage seems to have been taken of the mass media of TV, periodicals, and the like. It is assumed, however, since over half of the trainees were female, that little time was available for leisure activities after the completion of home chores.

- Aspirations and Occupational Mobility

Aspirations for either one's self or sons and daughters could have some bearing on the problem of mobility. Trainees of the power

sewing machine course held the following aspirations and attitudes toward mobility.

Aspirations for Sons and Daughters -- The make-up of this particular group of trainees and the fact that they were either extremely young (11 of the 29 were under 25 years of age and 5 were over 50) somewhat precluded answers to this item. Of the group, 1 expressed the desire for her son to be an engineer and 1 a craftsman. No aspirations for daughters were reported.

Self Aspirations -- Fourteen out of 22 (63.6%) admitted desires to do some other kind of work than they either had been doing or for which they were being trained. These aspirations ranged from such occupations as registered nurse to bank teller. However, only 4 of the group felt a strong chance of ever achieving their ambitions.

Mobility versus Retraining -- Thirteen per cent of the group (59.1%) felt it would be more difficult to move to a new community where there were employment opportunities in their old occupation than to be retrained for a new occupation and remain where located.

Returning to Old Occupation -- Only 3 of the group felt they had an excellent chance of getting their old job back; 4 said "no chance," and 8 said "fair" chance.

Mobility of Residence -- Seventeen out of 22 (77.3%) indicated they expected to be living in their same community 5 years from now. Reasons for the 5 not holding this feeling were, "no jobs in area," and "don't like area."

Encouraged Mobility -- If provided encouragement and a free choice to move anywhere in the U. S., 11 would go on living in their communities, 7 would move elsewhere, and 4 didn't particularly care. Of the 7 who would prefer to move (31.8%), they chose a metropolitan area in a contiguous state.

Cost of Mobility -- $5,000 to $5,999 was reported as the median family income which would be considered necessary to be as well off financially in another community.

Mobility Problem -- Reasons for not wanting to move were: "would have to leave family," "higher cost of living elsewhere," "this is good place to raise children," "like geography of this area."

Mobility of Youth and Neighbors -- Ten indicated they would want their sons and daughters to remain in the community after finishing high school and 12 felt they should move away for better opportunities. Opinions were split 9 to 9 whether or not neighbors out of work should stay or move away.

Change of Occupation -- Twenty-one out of the 22 (95.5%) were of the opinion that it is desirable to take any kind of work if unemployed for a period of 6 months.

It is apparent that this group somewhat leans in the direction of mobility. 31.8 per cent of them desired to leave the community and an additional 18.2 per cent indicated it didn't make any difference to them whether or not they moved. In other words, 50 per cent (11 out of

22) were inclined to move if encouraged and the opportunity presented itself. This attitude toward mobility was further emphasized when 12 out of the 22 felt if they had sons or daughters they would want them to move from the community for better employment opportunities.

EVALUATION

A case study of the Wilkes-Barre power sewing machine operator program (2508.3) would not be complete without providing some idea of its effectiveness and real value. Although it has been chosen as a typical example of a Pennsylvania training for the unemployed (2508.3) program, it obviously does not exemplify in detail all such programs. Therefore, it is impossible from this one case to make inferences about other 2508.3 programs as conducted throughout the state. A study of other such programs may reveal them as good, better, or poorer than reported for the Wilkes-Barre attempt.

General

It was obvious from the start of this study that the Wilkes-Barre 2508.3 program was making a significant impact in terms of alleviating the unemployment problem. Just how great an impact as compared to other types of retraining programs, mainly the ARA (Area Redevelopment Act) and MDTA (Manpower, Development, and Training Act), will be discussed separate and apart from this evaluation. The effectiveness and end results of the Wilkes-Barre program in terms of generally conceived good practices of student selection, instruction, physical facilities, teacher selection, and so forth will be delved into here.

Before specifying in any detail the evaluation, it is important to again emphasize that study of this one program does not provide a basis for making generalities about other 2508.3 retraining efforts. Only this particular program was studied and what is said here must not be interpreted to apply to any other such undertaking.

Trainee Selection

The occupation of power sewing machine operators presents some unique problems relative to the selection of trainees. Undoubtedly, the selection process being carried out by the Pennsylvania State Employment Service is serving an important function. Considerable time and effort was exercised in testing, interviewing, and counselling potential trainees for the program. Moreover, placement (initial at least) of those who satisfactorily completed the course appears to be effectively and efficiently carried out. A spirit of cooperation prevails on the part of the school authorities and P.S.E.S. personnel which makes for a good working relationship and helps to assure a successful program.

Evaluation of the trainees by employers, however, indicates there is some feeling that selection standards may be too low and more care should be exercised in "weeding out" those who have a poor attitude toward work.

Admittedly, the selection of individuals for any retraining provides a knotty problem, however, the identification of trainees presents the single, if not crucial, key to the success of the entire program. Therefore, every possible means should be continually explored to provide the best possible material for the retraining program. Of course, the fact that there exists but one such opportunity (power sewing machine operator) to the exclusion of types of other training greatly limits the possibility of choice.

Over-all Quality

In attempting to evaluate the program, it seemed desirable to compare it with some measure of accepted standard. Therefore, it was determined to use the form developed by Pendered (1957) which provided a qualitative rating on factors of Physical Conditions;

Instructional Programs; Methods, Management and Housekeeping, and The Teacher. The sum total of all 77 items provided an over-all quality rating. The factor ratings as well as the over-all rating of the Wilkes-Barre, power sewing machine operator program, scored independently by three individuals who were well acquainted with educational practices and satisfactory conditions and maximum instructional effectiveness follow:

Factor	Per Cent - Quality
Physical Condition	65.0
Instructional Program	71.0
Methods, Management and Housekeeping	50.7
The Teacher	64.6
Over-all Quality	62.0

● The physical facilities that house the Wilkes-Barre power sewing machine program and their condition received a rating of 65.0 per cent. This rating represents a slightly above average facility in which to carry on the important task of instruction. Some of the weak features consist of:

Poor ventilation and temperature control.
Inadequate and poorly arranged storage space.
Worn out and need for new hand tools.
Worn but still serviceable power machines.
Soiled ceiling.

Probably one of the most distasteful aspects, yet an unrelated factor to carry on good instruction relative to the physical facility, was the external appearance of the structure that houses the power sewing program. The main entrance to the facility consists of an alley way, shadowy stair case entrance which immediately creates a feeling of depression. The gateway to a new learning experience, such as any retraining program represents, would do well to reflect something better than such a "cast-off" atmosphere.

In general, employers and trainees alike evaluated the physical facilities as satisfactory for the activity. Several employers indicated the need for new and up-to-date equipment; a situation that they themselves control since they supply the machinery for the course. Unfortunately for both the school and the employers themselves, several stated frankly they had never seen the facility, but expressed a desire to do so if an invitation was extended.

● The instructional program received an aggregate rating of 71.0 per cent. This is to say it was well above average in the eyes of the evaluators.

Items that received high ratings were: course aims and objectives, activities in shop suited needs and interests of pupils, course of study, lesson planning, and community resources. Items that apparently could stand some improvement were: evaluating pupil progress, and materials used (aids) in shop instruction.

● Methods, management, and housekeeping received a total rating of 50.7 per cent. General housekeeping appeared good; however, some improvement could be made in condition of stock and storage, safety procedures, bulletin board displays, audio-visual aids, methods of instruction, and personnel system.

● The teacher(s) were rated on 18 separate items and scored 64.6 per cent; the highest of the teachers rated among the three retraining programs studied. These were above average teachers with an ability to deal with the problems of adult training. However, as could be expected, their tenure and type of employment placed them in an unusual position in the eyes of the profession. Both had made concerted efforts to prepare themselves for their task by taking teacher preparation courses. One held a master's equivalent certificate. Scores in this category were high in industrial work experience, personal appearance, voice, manner, poise, interest in teaching, and the like. However, ways must be found to help these and other teachers of the retraining programs to assume more of the role of the profession through taking part in

professional organizations, reading professional books and periodicals, and in generally being accepted as an integral part of the profession. Status of this nature is, of course, most difficult to achieve under any part-time or "crash basis" type program which is presently exemplified by the approach being made to the retraining problem.

● Over-all quality of the Wilkes-Barre power sewing machine program was rated above average at 62.0 per cent. Naturally, such a rating leaves room for improvement.

Employers and trainees rated the over-all quality very good to good. However, surprising enough, several employers did not know the program well enough to feel qualified to give a rating. Certainly, as the recipient of the results of the program, one would think they would make every effort to understand and aid it in every way possible.

Employment and Placement

Program effectiveness, of course, must be measured in what it did toward making individuals employable. Initial employment (one week) after completion of the training found 96 per cent of the group employed. This represents outstanding evidence of the program's worthwhileness.

Follow-up interviews with the trainees indicated their appreciation for the assistance given them both by the P.S.E.S. and school authorities in finding them jobs. Initial employment experience do, however, point to some disallusionment as to "what it was like" to be a power sewing machine operator under actual working conditions.

It was apparent from the interviews with both trainees and employers that employee mobility (local) within the garment industry is an accepted practice. A large number of the trainees were, after three short months, working at their second or third place of employment. Job changes were attributed to such things as: "work was getting slack," "I thought I'd like the other place better," "my supervisor left and I went with her," "I could make a little more money."

Employment of the trainees at the end of three months indicated that 80 per cent of them were still in the occupation for which they had been trained, their average weekly earnings were $50.53 and they worked on the average 40 hours per week. Ninety-five per cent said they would take the same training over again if they had the opportunity. And, all-in-all, they were satisfied with the results of the course.

A Final Word

It is the opinion of the school authorities who have worked long and hard on this program that its success lies in (1) employer interest as reflected by the advisory committee, and (2) the student selection as made by the P.S.E.S. Without these two ingredients, any similar program cannot be a success.

EVALUATION

3. AN AREA REDEVELOPMENT ACT ATTEMPT

The counselor abruptly laid down his pencil and said, "You have the ability and aptitude to become a sheet metal machine operator; that's for sure! Moreover, you are eligible to take advantage of such training for a period of sixteen weeks in the new class that is being formed at the Peacock Street Vocational Shop." The discussion taking place was between a representative of the Pennsylvania State Employment Service and an unemployed adult who could not expect to secure full-time employment without training. The training being discussed fell under the Area Redevelopment Act of 1961 and was being conducted by the local public schools.

What did such an opportunity mean for an unemployed individual? To those selected for the training by proving they possess the ability to profit from it, it meant a paycheck. Yes, a weekly check for going to school; for learning a new trade. A paycheck in many cases represented the first income of an earned nature for many weeks. Furthermore, at the end of the training period there was a better than even chance there would be a job waiting. To the unemployed person, the person who had been looking for weeks and possibly months for work, this in itself was motivation to want to learn a new skill.

To be selected for retraining was indeed an opportunity for those Pennsylvanians who had become outmoded in their occupation and needed to learn new skills which were being sought after on the labor market.

THE AREA REDEVELOPMENT ACT
(Maximum 16 weeks)

The Area Redevelopment Act 1961 of the federal government is intended to help hard-hit communities to help themselves to a better way of life. Over the years, some skills have practically disappeared and new kinds of work requiring different skills have emerged. Total industries have likewise changed in terms of numbers and kind of workers needed, and industrial plants have moved location from one section of the country to another reducing employment opportunities for workers in some areas and increasing opportunities in other areas.

For those communities whose leaders and citizens are resourceful, imaginative and forward looking, the Area Redevelopment Act offers a hopeful challenge. To meet this challenge, the act attempts to bring together in a common effort local community resources, state aid, and Federal assistance.

Purpose of the Act. -- The purpose of the Area Redevelopment Act is to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically distressed areas. It calls for a continuing program providing job opportunities, study of the causes of unemployment, underemployment, underdevelopment and chronic depression. Moreover, it encourages the formation and implementation of national, state, and local programs to raise income levels and to otherwise bring about solutions to depressed area problems.

Administration of the Act is vested in the Department of Commerce. Specific

responsibilities are assigned to the Department of Labor; Health, Education and Welfare; Agriculture; Interior; the Small Business Administration, and the Housing and Home Finance Agency. There is, also, a provision providing for a Federal Advisory Policy Board and a National Public Advisory Committee on Area Redevelopment.

Determination of a "Redevelopment Area" is based on average rates of unemployment over an extended period of time. These rates cover specific geographical areas where unemployment is current 6 per cent or more and has either averaged 6 per cent or more and has been at least 50 per cent above the national average for three of the preceding four calendar years; or 75 per cent above the national average for two of the preceding three calendar years; or 100 per cent above the national average for one of the preceding two calendar years. Redevelopment areas may constitute a county or several counties in which a high number of low income families exist and a substantial or persistent unemployment or underemployment situation prevails. Such interpretation makes eligible typical rural areas in contrast to the industrial areas where the yardstick of unemployment may be rather clearly defined.

Loans are obtained from the Federal Government for the purchase or development of land and facilities including machinery and equipment for industrial or commercial usage. This may include the construction of new buildings; the rehabilitation of abandoned or unoccupied buildings; and the alteration, conversion, or enlargement of existing buildings.

The Act not only carries a provision for loans, but in some instances provides for grants for the acquisition or development of public facility usage and the construction, rehabilitation, alteration, expansion, or improvement, of public facilities within a redevelopment area. Moreover, and paramount to the study reported herein, the act provides for the training and retraining of individuals. The training provisions are intended to help unemployed or underemployed workers prepare themselves for new or different jobs. To do this, it brings together in a common effort local community resources, state aid, and Federal assistance.

Training Provisions. -- The Act contains important provisions for the training and retraining of the unemployed and underemployed so they can acquire the skills that available jobs demand. Training or experience is always an important factor in the workers ability to get a job and keep it. Therefore, courses may be offered at public high schools, vocational schools, trade schools, vocational technical schools, community and junior colleges, universities, and any other institution in which the program would be under public supervision and control. Such courses may be carried on during the day or evening and must provide for training in occupations in which there is a reasonable expectation of employment.

Selection of Trainees. -- The Department of Labor through the Pennsylvania State Employment Service has the responsibility for selecting individuals for the training. This is generally done through the local public employment offices in the community. These offices select and refer trainees on the basis of qualifications for training and on a reasonable expectancy for obtaining employment as a result of the training. The local employment office, in addition, is responsible for providing assistance in job placement after training is completed. The individual must reside in a city or county declared a redevelopment area to be eligible for selection. Moreover, he must register with the nearest local office of the employment service, and he must be willing to take tests or otherwise qualify to participate in a training program. The local employment office has the responsibility of referring individuals for training on a merit basis, and if selected the individual must attend classes regularly and perform satisfactorily.

The Type and Length of Courses. -- Courses may range from a few weeks of instruction for jobs requiring only a little pre-employment to more prolonged preparation for highly skilled work. Assuming jobs are in prospect, some examples of training courses are: (1) refresher or supplementary training in skilled trades or services such as automobile mechanics, carpentry, radio and TV, or in high-level clerical

operations such as stenography, for individuals who have already had considerable experience or training in the same or related type of work, (2) training such as automobile mechanic helper, TV and radio service helper, beginning draftsman, salesworker, or bookkeeping machine operator for individuals with a high school education or its equivalent but whose experience has been a line of work which there has been little demand, (3) training such as machine-tool operator, truck or bus driver, nurses aid, etc. for individuals without a high school education or relevant experience.

Training courses must be for occupations in which there is a reasonable expectation of employment. The length of courses is determined by the amount of training required and may vary from several weeks to several months. However, in no case shall they exceed 16 weeks in duration. If state boards for vocational education are unable to provide the facilities and services needed to conduct the training, the Secretary of Health, Education and Welfare may provide for them by agreement or contract with public or private educational institutions.

Allowances for Trainees. -- The payment of retraining subsistence benefits is administered by the Department of Labor through the same offices that handle claims for unemployment benefits. The amount per week is based on average weekly unemployment compensation payments in the particular state (for Pennsylvania this is $33 per week) for a maximum period of 16 weeks or for the duration of the course whichever is the shortest. The Act authorizes annually for the payment of 10 million dollars of subsistence benefits.

It is apparent from this brief summary of the Area Redevelopment Act that the intent is to assist local communities in solving the unemployment problem by updating the skills of its work force. Limitations of the Act, particularly the 16 week training period, mandate short intensified courses of a refresher and/or semi-skilled nature. Such limitations obviously raise a question as to how effective and efficient this training can be when measured over a longitudinal span.

Medium Term Retraining (624 hours)

Forty hours per week for sixteen weeks of training extends the opportunity to a medium length of 624 hours. What can be accomplished in this length of time? It appears from reports and records submitted by the Department of Public Instruction that the following skilled and semi-skilled trade areas would fall under this classification:

Welder
Draftsman
Aluminum sash and door maker
Stenographer (class 1 and 2)
Sewing machine operator
Production worker (shoe)
Presser (hand)
Ward attendant
Typewriter serviceman
Machine tool operator
Appliance tool operator
Automatic transmission specialist
Maintenance mechanic
Sheet and metal machine operator
Drycleaner
Spotter (general)
Fireman (stationary engineer)
Maintenance man (building)

These represent but a few of the many possible occupational classifications which are possible under the ARA Act.

Sheet Metal Machine Operator (6-94.202)

The Dictionary of Occupational Titles (1949, p. 1194) defines a sheet metal machine operator as one who "operates a number of machines used in the fabrication of sheet metal articles or equipment; performs such duties as bending pre-marked sheets into various shapes, cutting specified sizes of sheet metal into tubular or uniform covered shapes." A number of job titles correspond with the particular machine being operated such as: brake operator, hand; brake operator, machine; square shear operator; rotary-shear operator; and forming-machine operator.

THE POTTSVILLE CASE
Sheet Metal Machine Operator (Entry)

The following case is based on the ARA Legislation just reviewed. Pottsville Area School District recently completed a course in Sheet Metal Machine Operator under the provisions of this Act. As a result, the course was identified as being an outstanding example of ARA retraining effort. The writers of this report wish to acknowledge the cooperation and assistance of the Pottsville school authorities, especially Arthur E. Stabnau, coordinator of vocational education; Ray T. Bakey, manager, Pottsville Office, Pennsylvania State Employment Service; the local industries who participated in the study; Warren Mills, Jr., the teacher of the course; and the trainees who participated in the classes.

The Community

The Greater Pottsville Area is situated in the southern fringe of the anthracite coal region in Schuylkill County, Pennsylvania. The city of Pottsville serves as the county seat and hub for the surrounding area. Over 50,000 people live within a five-mile radius and 100,000 within a 10 mile radius of the city. Pottsville itself has a population of approximately 22,000 according to the 1960 census. The terrain is variable in the city located 627 feet above sea level and surrounded by mountains varying from 900 to 1200 feet.

The history of the Greater Pottsville Area is that of Schuylkill County and the anthracite industry. It was in 1790 that anthracite deposits were first discovered by Necho Allen and subsequently mined for industrial use. And it is in Schuylkill County that the largest unmined anthracite resources remain today. Hand-in-hand with the discovery and production of the anthracite industry went the building of canals, railroads, and highways which opened the County to extensive settlement. The "Black Rock" industry expanded in its production from a few wagon loads to more than a million tons in a week. The coal area of the County covers over 210 square miles.

The County was sparsely settled during the early days. Dense forests, swamp land, and marshes provided an excellent dwelling place for the Delaware Indians. The French and Indian war years (1754-1763) saw marauding Indian expeditions made up of the Shawnee and Nanticoke tribes. Fort Henry was a popular place to take refuge.

The settlers were predominently German and of German extraction. As late as 1833, when Governor Wolf sent a message to the legislature, a thousand copies were printed in English and five hundred in German for those who read only that language.

Schooling became one of the early concerns of the settlers. The first schools were built as early as 1765. Today, the Pottsville area takes pride in its public school system which consists of eleven buildings including a senior high school and one junior high school. Enrollment accounts for 3,221 pupils with an instructional staff of 128. Three parochial grade schools add another 1,371 pupils with twenty-seven instructors. Advanced education opportunities are provided for by the Pottsville center of The Pennsylvania State University; the Ford School of Business; the Pottsville Hospital School of Nursing; the Institute of Practical Nursing, Empire Beauty School, and Rembrant Beauty School.

Transportation links the area by means of thirty-one motor carriers, four of which operate terminals in the city. Rail is served by the Reading Railroad Company and The Pennsylvania Railroad Company. Five commercial airports are within one and one half hour of Pottsville with the Joseph Zerbey Airport being the largest.

The Economy. -- Growth in population and industry came about through the mining of coal. Mining and the manufacturing of machinery for

mining changed the economy of the county from that of agriculture to one of industry. Lumbering, for awhile, was a prime source of income. The mountains were originally covered with great pine trees and a fine stand of Hemlock. Powder mills, for a time, contributed to the economy of the area. Their frequent explosions provided a long and colorful history.

Railroad prosperity was tied closely to the coal industry, and car repair shops employed large numbers. Products of manufacture depicting the early years, some of which are still being produced, include: shoe manufacturing, distilled spirits, cigar manufacturing, bricks, sewing machines, and food stuffs.

The linkage of coal and iron is well-known in Schuylkill County. For almost a century, prosperity flourished because of these two commodities alone. In 1854, coal was selling at $3.50 a ton. Other prices were "high" for those times, too, and pork was 10 1/2¢ a pound and beef 12¢.

Labor unrest became common in the anthracite industry, and the rise of unionism was steady. The eight-hour day was won in a 1916 contract and the seven-hour day, five-day week in 1936. Currently, the United Mine Workers in Schuylkill County have about 20,000 members. Strip mining came into the picture around the turn of the century and in 1925 approximately 2.5% of the industry's total output was mined in this manner.

The decline of the coal industry has had a sobering effect on the area's economy. Labor continues to be one of substantial male surplus. A peak rate of 14.5 per cent of civilian labor force unemployment, one of the highest in the Commonwealth of Pennsylvania, was reached in 1959. Through self-determination, the area is fighting its way back; diversifying its industry, retraining its workers, and gradually improving the economy of the area. To say that much remains to be accomplished is a fact well known to the leadership of the Greater Pottsville Area.

The Employment Picture. -- Employment or more realistically, unemployment is tied closely with the economy of the area. A 1959 survey of the area indicates a high per cent of skilled and semi-skilled out of work. These two broad categories constitute a valuable human resource which cannot be let go to waste.

A more recent survey conducted by the Department of Public Instruction (Survey report 1960) further indicates a predominent need for skilled workers in the sixty-six industries who took part. Both the need for skilled workers and their supply is of paramount importance to the future of the area.

Fabrication of metal products appears to be on an increasing employment trend in the Pottsville labor market area. Table 4, besides showing an increase of 1600 in the total work force, shows a 300 increase in fabrication of metal products industries compared with a year ago. As can be seen, mining continues its downward spiral with a decrease of 100 when compared to the same month a year previous. Unemployment as a per cent of the available civilian work force in the Pottsville area stood at 12.7 per cent in February 1963 as compared to 13.7 per cent in February 1962. This net reduction of 1 per cent represents a major effort on the part of those individuals who are seriously concerned over the economic picture. Current unemployment is said to stand at a 9,300 figure.

Fabricated metal products industries remained steady in their unemployment throughout the years 1960 and 1961, whereas both the U. S. and Pennsylvania totals were decreasing, Table 5. Current information indicates an increase of approximately 200 workers in the fabricated metals area over the figures reported.

Medium Training Needs (624 hours). -- The sheet metal machine operator occupation, when placed on a skill level continuum, stands somewhere between that of semi-skilled and skilled. This is to say, the sheet metal machine operator needs to possess more manipulative ability and more related knowledge than the semi-skilled individual, yet less of these two factors than the highly skilled. To acquire such a level of skill, training of a medium length and breadth is essential.

All males do not possess the aptitude and metal ability to achieve such a level of skill. For those who do, and are motivated to the level of occupational endeavor, training of

a 16 week duration as provided by the ARA Program seemed ideal.

Analysis of the required operations necessary to the sheet metal machine operator occupation dictated the need for a 624 hour training duration. This is near the maximum of 640 as normally provided for under the Act and the objectives of the Pottsville program.

How the Needs Were Determined. -- It is obvious from the community spirit described throughout this report, the plight of the unemployed did not go unrecognized for long. The Greater Pottsville Area Development Corporation and the Chamber of Commerce have been for some time making an effort to create new payrolls and job opportunities. The slow but steady rise of fabricated metal products industries in the Greater Pottsville Area can largely be attributed to the initiative of these two organizations. In addition, local school authorities were quick to pledge their support and training know-how. When soliciting new and expanded industries, training opportunities as provided by the Pottsville Area School District are held out as an added incentive.

It is no wonder, then, that a spirit of cooperation prevails. Therefore, it proved rather easy to conduct a survey of sheet metal machine operator needs among the existing industries. Results of this survey indicated an immediate or future need for approximately 80 individuals who possessed ability and knowledge of sheet metal machine operation.

The Program

In 1952, gloom was cast on the Greater Pottsville Area. People spoke of it as "blighted," "depressed," and "doomed." The last quarter century was one of decline in industry, labor, and business. Civil, business, and school leaders did not stand idly by, however. Efforts were being made to revamp and restructure the economy, the industrial, and the manpower resources.

The public schools recognized the need for vocational training, and the building of a new high school in 1933 included the present vocational training facilities. Through this effort, high school programs in auto mechanics, carpentry, machine shop, and electricity were established. From these sources approximately 55 high school students are presently being graduated each year. Adult evening classes have been conducted in an ever widening variety of subjects over the years. It was not surprising, then, to find the school authorities of the Pottsville Area School District making available, to the people of the area, the benefits of the Area Redevelopment Act.

Approval for the establishment and operation of a sheet metal machine operator program was granted by Mr. Willard Wirtz, Secretary of Labor, U. S. Department of Labor, Washington, D. C. in a letter dated December 22, 1961. The first section of this course was conducted for a period of sixteen weeks with a second section running from July 1962 to November 17, 1962. Approval to commence the retraining job represented the end result of much detailed planning and hard work on the part of a number of individuals and organizations. Under the provisions of the Act, an Advisory Committee had to be formed, the need for the training clearly established, and a reasonable assurance of employment had to be substantiated. Paper work had to be completed setting forth the entire program plan. Leadership for the task was mainly vested in the competent hands of the Pottsville Area School authorities and Employment Service personnel. The Area Occupational Training Advisory Committee, consisting of 13 individuals representing labor, management, and the public, put their shoulder to the task and one by one the hurdles confronting the program establishment were eliminated. Through the committee's act of participation, a survey of employer interest and employment prospects was completed. Planning was effected and survey data completed and facts pointed to the need of such a retraining program.

The intent of the training was to develop skills in the operation of brakes, forming presses, spot-welding machines, a knowledge of metal characteristics, blueprint reading, and metal shaping; all in keeping with requirements as set by industry. The plan called for the identification of twenty individuals for each of two sections who could be trained to the desired proficiency of a sheet metal machine operator. Classes were established for five days a week, eight hours a day for a sixteen week period.

The Pennsylvania State Employment Service was the agency responsible for searching out and identifying those individuals from their unemployment rolls who possessed ability to absorb the training. Their General Aptitude Test Battery (GATB - B-329 factors G, S, P, and M) were used in this process. By combining a program of testing and interviewing, each

selected trainee was assured a better-than-average chance of successfully completing the program.

Placement, too, became a responsibility of the PSES. The initial survey of employment opportunities provided a measure of need so an accurate prediction could be made without "flooding" the market. Recent establishment of a number of sheet metal fabrication industries, several of which are nationally recognized for their cabinets and panels, provided employment opportunities for trainees.

Ninety-five per cent of the first section of the program were placed with little difficulty. Due to a cancellation and slow down of orders, second section placement proved a knottier problem. In the main, those completing the program secured jobs either as sheet metal machine operators or in related fields. Several cases were reported, where an entrance occupation had to be taken until seniority enabled the employee to move into the higher skilled level.

With the close out of the second section of the sheet metal operator program, the training in this area was terminated. At least for the immediate future, the supply of sheet metal machine operators in the Greater Pottsville Area had reached the demand. Employers appear grateful for the training program as do the trainees. The vast amount of effort that went into the planning and execution of the program apparently was well worthwhile. Training of this type (medium in length) does, however, constitute some special problems which are discussed in the section on evaluation.

Developing the Curriculum. -- The training of sheet metal machine operators constituted a new educational endeavor for the Pottsville Area School authorities. All facets of the program had to be studied and planned, i.e., physical facilities, teachers, curriculum and so forth. Experience throughout the years has proved the value of using an advisory committee for such an undertaking.

A thirteen-member advisory committee composed of representatives of labor, management, the PSES, school authorities, and the public was organized. Officially known as the Pottsville Area Occupational Training Advisory Committee, this group actively participated in the planning, consultative, and advisory phases of the entire program.

Development of the curriculum constituted a major undertaking. After much analysis, the following course was agreed upon:

SHEET METAL MACHINE OPERATOR COURSE

Topic	Hours
A. Use of Measuring Tools	10
B. Use of Layout Tools	20
C. Simple Math	10
D. Simple Locations on Flat Material	10
E. Locations on Bent Material	25
F. Bending Layouts	20
G. Safety	10
H. Cutting by Machine	65
I. Cutting by Hand	20
J. Punching and Notching	100
K. Bending by Hand	50
L. Bending by Machine	300
M. A. R. Bending	15
N. Spotwelding	50
O. Drilling and Topping	45
P. Portable Power Grinder	20
Q. Projects	35
TOTAL	800 hours*

* Later revised to 640 hour total.

Planning and Installing the Facility. -- Classroom and shop space was available for training purposes, but equipment was limited and needed to be procured. The facility consisted of a somewhat antiquated, but useable, NYA (National Youth Administration) industrial type building which was constructed in the early thirties. Throughout the intervening years, this facility had been used for veterans training, vocational school, and now ARA classes. Figure 7 shows the floor plan and arrangement of equipment.

Equipment mounting to an estimated $60,000 was used in the program. Instead of

FIGURE 7 -- SHEET METAL MACHINE OPERATOR FACILITY

purchasing the equipment, it was rented at a cost of $2,500. This decision was made because the program was to be one of a terminal duration.

The Teacher

Upon the recommendation of the Advisory Committee, a teacher was recruited directly from industry. The individual selected for this position had to possess unquestionable mastery of the skill being taught as well as the necessary patience and understanding to be a teacher.

Agreement was reached to release, on a leave basis, a foreman from one of the nearby companies who had 21 years of experience in the sheet metal fabrication industry. Such an arrangement did not jeopardize this individual's employment and since he was actually paid more than he would have received had he remained on the job, the arrangement suited both parties. Preparation for the teaching assignment consisted of a ten clock hour teaching course.

It is felt by those who supervised the Pottsville program that the following minimum requirements should be adhered to in selecting a teacher. In addition, certain teacher education topics should be provided through formal teacher training courses to assure success.

MINIMUM TEACHER QUALIFICATIONS
Retraining Program (ARA)

Formal education	High School Graduate
Experience	6 years in the occupation
Teacher Preparation	A minimum of 10 clock hour course in teaching techniques
Certification	The basic certificate (emergency)
Personal Qualities	Ability to work with and handle adult groups

DESIRABLE TEACHER EDUCATION TOPICS[1]

Organizing the Class
Planning the Instruction
How We Learn
How We Teach
Oral Presentation
Demonstrations
The Art of Oral Questioning
Teaching Aids
Guiding Individual Performance
Testing
Grading
Self-Evaluation

[1]Department of Public Instruction, Teaching Vocational Education Subjects, Harrisburg: Commonwealth of Pennsylvania, 1960.

The point should be emphasized that the Advisory Committee serves as the best single source of teacher recruitment. Other sources would include:

- Graduate from teacher training programs
- Retirees from armed services (many of these retire at an early age)
- Industrial personnel who can be granted leaves of absence
- Graduates from a similar program who have had experience in industry
- Representatives of manufacturers associations whose services are available for putting on short courses.

Selection of Trainees. -- All the trainees for the program were selected by the Pennsylvania State Employment Service. Employer requirements were ascertained and job orders analyzed and written. The following standards for selection of trainees were used:

Male, age 18 to 40
Unemployed and/or underemployed

Preferably a high school graduate
Mechanical inclination as indicated by past work experience
Receptive to training
Satisfactory scores on GATB on B-329 factors, G, S, P, M

Perference was given to applicants who had some previous training or experience in the occupation. In a few instances, applicants had been employed, i.e., helper, brake operator and helper, press operator, and were interested in developing fuller skill. No preference was given to younger applicants and the age distribution ran from 20 to 48 years.

Final selection was made only after the above criteria were met and confirmed by a counselling interview.

possess the following general characteristics as measured by the California Test of Mental Maturity (Short Form) and the Sims SCI Occupational Rating Scale:

The characteristics in Table 6 are probably somewhat typical of the average sheet metal machine operator.

Depth Interviews. -- In order to "get to know" each trainee, a depth interview of approximately one hour duration was conducted with each trainee by the authors of this study. The first half, a preliminary interview, was conducted at the site of the training. Approximately three months later, the second half, or follow-up interview was held either at the place of employment or at the home of the trainee. The sum total of these interviews revealed the following information about the group:

Table 6
GENERAL CHARACTERISTICS OF SHEET METAL MACHINE OPERATORS

Characteristics	Findings
1. Mean chronological age	27.2 years
2. Mean grade placement	9.2 years
3. Mean I.Q.	92.2
4. Normal population I.Q. compared	30.0 percentile
5. Social status (self perceived)	Worker

The Trainee

The ARA Act requires the selection of trainees to be made by the Employment Service. The process used by the Pennsylvania State Employment Service, through their local offices, involves testing and counselling with eligible individuals. This procedure has proved satisfactory, however; the school authorities reserve the right to eliminate any of the trainees if they prove unsatisfactory throughout the training period.

General Characteristics. -- Investigation by the authors of this report found the trainees to

- Personal Characteristics

Personal characteristics of the Pottsville sheet metal machine operator trainees are as follows:

Age -- ten of them were under 25 years of age with the oldest being 35. The median age of the group was 21.5 years.

Residence (local) -- Twelve of them had been life members of Schuylkill County. The remaining two claimed 6 years and 1 year

residence in the same community.

Residence (state) -- All fourteen of the trainees were born in Pennsylvania. None migrated into the state.

Marital Status -- eight were single and six married.

Social-economic Status -- All fourteen placed themselves in the working category.

Living Accommodations -- seven lived with their parents, five rented, one was making payments on a house, and one had a home provided by relatives.

Relatives -- All had relatives living in the area. The smallest number was one and the largest was 88 with a median of 77.

The training program was made up of a relatively young group with 71.3 per cent of them being 25 years of age or under. This seems to underscore the plight of unemployment among Pennsylvania's younger population. Moreover, all of the group (100%) were native Pennsylvanians. Obviously then, the problem of retraining at this level (ARA) is one from within the state itself and has not been made by any population influx. Eight of the trainees being single and six married emphasizes the fact that unemployment is contagious irrespective of marital status. Strong family ties are reflected by the large number of relatives the trainees have in the immediate community. One had a total of 88. Seven of the trainees lived with their parents which reinforces the family tie argument which in turn may reflect in a desire to remain in the local community regardless of employment opportunities.

- Family Characteristics

The trainees' family characteristics appear as follows:

Household Members -- Nine trainees came from households with four or more members. All in all, a total of 58 household members are found among the group of fourteen trainees. This represents a mean of 4.1 per trainee.

Youngsters in Household -- There are a total of sixteen youngsters found in the homes. Four came from households having two members 16 years of age or under, one with four, one with three, and one with one.

Certainly the families of the trainees cannot be considered overly large. The somewhat surprising young age of the trainees reflects a fair number of youngsters as members of the households who are 16 years of age or under. The assistance these youths are making toward the family income is discussed in a following section.

- Socio-economic Origins

Social economic origins of the trainees appear as follows:

Father's Occupation -- Five of the trainees had fathers who were employed the majority of their lives as craftsmen, and 5 were non-farm laborers, 2 were operatives in a factory, 1 was a route man, and 1 was identified as unemployed.

Socio-economic Status -- Seven of the fathers' occupations could be classified working, 4 as lower-working, and 2 as middle-working.

Of the 14 trainees, almost a third of them came from parental backgrounds of craftsmen. Another third from families of non-farm laborers.

- Employment Status of Family Members

The employment status of family members is reported as:

Number of Family Members (over 14 years) not going to school -- A total of 28 individuals or 2 for every trainee were reported as being over 14 years of age, not going to school, and at home.

Family Members Employed -- A total of 14 members of the household were reported employed full-time and 1 part-time. This represents 50 per cent of the family members 14 years or over being employed in some capacity or other.

It appears that those family members of trainees who are eligible for employment are making an effort to augment the family income.

- Employment History

The employment history of the trainees appears as follows:

Number Times Employed -- Three of the trainees (22%) had never been employed before. The remaining 11 had held from 1 to 3 jobs and 1 had been employed over 3 times.

Location of Employment -- Eleven of the trainees had all of the previous employment experience within the local community, 2 within the state, and 1 outside the state.

Type of Previous Employment -- Sixty-nine per cent of the trainees had their previous employment experience as unskilled workers and 31 per cent as semi-skilled. None could be classified as having held highly skilled jobs.

Distance from Home -- The median distance of previous employment from home was 1 to 5 miles.

Wages Earned -- Previous employment wages were most frequently reported from $40 to $59 per week.

It is obvious that the work history of the trainees has been somewhat erratic. Moreover, most of their employment history has been with the immediate community and of an unskilled nature.

- Previous Training

Previous training reported by the group appears as follows:

Number of Times Taken -- Half of the group (7) had received some type of training previously.

Helped Get Job -- Three out of the 7 reported the training helped them get a job. In 2 of these 3 cases, the training itself lead them to look for work in another city.

Length of Course -- Four reported their previous training to have lasted from 9 to 16 weeks in length. One reported it to last 17 to 26 weeks, and one over 52 weeks.

Type of Training -- Two were trained as mechanics, one in food service, one in business skills, and one in business machine repair.

Results -- Two received better pay and promotions as a result of the training, two learned new skills, and two reported no tangible results.

It is somewhat surprising to find 50 per cent of this group claiming they had taken some sort of occupational training previously. The results were not too outstanding, however, since only two reported receiving better paying positions.

- Educational Background and Values

The educational background and values held by the group are obviously reflected in their ability to achieve success in their present endeavor. For this reason, the description of the group relative to this report is extremely important.

Formal Education -- Eight of the trainees (57.1%) completed high

school, and six did not.

Educational Achievement -- Nine of the 14 reported that they had done about as well as most other students while in school. The group as a whole had a 92.2 I.Q. on the California Short Form Test of Mental Maturity and a grade placement of 9.2.

Favorite Subject -- Six professed to hold subjects such as physics and chemistry (physical sciences) as their favorite. Four manual (industrial education), 1-langugage, and 1-social studies were also declared favorite. In the main, best grades were claimed in these subjects, although 10 trainees said they received high grades in physical education.

Higher Education -- One trainee reported he had enrolled in college but did not graduate. Three thought about going to college. The most frequent reason for not going to college was "financial."

More Education -- Nine out of the 14 would have availed themselves of more education if they had it to do over again. Of this number, four would choose high school; two, trade school; two, college; one, business school; and one, post education of some kind.

Educational Values -- The group shows some mixed feelings on the question, "Is it okay to quit school before finishing high school?" Relative to boys, 6 said "yes" and 6 said "no" to this question. Answers for girls produced 5 "no's" and 7 "yes's". When the "yes" answer was given, it was usually qualified with an "it depends" response. When asked, "How far will those youth in your family or neighborhood go in school?", the response was somewhat different. For boys, 13 responded they would go through high school with 3 college bound. Twelve thought the girls would finish high school and one indicated a desire to see girls complete both high school and college.

Cultural Values -- All of the trainees claimed to regularly read at least one newspaper. Four read both local and out-of-town papers and one read more than one local paper. Four did not read any magazines regularly, and three did not watch TV to any extent. Two out of five did not know who was the governor of Pennsylvania although this was an election year. Ten did not know the names of their congressman, but ten knew the name of the largest employer in the community.

Societal Values -- Twelve belonged to a church, four to some sports or hobby clubs, one to a union, and one to a volunteer fire department. None belonged to a PTA, lodge, or political club. The 14 trainees currently belonged to a total of 24 organizations with six belonging to one, two belonging to two, two belonging to three, and two belonging to four. Only two trainees had belonged to additional organizations (one each) in the past four to five years in which they did not currently hold membership.

The preceding picture of the groups' educational background and values appears somewhat clouded. The group reflects a desire for more education for both themselves and those youth with whom they are acquainted. They indicate, if they had it to do over again, they would get more education. Yet, the cultural and societal values that they have at their disposal are grossly ignored. They do not read much of anything, they don't belong to any great extent to community organizations and groups, and they apparently are not keenly interested in watching television. Real questions could be asked as to how leisure hours are spent and to

what degree there is a sincere quest for self-improvement.

- Aspirations and Occupational Mobility

The trainees reported the following aspirations and mobility attitude:

Aspirations for Sons and Daughters -- 9 of the trainees had sons or daughters. Of this number, 5 held aspirations for them to achieve a middle or upper socio-economic status. This is to say, to be employed in a profession such as engineer, doctor, nurse, etc. The remaining 4 parents indicated it was entirely up to their son or daughter what level they achieved.

Self Aspirations -- Nine of the 14 trainees admitted holding desires for some other kind of work than they either had been doing or for which they were being trained. Seven of these 9 felt that sometime they may achieve this ambition.

Mobility versus Retraining -- When asked, "Which is more difficult to move to a community where there are jobs, or to stay in the same community and learn a new occupation?", 9 indicated the latter was more difficult. In other words, it is harder to stay and learn a new occupation than it is to move to where there are job opportunities.

Returning to Old Occupation -- Four out of 10 felt there was no opportunity for them to return to their old line of work even if economic conditions improved. This was in spite of their good health and physical condition.

Mobility of Residence -- Twelve out of the 14 indicated they expected to be living in their same community five years from now. The 2 who indicated a move gave reasons of, "no opportunity here," and "not liking the community."

Encouraged Mobility -- If given encouragement and a free choice to move, 6 of the trainees would move and 8 would remain in the community where they now live. Only 1 of the 6, who indicated a desire to move, indicated preference for another state.

Cost of Mobility -- Nine of the group didn't have any idea of how much annual income would be necessary to provide comparable living as they were now experiencing. Of those who answered this item, (5), it appears a mean annual income of $5,000 would be required.

Mobility Problems -- Reasons for not wanting to move were: "would have to leave parents," "hate to leave friends and relatives," and "higher cost of living."

Mobility of Youth and Neighbors -- The group indicated 8 to 6 that the youth would be better off if they left the community after completing their education. In fact, 7 provided an unqualified recommendation to have their own son move away and an additional 4 felt the same way but in a qualified sense. Moreover, 9 of the group (64.3%) felt that their neighbors who were out of work should move to other communities to get employment.

Change of Occupation -- When asked whether or not it is desirable for a man to take any kind of work if out of a job for 6 months or longer, all 14 expressed any kind of work was better than nothing. In a like manner, 11 out of the 14 approved of wives working if the husband could not find work but she could.

The preceding description of the group's aspirations and occupational mobility reflects one of despair. For example, they strongly

express the need for mobility in their youth to the point of recommending outmigration because of a lack of opportunities. Yet, for themselves, even though they possess probably as most individuals do some hidden ambitions, they see no future even if they themselves become mobile. Only 2 of the group made outright statements as to their desire to leave the community. A further point seems to indicate when faced with the difficult decision of learning a new occupation or moving, although the former seemed the most difficult to do, they preferred to learn the new occupation. This certainly makes for a difficult choice.

EVALUATION

The case study of the Pottsville sheet metal machine operator offering (ARA) necessitated delving into its value and effectiveness. Here too, as with the 2508.3 program, the results cannot be used as generalizations for other ARA program endeavors. Others may be as good, better, or poorer than reported for the Pottsville attempt.

General

The effort being extended in Pottsville by the school, P.S.E.S., industry, and lay leaders to combat unemployment through retraining of the unemployed is indeed commendable. Employers and trainees alike expressed their appreciation for the program. Job opportunities in the Greater Pottsville Area are expanding upward to a higher skilled level. As reported from interviews with employers, recent difficulty had been in filling jobs of a technical and skilled craft nature. Retraining can help fill this need.

Trainee Selection

The selection of trainees for the Pottsville sheet metal machine operator program provided a challenge for the Pennsylvania State Employment Service. Apparently, this organization carried out their function to the very best of their ability and made a conscientious effort to identify individuals who (1) wanted to be retrained, and (2) could profit from the instruction. There is but a slight indication that payment for taking the training (training allowance) was central to the desires of some trainees. This is to say, without payment some of the trainees would not have been at all interested in taking the training.

Nevertheless, the cooperative spirit and close working relationship between school authorities and the P.S.E.S. was obvious and those who were selected certainly stood a better chance of being able to master the training.

Evaluation of the trainees by employers indicated they were of the opinion that selection standards were about right. A poor attitude toward work was reported on several occasions by employers. This was also reported by the teacher for a couple of the individuals while taking the training. An attempt to measure "work attitude" as a variable as an entrance requirement for a retraining program might be well considered and delved into as part of the selection process. Attitudinal measurement is admittedly a knotty problem, however, the change of attitude may, in some cases, be more important to prospective trainees success than the actual development of new skills.

Overall Quality

Here again the form for over-all program evaluation developed by Pendered (1957) was used. This instrument provided a qualitative rating on factors of physical conditions, instructional program, methods, management and housekeeping, and the teacher. The sum total of all 77 items provided an over-all quality rating. The factor ratings as well as the over-all rating of the Pottsville sheet metal machine operator program, as scored independently by

two individual's who were well versed in educational practices and satisfactory conditions for maximum instructional effectiveness follows:

Factor	Per Cent Quality
Physical Conditions	60.4
Instructional Program	69.5
Methods, Management, and Housekeeping	56.7
The Teacher	56.6
Over-all Quality	59.3

● The physical facilities and their condition for conducting the Pottsville sheet metal machine operator program received a rating of 60.4 per cent; the lowest of the three programs studied. Although the best facility available at the time, an antiquated and shabby N.Y.A. (National Youth Administration) structure, it left much to be desired in way of achieving a proper educational setting in which to conduct the program. Some specific weak features were:

Range of temperature of shop.
Lighting, in some locations, inadequate.
Soiled walls and ceiling.
Operator of one machine working in danger zone of another machine.
No non-skid floor covering protection.
Equipment worn, but serviceable; 75% in satisfactory operating condition.
Condition of hand tools; some sharp, many dull.

Again the physical facility used for this program provided an atmosphere of a "crash" arrangement but was the best at hand. A question thus could be raised, "Under more ideal educational conditions would the effectiveness of the program have been appreciably improved?" The evaluators are of the opinion the handicap under which the program was carried out was indeed great. In support of this statement only 21 per cent of the trainees felt the equipment was satisfactory, both in amount and type.

● The instructional program received a rating of 69.5 per cent. This reflects an above average evaluation.

Items that received high ratings included: course aim and objectives, activities in shop suited needs, course of study, and lesson planning. Items where there could have been improvement were: instructional techniques, i.e., development of safe working practices, study of working conditions, use of reference books, instruction sheets, trade literature, and evaluation of trainee progress.

● Methods, management, and housekeeping was rated at 56.7 per cent. The general housekeeping appeared good. However, some improvement could have been made in condition of stock racks, storage, finishing area, tool panels, safety guards, bulletin board, variety of methods used in providing instruction, and methods of stimulating student motivation. It appeared the student interest was not constant and often quite low.

● The teacher was rated on 18 separate items and scored slightly above average at 56.6 per cent. This individual, although not specially trained in pedagogy, performed well in the situation. Nevertheless, if maximum effectiveness of instruction was to be realized, improvements could have been made such as: preparation for teaching, command of English, enthusiasm, interest in trainees, professional interest and the like. The industrial work experience and knowledge of the subject of the teacher were considered excellent. Ability to provide instruction, however, is of importance and can only be acquired after similar preparation. The "part-time" teacher, as necessitated by a crash approach to retraining raises a serious question as to maximum instructional effectiveness.

- Over-all quality of the Pottsville sheet metal machine operator program was rated at 59.3 per cent. This naturally suggests there was room for improvement. Employers rated the trainees as "good" which speaks highly of the quality of the program. Definite concern was, however, expressed by employers that work attitude was a short-coming among several trainees. Possibly more could have been done along this line.

Employment and Placement

Program effectiveness is, of course, measurable in terms of what happened to the trainees after completing the course. Initial employment was not highly successful. Only 59 per cent of the trainees were placed on jobs, and then it took on the average of 17.2 days for placement. This does not represent outstanding success for those who sought job opportunities through the retraining program.

Follow-up interviews with trainees indicate their unhappiness over the situation. For those who were placed and still working approximately three months later, only 1 individual (6% of the group) was actually working in the occupation for which training was given. In addition, 9 individuals were working in what might be called a related occupation and were waiting to move into a real sheet metal machine operator spot. The delay in several cases was caused by probationary periods and labor agreements which required acquisition of seniority. Transfer of training to other job opportunities requiring similar mechanical ability appeared lacking. Apparently, the limited breadth of training did not make such transfer possible. Employment of the trainees at the end of three months indicated that those working were making an average weekly wage of $65.40 and an hourly wage of $1.59.

Only 57 per cent of the trainees said they would take the same course over again if they had the opportunity. This reflects their strong disappointment in the end results after a 16 week endeavor which taxed the best efforts of many individuals to organize and conduct the program.

A Final Word

It is the opinion of the school authorities that the major pitfalls in attempting to carry out such an undertaking are: finding the time required to organize such training programs when other duties and responsibilities are also pressing, the vast amount of "red tape" required for operation of the program; the difficulty in finding adequate physical facilities and equipment; getting a good teacher; utilizing community resources, selection of students who can profit from the instruction and lack of uniform policies as set by state agencies relative to rules and regulations of class attendance.

EVALUATION

4. A MANPOWER DEVELOPMENT AND TRAINING ACT ATTEMPT

A middle aged man, with fixed attention upon his face, watched the hot metal chips curl from the tip of the cutting tool. His keen sense told him the cut was about correct for the type of steel. A few months ago, this same individual had been employed as a maintenance man in a small plant. When his employment terminated, he faced an important decision; whether to uproot his family and move to a new location where he could continue being a maintenance man, or whether to seek training in a new occupation and learn new skills so as to be able to stay in his life-long community. His choice, although he considered it the most difficult of the two, was to remain and learn a new skill.

The course, in this particular case, was one in machine tool operation. This meant learning how to operate precision machinery that could shape metal to a thousands or even a 1/10,000 of an inch. To be retrained for such a highly accurate occupation has provided long sought after opportunities for a number of unemployed individuals who are mechanically inclined but who never had the chance to learn such skills.

THE MANPOWER, DEVELOPMENT AND TRAINING ACT

It has been said that the Manpower, Development and Training Act of 1962 constitutes a milestone among legislation in behalf of working men and women of our country. President Kennedy said when he signed the measure into law, "It is perhaps the most significant legislation in the area of employment since the historic Employment Act of 1946." Secretary of Labor Goldberg lauded the act by stating, "The Act will make possible the training of hundred of thousands of workers who are denied employment because they do not possess the skills required by our constantly changing economy. Their training is important both to them as individuals and to the economic health of the nation."

Purpose of the Act. -- The Act is prefaced by the statement, "There is a critical need for more and better trained personnel in many vital occupational categories including professional, scientific, technical, and apprenticeable categories; that even in periods of high unemployment many employment opportunities remain unfilled because of the shortage of qualified personnel and it is in the national interest that current and prospective manpower shortage be identified and that the persons who can be qualified for these positions through education and training be sought out and trained." The Act provides for operation of training programs from July 1, 1962 to June 30, 1965. Programs begun prior to June 30, 1965, however, may be continued to December 30, 1965. There is no cost to trainees for any training received under the Act. Prior to June 30, 1964, 100 per cent of the training programs for unemployed persons will be paid by the Federal Government through the Department of Health, Education, and Welfare. However, the Federal Government will pay only 50 per cent of the cost with respect to other than unemployed persons and the States will pay the other 50 per cent. After June 30, 1964, the states are required to match both institutional training costs and training allowance payments on a fifty-fifty basis.

More specifically, P.L. 87-145 provides for three separate titles: Title I.

Manpower Requirements, Development, and Utilization; Title II. Training and Skill Development Programs; and Title III. Miscellaneous and Reporting. Title II is of major importance to this study and is, therefore, the only one treated in some detail.

Title II, Training and Skill Development Programs

The Act stipulates a program of direct action is to be undertaken under Title II. This part of the Act authorizes a program of training workers for job opportunities that have been found through a research program and through other means such as labor market surveys.

Training Provisions. -- As required under the Act, the occupations for which training will be offered are those in which there are employment opportunities. The State Employment Service plays a key role in checking with employers to find out the present and prospective needs for trained workers. After selection by the local office of the State Employment Service, the trainee is referred to a specific vocational training course or to an appropriate on-the-job program or some combination of both.

Those To Be Trained. -- In order to be eligible, trainees must be classified in one of the following categories: (1) unemployed, (2) working below their skilled capacities, (3) working substantially less than full time, (4) working less than full time or unemployed because their skills have become, or are becoming, obsolete, (5) members of farm families with less than $1,200 annual net family income, (6) sixteen years old but not yet twenty-two and in need of occupational training and further schooling.

Selection of Trainees. -- The State Employment Service is responsible for providing a program of testing, counseling, and selection of those individuals who can qualify by being unemployed and underemployed workers, farmers, and youths. Furthermore, the State Employment Service is charged with providing counseling and placement services to those who have completed training programs and are responsible for terminating allowances and subsistence if trainees do not have satisfactory attendance records or are not doing satisfactory work in training courses ... such persons cannot be reinstated before a one year lapse of time.

The Type and Length of Courses. -- Specific vocational training courses are under the supervision of the Secretary of Health, Education, and Welfare and the various Departments of Education of the States. On-the-job training courses may be set up by states, private or public agencies, employers, trade associations, labor organizations, and other industrial and community groups. Maximum duration of training courses cannot exceed fifty-two weeks.

Allowances to Trainees. -- Eligibility for allowances (not to exceed one year - 52 weeks) is established under the Act for those individuals who meet the following: (1) are unemployed, (2) have at least three years experience in gainful employment, and (3) are the head of a family or household.

The amount of the regular training allowance is generally the average of payments of State Unemployment Compensation (in Pennsylvania the rate is $35 per week). In addition, it is possible to qualify for transportation and subsistence allowances when training facilities are not located within commuting distance of regular place of residence. The subsistence allowance may not be more than ten cents per mile. Training allowances are available for unemployed young people who are 19 and under 22 years of age and who would not qualify for the regular training allowance as indicated above. This youth training allowance cannot exceed $20 a week. In no case will youths, sixteen to eighteen, be eligible for allowances.

In the final analysis it might be said that the Manpower, Development, and Training Act of 1962, through its programs of research and training, provides our nation with the most far reaching program of manpower development yet realized. The Act as initiated provides a "crash program" which, if fully pursued and soundly established, could conceivably result in a permanent and longitudinal attack on the

nation's manpower needs.

The Field Oriented Retraining (1,560 hours)

What can be accomplished in 1,560 hours of training? It appears from the records of the Department of Public Instruction that MDTA legislation has provided for the following high skill training.

Statistical quality control assistant
Mechanical draftsman
Electronics mechanic
Operating room technician
Tailor (retail store)
Automotive mechanic
Auto body repairman
Welder (combination)
Welder (inert gas)
Sheet metal worker
Appliance repairman
Instrument man
Refrigerator repairman
Machine tool operator
Office machine serviceman
Sewing machine serviceman
Clerk, stenographer
Template maker
Restaurant cook

Machine Tool Operator (6-78.905)

A machine tool operator general (machine shop) is one who works from blueprints and drawings to set up and operate various machines such as engine lathes, drill presses, grinders, shapers and milling machines; makes adjustments on machine after positioning part, uses micrometers, calipers, verniers, gauges and other precision making instruments; works to close tolerances, works on aluminum, brass, cast iron, copper, stainless steel, and high speed steel; is required to compute angles by using trigonometry; uses the fundamentals of time and motion study; and must understand the differences between high speed and carbon steels. Moreover, this individual will be required to produce custom work rather than production.

THE PHOENIXVILLE CASE
Machine Tool Operator (general)

The following case is based on the MDTA legislation just reviewed. Phoenixville Area School District has recently completed a course in machine tool operator (general) under the provisions of this act. Even before the course was completed, it was identified as being an outstanding example of MDTA retraining effort. The authors of this report wish to acknowledge the cooperation and assistance of the Phoenixville school authorities; in particular Ray Straub, Director of Vocational Education; Minnie C. Shaw, Manager, Norristown Office Pennsylvania State Employment Service; the local industries who participated in the study; Robert Kozach, the teacher of the course, and the trainees who participated in the class. Figure 8 depicts the machine tool operator (general) skill.

The Community

Phoenixville lies in the northeastern section of Chester County in close proximity to the Pennsylvania Turnpike. Its borderline location places it contiguous to the Central Montgomery complex of Norristown, and Philadelphia. Within a one hundred mile radius of this area, approximately one sixth of the entire population of the United States reportedly resides. The borough of Phoenixville boasts a 1960 census of 13,797. The school district population incorporates a somewhat larger population of 14,700. The terrain is rolling farm country.

The history of the area reflects the influence of William Penn dating back to the year 1704. Originally settled by the Lenni Lenape Indians, the land was purchased honorably from

them. Early settlers included Dutch, Germans, Swedish, Welsh, and English as well as southern European immigrants. Colonial merchants and military men traversed the area during the frontier days. The area is rich in Revolutionary War history with Washington's army encampment (Valley Forge) nearby. Phoenixville marks the most westernly penetration of the British regulars in Pennsylvania during the revolution.

Following a decree in 1682 by William Penn that the Governor and Council, "shall erect and order all public schools and encourage and regard the authors of useful science and laudable inventions," education became a strong force in the guidance and cultural development of youth. Today, besides a strong and outstanding elementary and secondary school program, the area boasts more than adequate opportunities for education beyond high school. Within a short 35 mile radius lies the higher education opportunities of the entire Philadelphia area, a portion of which includes the Pennsylvania State University, Temple University, La Salle University, Villanova University, Spring Garden Institute and Drexel Institute. In addition and close at hand are found West Chester State College, The Penn State University Commonwealth Campus, and Williamson Trade School.

Three great seaports are close by: New York within 91 miles, Philadelphia 17 miles, and Baltimore 88 miles. A vast network of highways and railroads branching out in all directions and ease of access to the great Pennsylvania Turnpike makes the area a hub in land transportation. The Reading, Pennsylvania, Philadelphia and Western Railroads serve the area as well as two interurban bus lines and three private airports.

The Economy. -- The area has always been divvesified with industrial skills and never a "one industry area." Leading products are beverages, carpets, chemicals, drugs, coke, iron, industrial equipment, lumber, mill work, mine and quarry products, paper, plastics, printing, steel, rubber, textiles, and many others. Phoenixville proper refers with pride to the Phoenix Iron Company founded in 1783, the firm of Griffith, Smith and Hill, famous for its Majolica China and McAvoi Vitrified Brick Company. Anthracite and bituminous coal fields are within easy reach and iron and steel manufacture has been of long standing. Phoenix Steel and Phoenix Bridge Companies are both subsidiaries of the Barium Steel Corporation, with the latter now the third largest producer of structural steel in America, employing over 2,000 persons. National economic surveys consistently list the area as a rich market with a higher than average standard of living. Recent expansion includes the development of the vast King of Prussia industrial complex which includes such well known companies as General Electric, Pennsault Chemical Company, Atlas Powder Company, American Seating Company, Yale and Town Research Center, Philadelphia Gear Company, and Robert Fulter Controls Company.

During the last decade, Pennsylvania's population grew 7 per cent while this area increased 48 per cent according to census data. Industrial expansion accompanied by occupational shortages is due to follow this trend.

The Employment Picture. -- Nearly 2,800 employers are represented in the Norristown, Conshohocken, and Phoenixville labor market area. These employers account for an employment total of approximately 63,000. The labor market area, because of its great diversification in industry, usually has less unemployment than the state as a whole. However, because of diversification, expansion, and changes brought about by technology, a problem of unemployment exists especially for untrained or undertrained workers, the combined expansion of the King of Prussia, Whittain, Whitemarsh and Lower Providence areas, with emphasis on research and development underscores the need for highly skilled manpower.

Employment by industry in the Norristown, Conshohocken, and Phoenixville Labor Market area is led by the electrical machinery manufacturing industry with some 9,000 employees. This is followed by the primary metals industry which formerly occupied first place with approximately 6,500 employees. Third is the machinery manufacturing group with 4,000; followed by the rubber, stone, clay and glass industries with approximately 3,500 employees. The chemical industry, federal and state government, wholesale and retail trades, and the service and food industries are grouped with about

2,000 employees in each category. The textile, apparel, and paper industries accounts for an additional 1,500. At one time, the textile industry alone held second place with some 4,500 employees but has declined in importance rapidly over recent years. It is anticipated that upwards to 15,000 new employees will need to be added to the total employment over the next 5 years.

The greater Philadelphia labor market area lies contiguous to the area being studied. There is an increasing trend in unemployment. At the same time there is encouragement in the particular area of machinery manufacture, which in itself accounts for a relatively large employment outlet for machine tool operators, see Table 7. When comparing machinery manufacturing with the state and nation, a substantial increase can be seen in the Philadelphia area.

A February-March, 1963, Labor Market Letter from the Norristown, Conshohocken, Phoenixville area indicates employment in mid-March stood at 40,941 with an increasingly favorable outlook. However, the same report calls to attention that the Philadelphia labor market area, of which the Norristown, Conshohocken and Phoenixville area is a part, maintains substantial unemployment with a ratio of unemployment to the total labor force from 6.0 to 8.9 per cent.

Field Oriented Needs (1,560 hours). -- The machine tool operator skill, when compared to others, is generally considered of a high caliber. In other words, the machine tool operation is more than a mere machine operator. For this reason, it requires a higher degree of manipulative ability and related technical knowledge than the semi-skilled performance level. Consequently, training of a broad nature including mathematics, science, blueprint reading, and the like is essential. The selection of individuals who possess the aptitude and mental ability to achieve such a skill level as possible under the MDTA type program of 52 weeks duration provides for opportunities of a field-oriented nature.

Analysis of the required training indicated the need for 1,560 hours of intense training to produce machine tool operators of an employable caliber. This was the objective of the Phoenixville program.

How the Needs Were Determined. -- The Pennsylvania State Employment Service, Norristown Office, accepted the responsibility for determining the need for machine tool operators in the area. Through direct contact with employers there was determined a need for approximately 100 individuals possessing machine tool operator skills. Of this number, it was estimated 50 would be required for expansion and another 50 for replacement. Employment records indicated only 10 unemployed persons available and qualified for the 100 opportunities.

A series of meetings was held involving the PSES, Vocational Director of the Phoenixville Area High School, and Foreman from the

Philadelphia Gear Corporation, Wiedemann Machine Company, Daystrom, Inc., and Hale Fire Pump Company. As an outgrowth of these meetings, it was determined that the need for the establishment of an MDTA retraining program in machine tool operation was indeed very much possible. Application was subsequently made through proper channels and approval received to begin the program in September 1962.

The Program

The Phoenixville Area Schools displayed a long history of concern for vocational education as part of their high school offering. As early as 1923, a program of vocational education consisting of three shops was incorporated into the school program. The completion of a new high school in March of 1958 included outstanding vocational facilities. The curriculums of electricity, carpentry, machine shop, auto machanics, and drafting are presently being offered and graduating about 40 students each year. The cost of the machine shop facility alone is estimated at over $138,000. The adult education offerings of an occupational nature accounted for an enrollment of 112 during the year 1962-63.

It was not surprising, therefore, to have the school authorities led by the vocational director take the initiative in meeting the need for machine tool operators. In March 1962, the vocational director contacted the Norristown PSES Office to discuss with them how the school facilities could assist with the MDTA retraining effort. As a result, the machine tool operator program with its general objective of making men employable in the machine tool classification was undertaken. More specifically, the objectives of the program included:

1. To develop skills in the setup and operation of engine lathes, milling machines, grinders, shapers, drill presses, cut-off machines, turret lathes, and contour sawing machines.
2. To develop knowledge of metals.
3. To develop knowledge of mathematics required in the machine operator trade.
4. To develop the skills in blueprint reading necessary to perform as a machine tool operator.

Approval for the establishment of the course was granted and the training started on September 17, 1962. Classes met after school hours from 4:30 in the afternoon until 10:30 p.m., thirty hours a week for a period of 52 weeks. In this manner, the existing school facilities were used to the maximum and little or no expense of costly equipment incurred.

Both the selection and placement of trainees, which is discussed in some detail later in this report, fell the responsibility of the Pennsylvania State Employment Service.

Developing the Curriculum. -- With assistance from representatives of labor, management, the PSES, and school authorities, an analysis of the machine tool operator occupation was made and a curriculum developed. The curriculum agreed upon follows:

MACHINE TOOL OPERATOR, GENERAL COURSE

A. THEORY . . . . . 160 hours
   1. Orientation and safety practices
   2. Mathematics
   3. Blueprint reading (elementary)
   4. Metals
   5. Heat treating
   6. Fundamentals of time and motion study

B. MEASURING, LAYOUT TOOLS AND BENCH WORK. . . . . 120 hours
   1. Care and use

C. LATHE OPERATION. . . 400 hours
   1. Engine Lathe
   2. Turret Lathe

D. DRILL PRESS OPERATION. . 55 hours
   1. Safety
   2. Drill press parts identification and uses
   3. Care of the drill press
   4. Drill press operation

E. MILLING MACHINE OPERATION . . . . . 350 hours
1. Horizontal
2. Vertical

F. SHAPER OPERATION . . . . . 125 hours
1. Safety
2. Parts identification and uses
3. Shaper care
4. Shaper operation

G. SURFACE GRINDER OPERATION . . . . . 130 hours
1. Safety
2. Parts identification and uses
3. Care of surface grinder
4. Surface grinder operation

H. PEDESTAL GRINDER OPERATION . . . . . 30 hours
1. Safety
2. Parts identification and uses
3. Care of grinder
4. Grinder operation

I. POWER CUT-OFF MACHINE OPERATION . . . . . 20 hours
1. Safety
2. Types of power cut-off machines
3. Care of machine
4. Operation of cut-off machine

J. CONTOUR MACHINE OPERATION . . . . . 60 hours
1. Safety
2. Parts identification and uses
3. Care of contour machine
4. Operation of contour machine

K. HEAT TREATING . . . . . 60 hours
1. Safety
2. Introduction and inspection of hardened and annealed steels

Planning and Installing the Facilities. -- Classroom and shop facilities were readily available since the MDTA class was to be conducted after regular school hours. The facilities were relatively new, having been constructed in 1958, and the equipment up to date. Figure 9 shows the floor plan and arrangement of the equipment.

The total estimated value of equipment was in the neighborhood of $138,000; a substantial investment if the program had started from scratch. In addition, $2,375.51 worth of small tools and accessories were acquired out of MDTA funds to assist in the conduct of the program.

Teacher. -- Uniquely, the teacher selected for this position was a Phoenixville machine shop (in-school program) graduate with some 14 years experience in industry. This individual had long held a desire to teach in the public schools and was, at the time, preparing himself for such a position by taking extension courses at the University of Pennsylvania. At the time of his employment, he had accrued 10 semester hours of teacher credit.

It is felt by those who supervised the Phoenixville program that the following minimum requirements should be maintained in teacher selection. In addition, teacher education topics should be provided through formal teacher training courses to assure success.

MINIMUM TEACHER QUALIFICATIONS
Retraining Program (MDTA)

Formal Education	High School Graduate
Experience	6 years in the occupation
Teacher Preparation	A minimum of 10 clock hour course in teaching techniques
Certification	The basic certificate (emergency)
Personal Qualities	Ability to work with and handle adult groups

FIGURE 9

[1]Department of Public Instruction, Teaching Vocational Education Subjects, Harrisburg: Commonwealth of Pennsylvania, 1960.

Selection of Trainees. -- Trainees for the program were all selected by the Pennsylvania State Employment Service. A job description based on the wants of all employers was written by the PSES. Both the job order (description) and course description were used as criteria in selection of applicants. These minimum requirements were:

Male or female, age open
Willing to receive training
Preferably high school graduate with one year of algebra
Satisfactory scores on B-217 factors G, N S, and M.

Preference was given to the younger applicants because of their potential adaptability and the fact that they more easily met the mathematical (one year of algebra) requirement.

Selection was made only after all of the requirements were met and confirmed by an interview.

- Personal Characteristics

The personal characteristics of the trainees enrolled in the Phoenixville machine tool operator (general) program are interesting to note.

Sex -- all 12 were male
Age -- 7 were under 25 years of age with the oldest being 38. The median age of the group was 24 years.
Residence (local) -- 8 of them had either been life long residents or lived 20 years or longer in the community. The remaining 4 claimed 1 to 6 years permanent residence at their address.
Residence (state) -- 9 were Pennsylvanians from birth. The other 3 migrated from North Dakota, Virginia, and Florida.
Marital Status -- 8 were single and 4 married.
Social-economic Status -- 8 classified themselves as working, 2 mid-working, and 1 low-working.
Living Accommodations -- 7 lived with parents, 2 rented, 1 owned his own home, 1 had his home provided by a relative, and 1 lived in a trailer.
Relatives -- all had relatives living in the immediate vicinity. These were recorded as 30 in one case with a median of 9.

It might be said that this group comprises a relatively young group of trainees with 58 per cent of them being under 25 years of age. It can, also, be said that they are truly Pennsylvanians as 3 out of 4 were born in the state. In no way could they be classified transients as half of them had lived all their life at the same address. The fact that 8 of these trainees were single is somewhat indicative of the appeal of retraining of the longer type (52 weeks) to the individual who does not have too large a family responsibility. Moreover, it is evident that all had strong family ties within the community and that mobility, even after training, may constitute a problem. No stronger ties can be reflected then by the 7 trainees who still lived at home with parents even though they ranged from 21 to 33 years of age.

- Family Characteristics

It appears evident that the trainees do not come from excessively large households. Moreover, in half of the cases, there were a number of youngsters (16 years or under) represented in the household.

Household Members -- 5 trainees came from a household of 4 members, 1 from 5, and 1 from 7. This was a total of 46 members, or an average of 3.8 per household.

Youngsters in Household -- 6 came from households with no youngsters 16 years or under, 2 with 1, and 4 with 2.

Obviously, the often cited relationship between large families and unemployment is lacking in this group of trainees. The plight of these individuals is definitely not a cause of "cultural deprivation" which is frequently persistent among large families in a low income bracket.

- Socio-economic Origins

Origins of a social-economic nature of the trainees appears as follows:

Fathers Occupation -- fathers of the trainees throughout most of their lives were: operatives (4), craftsmen (3), construction laborer (1), non-farm laborer (1), farmer (1), salesman (1), and foreman (1).

Socio-economic Status -- classification indicates: 1-lower worker, 7-working, and 4-middle working origins of the trainees.

Obviously, trainee origin is generally from the working class. Better than a third had the benefit of contact with a father who was a craftsman.

- Employment Status of Family Members

During times of unemployment, especially if such a status befalls the head of the household, it is often necessary for other members of the family to seek employment.

Number of Family Members (over 14 years) Not Going to School -- A total of 24 individuals or on the average of 2 per trainee were 14 years or over and still at home and not going to school.

Family Members Employed -- 13 of the household family members were employed full time and an additional 2 on a part-time basis. This represents 63 per cent of those eligible for work being employed in some capacity or other.

It is apparent that members of the families of these trainees are making an effort to sustain themselves by working.

- Employment History

The employment history of the trainees appears as follows:

Number times employed -- two of the trainees (17%) had never been employed before; four or 33 per cent had been employed only once before; 3 or 25 per cent had been employed two to three times; while 3 or 25 per cent had been employed over three times.

Location of employment -- Nine or 90 per cent of the trainees had their previous employment experience within the local community; only one had been employed outside the state.

Type of previous employment - Twenty per cent of the trainees had their previous work experience as unskilled workers and seventy per cent as semi-skilled. Only ten per cent could be classified as having held skilled jobs.

Distance from home -- The median

distance of previous employment from home was 1-5 miles.

Wages earned -- Twenty per cent of the trainees report former wages being between $50 - $59 per week while eighty per cent earned over $60 per week.

- Previous Training

Some of the group had taken specialized training previously. The extent of which is deserving of reporting.

No. of Times Taken -- Half of the group (6) had received some previous specialized retraining. Five had taken it once and 1 had received it twice.

Helped Get Job -- 3 times out of the 6, it helped individuals get jobs. In the same 3 cases, it led to looking for a job in another city.

Length of Course -- In 3 cases the training was 52 weeks or longer.

Type of Training -- 2 training cases were of a mechanic nature, 1 apprentice, 1 nurses aide, 1 barber, and 1 the armed forces.

Results -- 3 got new jobs because of it; with 2 it helped in the present job, and 1 received a promotion. In 3 cases, it led to another city. 1 got better pay and 3 learned new skills.

Retraining obviously was not new to this group since 50 per cent of them had previously availed themselves of such opportunities. Apparently, it helped all 6 individuals in some way or another. It, also, assisted in mobility as 3 of the 6 did look for work in other cities after its completion.

- Educational Background and Values

Ability to master the training being offered is to a large extent reflected in one's educational background. In a like manner, values held of formal education are important and are reported in the following:

Formal Education -- All of the trainees (12) either completed high school or the GED equivalency.

Educational Achievement -- 8 of the 12 indicated they had done about as well as most other students while in school. The group as a whole had a 98.9 IQ on the California Short Form Test of Mental Maturity and a grade placement of 10.9.

Favorite Subjects -- social subjects, manual (industrial education), and the physical sciences were reported as favorite subjects. Best grades were claimed in these categories.

Higher Education -- only 1 trainee went to college although he did not graduate. 4 thought about going to college and 8 did not. The most prevalent reason for not going to college was given as "financial".

More Education -- 11 out of the 12 would have gotten more education if they had it to do over again. 7 would choose higher education and 4 either trade or business education.

Educational Values -- The value of education was overwhelmingly expressed by the group's response that "both boys and girls should complete at least 12 grades of school," "it is not right to quit high school," and "most youth in their family will complete high school and some college."

Cultural Values -- 9 trainees read regularly either a local or out-of-town newspaper. Three do not read any newspaper regularly. Five read mass circulation sliks and pictorials such as Life, Look, Readers Digest, etc. Interest in TV was shown by 10 who watched television regularly; 2 did not. Five knew

their congressman by name; 7 didn't. All 12 knew who was the governor of the state. Eleven out of the 12 knew the name of the largest employer.

Societal Values -- 9 belonged to, or held membership in a church; 3 were members of a volunteer fire department; 4 belonged to some sports group organization; 1 to a lodge; 3 were either active or former members of a union, and none belonged to a PTA or political organization. Cumulatively, 5 were active in two organizations; 3 belonged to 3, and 1 to 4 organizations. Evidence indicates but a slight curtailment of membership in belonging to organizations during the past 4 to 5 years.

It appears rather clear from the aforementioned description that the trainees of the machine tool operator program (MDTA) represent an educationally alert group. They know the value of education and are sensitive to the need for an adequate educational base. On the other hand, the cultural and societal values of the group leaves something to be desired. Their mediocrity in taking part in community activities and in their own self improvement through reading, may reflect their state of depression or may even be a contributing factor to their unemployment predicament. Further study on this entire category would be most interesting.

- Aspirations and Occupational Mobility

The trainees reported the following aspirations and attitude toward mobility:

Aspirations for Sons and Daughters -- 6 of the group held aspirations for their sons and daughters for an occupation or profession in the middle-working or upper-working category.

Self Aspirations -- 5 out of 7 admitted secret aspirations to do some other kind of work than they either had been doing or for which they were being trained. Only 3, however, felt they would some day realize this ambition.

Mobility versus Retraining -- the group was split down the middle (6 to 6) on the question whether or not it is more difficult to move to a new community where there is employment or to be retrained for a new occupation and remain where located.

Returning to Old Occupation -- Three-fourths of the group indicated there was literally no chance of their ever returning to their old job. This is in spite of their good health and lack of physical handicaps.

Mobility of Residence -- 11 out of the 12 indicated they expected to be living in their same community 5 years from now. The one descendant said opportunities were limited and he would prefer to move.

Encouraged Mobility -- If given encouragement and a free choice to move anywhere in the U.S., 9 would remain and 3 would move. Of the 3; 2 would seek some other state and 1 would remain in Pennsylvania.

Cost of Mobility -- $4,000 to $4,999 was reported as the median family income which would be considered necessary to be as well off financially in another community. However, to actually "move," the median income would have to be in the $6,000 to $6,999 bracket.

Mobility Problems -- Reasons for not wanting to move were: "hate to leave family," "opportunities exist here," "this is a good place to raise kids."

Mobility of Youth and Neighbors -- 7 out of 12 indicated they would want their sons to remain in the

community. 9 were in favor of their neighbors remaining.

Change of Occupation -- 10 out of 12 thought it desirable to take any kind of work if unemployed for 6 months. Nine approved of wives working if husbands were out of work.

If there is any relationship between aspirations and necessary mobility to achieve such ambitions, it is not evident from the above description. Indeed, it might be said that the trainees are not mobile conscious. They are satisfied not only for themselves but for their children that opportunities within their immediate community are about as good as any place in the state or country.

EVALUATION

Study of the Phoenixville machine tool operator (general) under The Manpower Development and Training Act necessitated evaluation in some depth. As typical as the Phoenixville case may be, it can not be assumed that generalizations can be drawn from it. This is to say, this single evaluation can not assure other MDTA programs being as effective as reported for the Phoenixville case.

General

The MDTA effort of the Phoenixville school, The Pennsylvania State Employment Service, industry and lay leaders can be looked upon with pride. It is obvious that the diversified nature of the labor market area will require a continuing upward spiral of skilled workers. Retraining then, becomes a major factor in maintaining an effective labor force.

Trainee Selection

The Pennsylvania State Employment Service (Norristown Office) apparently carried out its responsibility for the selection of retrainees in a most sincere and conscientious manner. All candidates were given two interviews, the first consisted of general orientation and testing, and the second, a depth interview to assure sincerity on the part of the candidate to complete the retraining program.

Employers indicated for the most part, that the trainee selection standards were about right. This is further evident in their satisfaction with those they hired. Only in a single case, had a trainee been dismissed because the employer felt he was too slow in grasping the essential on-the-job knowledge. Moreover, all employers interviewed said they hired the trainees because they felt they had been well screened prior to their entrance into the training.

Overall Quality

The Pendered (1957) "upgrading instruction" form was used to evaluate the overall quality of the instructional program. This instrument provided a qualitative rating on factors of physical conditions, instructional program, methods, management and housekeeping and the teacher. The 77 item ratings were scored independently by two individuals well versed in educational practices required for maximum instructional effectiveness. The per cent quality on the four factors as well as the overall quality follows:

Factor	Per Cent Quality
Physical Conditions	84.4
Instructional Program	69.1
Methods, Management and Housekeeping	73.2
The Teacher	69.0
Over-all Quality	69.8

- The physical facilities in which the Phoenixville machine tool operator program was conducted were rated well above average at 84.4 per cent. This was undoubtedly because the program was held in a relatively new high school which had a well equipped vocational machine shop. By scheduling the retraining program after school hours, the availability of such a desirable instructional setting was assured. No major weaknesses of any kind were found in the physical facilities. Minor deficiencies were observed in connection with: the absence of non-skid floor coverings in some machine areas, the need for an expanded library of reference materials, and greater accessibility to audio visual aids.

- The instructional program was rated above average at 69.1 per cent. Items receiving high ratings were: course aims or objectives, activities, activities in shop suited needs, course of study, group projects (jobs) planned to develop cooperative attitudes, and project interest. Items where need for improvement was indicated were: instructional techniques, i.e., development of safe working practices, study of typical working conditions, use of reference books, trade literature, and evaluation of trainee programs.

- Methods, management, and housekeeping was rated at 73.2 per cent. This above average rating is indicative of an orderly and clean instructional facility. Methods of instruction were also rated high. Progress charts were used, records were in order and class control was good. Pupil motivation, although not of an eagerness degree was noted at a constant level of interest.

- The teacher was rated on 19 separate items and scored above average (69 per cent). It was interesting to note that this individual was seriously considering teaching as his life career. Evident strengths were in his poise, personal appearance, voice, manner, interest, and command of the subject (skills) taught. The fact that this individual desired to make teaching his life work and was making preparation in that direction (by taking teacher education courses) was evident.

- Over-all quality of the Phoenixville machine tool operator (general) program was rated at 69.8 per cent. This was the highest of the three retraining cases studied. Employers signified the trainees were "good" or "about right" in their quality which spoke highly of the program. They hoped to see the program continued and there was no general consensus as to specifics for its improvement. Items mentioned during interviews with employers varied from, "more related mathematics," "more skill at grinding tools and drills," and "reading of instruments weak." One employer felt the equipment used in the instructional process should have been of a larger, more industrial variety.

Employment and Placement

What happened to the trainees after completion of the course? More than anything else this provided the real criterion measure of effectiveness. Initial employment was reported at 100 per cent. In other words, everyone who completed the course got a job. It took an average of 9.9 days for the graduates of the program to find a job but all got one. This is an outstanding achievement and speaks highly of the program and the placement efforts of the Pennsylvania State Employment Service.

Through follow-up interviews some 90 days after initial employment, it was found that 82 per cent were still working in the occupation for which they were trained. Those not employed were either looking for work or doing odd jobs while waiting for employment along lines for which they were trained.

Earnings of the trainees at the end of the first three month period indicate a mean earning of $95.73 per week and an hourly rate of $2.11. It should be noted that this group worked on the average of 44 hours per week which represents four hours over-time pay when compared to a normal 40 hour week.

Satisfaction with the course and employment opportunities was registered when 92 per cent of the trainees indicated they would enroll in the course again if they had to make the choice over. This represents an outstanding endorsement of the 52 week endeavor and major investment in terms of time and energy on the part of the trainees.

A Final Word

The MDTA retraining course, as conducted by the Phoenixville Area School District, represented a major effort to provide broad base training far beyond that attempted by either Pennsylvania's 2508.3 or the ARA approach. This meant organizing curriculum, providing facilities, and securing teaching personnel for a total of 52 weeks (1,560 hours). Utilization of regular school facilities (the machine shop) after hours appeared not to impose any particular hardship on either students, teachers or facilities. In fact, the longer length program, once in operation appeared to take considerable pressure off those responsible for its administration. This is to say, the necessary paper work and "red tape" was no more involved to operate a long program than one of shorter length. The problem of keeping the class together until successful completion of the entire course was compounded by the fact that employers were anxious to hire some of the class and had to be pleaded with to "leave their hands off" until the course ended. Admittedly also, attendance on certain "spring like" days and reporting for class in the late afternoon caused some concern. The fine student selection and qualified teacher assisted measurably in assuring success of the program.

RECOMMENDATIONS

5. EMPLOYMENT AND SOCIETAL EFFECTS OF RETRAINING PROGRAMS

THE PROBLEM

The problem of retraining the unemployed has many facets. One is the degree of training intensity or specificity that should be pursued. This is to say, how narrow or how broad should retraining programs be conceived? Should they include but a few, even though complex manipulative abilities of a repetitive nature, or should the programs be broad in nature so to provide for transfer of knowledge and skill? Moreover, questions can be raised as to the efficiency of retraining in a narrow or specific sense (job oriented) when measured over a longitudinal period as compared to the value of broad (field oriented) training.

Pennsylvania has been a pioneer in providing retraining programs for the unemployed. As early as 1952, the State Legislature passed the Pennsylvania Retraining Act (2508.3). Subsequent Federal legislation (the Area Redevelopment Act and the Manpower Development and Training Act) was almost immediately implemented into the retraining structure of the State. Each of these pieces of legislation are geared to serve a different purpose, to provide a different type of retraining, and expected to produce different results. It was, therefore, opportune to view such retraining programs, one of each type in Pennsylvania, through a detailed case study method. To this end, the problem became one of delving into three different, yet similar, programs which were providing retraining for the unemployed.

FOCUS OF THE STUDY

This, then, became a descriptive study delineating the cases in terms of when, where, how and what. Answers to the following questions supply an indication as to what actually happened when the three retraining approaches were applied.

Answers to the following six questions were sought to assist in drawing this picture.

1. What were the initial or job entrance opportunities for individuals trained broadly (field oriented) as compared to individuals trained narrowly (job oriented)?
2. To what type of persons did the differently oriented types of retraining appeal? What were the differences in personal background, formal education, etc.?
3. What were the long-range opportunities for individuals who had received these kinds of training?
4. What were the differences in efficiency in terms of time, instructional cost, facilities needed, and operation of the types of training?
5. How do employers evaluate the end results of the types of training?
6. Was one type (job versus field) more conducive to employee mobility and lend itself more to acceptance of relocation?

THE PROCEDURE

The limitations imposed on this study necessitated using the case method which required (1) the selection of three cases: one job oriented (2508.3 program), the other field oriented (MDTA program), and an intermediate case (ARA program); (2) evaluation of the respective programs in terms of instructional content, teaching techniques, training facilities, ability of trainees to profit from instruction, socio-economic status of trainees, etc.; (3) ascertaining initial job placement as a result of the training; and (4) follow-up of the trainees three months to a year after completion of the retraining program.

THE FINDINGS

The findings which follow represent a detailed study of each case in relation to the six questions that were delineated. Moreover, it is emphasized that the findings reported here apply only to the cases studied and in no way can they be generalized for other programs. This is to say, other programs may prove as effective, less effective, or even more effective than those studied. There are, however, noticeable differences emerging as end results among the programs which are reported here.

Program Differences

Differences in conducting the three programs studied were mainly in length, curriculum, cost of providing instruction, and the equipment (hardware required). Table 8 shows these differences. Although there are differences among the programs, they should not be miscontrued to represent generalizations of what has been termed narrow (job oriented), intermediate, and broad (field oriented). These data represent only the programs studied.

The Trainees

As stated previously, the Pennsylvania State Employment Service had the responsibility in all three cases of screening and selecting the trainees for each program. Naturally, the various program levels required different trainee prerequisites. Differences among the groups became obvious when they were studied both during and after their training.

Probably the most noticeable difference among the groups was in mental ability (Table 9). It can be seen that intelligence and grade placement account for major differences between the 2508.3 and the MDTA groups. The ARA group falls somewhere between these two extremes.

Table 8
PROGRAMS COMPARED BY TIME, COST PER STUDENT, VALUE OF EQUIPMENT[a]

Program	Curriculum	Length of Program-hrs.	Cost of Student-hr.	Value of Equipment
2508.3	Narrow (Job)	90	$0.33	$ 10,000
ARA	Intermediate	640	$0.61	$ 60,000
MDTA	Broad (Field)	1,560	$0.45	$138,000

[c]Interview schedule data.

status (self perceived) was measured, it was found to fall at a "worker" level for all three groups of trainees.

Formal education values as expressed through an interview show some distinguishing differences (see Table 11). Data indicate only 9.1 per cent of the 2508.3 group completed high school whereas 57.1 per cent of ARA, and 91.7 per cent of MDTA claimed to have finished high school. Other apparent differences were 40 per cent of the MDTA group did not like any particular subject whereas the individuals comprising the other groups held a greater number of subjects as "favored." It is also interesting to note that those with less formal education tended to emphasize the need for boys completing high school and college more than those who had acquired more formal education. On the other hand, those with less formal education felt girls do not need as much formal education as boys.

The 2508.3 group (job oriented) to a large extent came from lower working, and labor family backgrounds (Table 12). Both the ARA (intermediate oriented) and MDTA (field oriented) groups came from predominantly craftsmen or operative families of a working or middle-working background. The size of the family, or number in the household, as a family origin of the trainees appears moderate and would not seem excessively large.

Table 13 shows that only 25 per cent of the job oriented (2508.3) trainees had ever been unemployed prior to the training period; compared with this, 78 per cent of the ARA trainees had been unemployed. It appears from this that the 2508.3 program was in a major sense providing almost initial training opportunities of a job-type for the trainees. In other words, this could well have been the first opportunity ever offered to them to learn salable and marketable occupational skills.

Moreover, Table 13 presents a picture of relatively little job mobility, working at an unskilled or semi-skilled level and for

comparatively low wages. Surprisingly enough, the individuals studied had not jumped from one job to another, but were found to have been fairly stable in the number of jobs they had held. Then, too, their jobs were mainly located in the immediate vicinity, usually within a 5 mile radius. Low level of skill is reflected throughout, since no one in either the 2508.3 or ARA groups could claim having held a skilled position. However, in contrast the MDTA group seemed to possess a somewhat higher level of skill and were paid considerably higher wages.

Trainee and Employer Evaluation

Trainee evaluation of the programs appears in Table 14. In general, it can be said that the trainees were satisfied with the instruction they received including teacher, equipment, length of course, and skills covered. In effect, this speaks highly of those who had the responsibility for the establishment and administration of these courses. A weak point in the ARA program apparently was that the course was felt to be too short while a third of the MDTA group

[a]Interview schedule data

felt the course was too long. Both groups apparently felt that the equipment was not satisfactory for the best instruction. These two ratings were reflected in the ARA group feeling that the coverage of skills taught was somewhat limited. Moreover, only 57 per cent of the ARA trainees admitted that "if they had it to do over again" they would take the same course. Of the 43 per cent who preferred another course, their choices were in the areas of welding, auto mechanics, cooking, accounting, and electronics. In contrast, 92 per cent of the MDTA group would make the same choice again.

The 2508.3 (job oriented) group appeared more satisfied with their course: 95 per cent of them would take the course over again if they had the same opportunity; 50 per cent felt the length of the course was about right; 90 per cent felt they learned the skills well; and 95 per cent were of the opinion that there was good coverage of skills taught. However, only 78 per cent felt the equipment was satisfactory.

Employer evaluation based on 18 rating factors is shown in Table 15. Ratings were

Table 15

EMPLOYER RATINGS[a]

[a] Employer Rating Scale, The Pennsylvania State University, Department of Industrial Education, 1962.

made approximately three months after training and represent a mean of employers' scores. It can be seen that employers of the ARA trainees (intermediate oriented) scored their newly acquired employees higher, on the average, then employers of the 2508.3 (job oriented) trainees. Interviews with the employers indicate, in general, both groups were satisfied with the training programs and felt them to be effective. One comment made several times in connection with the job oriented (power sewing machine operator program) was that the equipment could stand updating. A more serious comment given relative to the intermediate program (sheet metal machine operator) concerned the attitudes of the trainees. Employers made clear that basic skills, although essential to secure employment in the first place, were not in themselves enough to hold a job. In other words, an employee must also be able to get along with his fellow workers if he is to hold a job.

Table 15 shows a consistently lower employer rating of MDTA trainees. Interviews with the employers revealed that they applied higher standards than did the 2508.3 and ARA employers. They tended to compare the trainee's performance with their regular workmen -- men with considerable experience. Although the trainees had more skill to offer, employers also expected more.

Initial Job Opportunities

Assuming the three approaches being used in Pennsylvania for the retraining of unemployed or underemployed are intended to meet a somewhat different need, this dissimilarity should emerge and be apparent in a number of respects. One of the first differences that was looked at was in the types of training or courses that are being offered. Table 16 indicates to some degree the different kinds of

Table 16
TYPES OF JOBS FOR WHICH TRAINING IS BEING OFFERED[a]

jobs for which training is being given throughout the state. It is obvious that the narrower, less skilled needs are in the main being met by the 2508.3 programs; and the broader, more highly skilled level occupations through MDTA programs. Undoubtedly, there exists some overlap at both the low and high level occupations by the ARA offerings.

A more significant measure of job opportunities as well as program evaluation is reflected through actual job placement after completion of the program. Here, investigation was directed to determine what happened to the trainees once the course was completed. Did those who completed the training get jobs or didn't they? In the case of 2508.3 and ARA, it was found that 96 per cent of the job oriented, 2508.3 group, were employed within a little over a week after completing training, and only 59 per cent of the ARA trainees had their first job three weeks after training (see Table 17). Unfortunately, training needs must be based on intent and ability of employers to hire the trainees after the course has been completed; production conditions may change from the time the program starts until its completion. This was the case with the second section of the ARA Sheet Metal Machine Operator program, and circumstances were such that job opportunities (at least at the time of the follow-up interviews) were not available. Moreover, the instruction apparently was not broad enough to provide adequate transfer of training to assure initial or temporary employment in some related occupation.

Trainees initial employment experiences account for some interesting differences. When attempting to relate the training course with job results, it can be seen (Table 18) that the ARA group did not fare very well. Still more discouraging and only a short three months later, it appears that employment in the area for which training had been given to both groups declined sharply. It is, however, encouraging to see that a substantial percentage of the trainees admitted receiving help from the Pennsylvania State Employment Service in securing their positions. It is also encouraging to see that of the 100 per cent placement of MDTA trainees 83 per cent were still working in the occupation for which they were trained.

Long Range Opportunities

Probably the most difficult evaluation to make of each retraining program was its long range effectiveness. The length of time (approximately three months in each case) provided for a longitudinal study of this aspect is admittedly inadequate, and it is planned to follow-up trainees through their social security number for some few years. Therefore, this report reflects but an emerging picture of what might be expected to happen. Table 19 implies that after three months, those who received intermediate training (ARA) were being paid a somewhat higher hourly wage than those who received the job training. This is to say, there was a difference of 37¢ per hour and $14.87

MDTA	12	44	$95.73	$2.11

[a]Data taken from interview schedule data.

per week in mean wages earned between the groups. Further study on this point will be needed to ascertain whether or not this difference becomes greater as the time of employment is extended. In other words, is the "worth" of the more skilled individual compensated for in increasing wages? Certainly the difference is evident in the field trained case (MDTA). However, it should be noted that the group averaged four hours overtime pay.

It is interesting to note that those who received the higher skilled training appear more satisfied in their jobs, as indicated by the Brayfield and Rothe, Index of Job Satisfaction. Table 20 shows a significant mean difference between the 2508.3 and ARA scores. In other words, those who received the broader training and the higher paying jobs tend to be more self-satisfied than those who were more narrowly trained.

The MDTA score might have been higher had not two trainees been placed in inspection rather than production jobs. They felt they were not trained for inspection although the employer felt that their training was a necessary prerequisite.

Employment experiences, after training, (Table 21) provided some interesting differences. Three months after training 92 per cent of the field oriented (MDTA) and 80 per cent of the job oriented (2508.3) were still employed, while 50 per cent of the ARA (intermediate oriented) group were still employed. Of those employed, 86 per cent of the job oriented and 82 per cent of the MDTA trainees were still working in the occupation for which they were trained compared with 71 per cent of the intermediate oriented ARA group.

t (1) and (3) Not Significant

An attempt was made to ascertain any significant change in social status of the trainees as indicated by administering a pre-and post-test of the Sims SCI Occupational Rating Scale. It was felt that the training programs and initial job success might provide a stimulus for improving one's self-perceived social status. Possibly, unemployed individuals would perceive themselves as being rather low on a social continuum and, after becoming employed, their self-image might be raised. This was not the case and only a slight, if indeed any, change was noted between pre-and post-test scores made on the instrument.

Employee Mobility

At this time, only a slight feeling of each group of trainees on the question of mobility can be determined. Table 22 shows a preponderance, in each case, of trainees that expect to be living in the immediate area 5 years from now. The greatest portion of those who do not (22.7%) was found in the 2508.3 (job oriented) group from the Wilkes-Barre power sewing machine program. Even when given a free choice to move anywhere, there was still no large scale desire to move away from their local community. Here

[a]Data taken from interview schedules

again, the power sewing machine group (50%) were more prone to move than those in the other two cases. The payment of moving expenses did not appreciably affect the desire to move.

It is interesting to note, when trainees were asked to think in terms of young people and their chances for employment in the community, both the 2508.3 (Wilkes-Barre) and ARA (Pottsville) groups admitted it would be better if they moved to other communities where occupational opportunities may be greater. A similar expression was given relative to the question, "If you had a son finishing high school, would you want him to stay around here?"

It was noted that there were some mixed feelings as to which was more difficult: to move away to find employment of the kind already known, or to learn a new skill and remain in the community.

DISCUSSION

As emphasized in the opening section of this report, the research made use of the case study method. This is to say, generalizations cannot be made, and the findings reported herein only apply to the cases studied. Nevertheless, some pertinent information has been gathered in terms of what is actually happening in retraining situations where three different pieces of legislation are being applied.

Trainees

Undoubtedly, one of the most difficult problems faced when constituting a retraining program is in the selection of trainees. Ferreting out individuals who can profit from the instruction or placing square pegs in square holes, so to speak, is of paramount importance. The fact that differences of a noticeable degree were found in the mental and mechanical aptitude among the groups is an indication that those responsible for selection, The Pennsylvania State Employment Service, were taking their task seriously. Moreover, the more highly skilled training received potentially higher individuals: those who had a better chance to achieve at this level. This fact, as verified by the California Short-Form Test of Mental Maturity, Figure 10, shows the appreciable differences in intelligence and grade placement among the groups.

It is obvious that the selection process cannot be 100 per cent effective, and some "misfits" are bound to be accepted for the programs. Therefore, it would seem that even greater efforts, more testing, and counselling should be exerted at the point of selection. Realistically, the end product of a satisfactorily

California Short Form Test of Mental Maturity

trained worker is in direct proportion to the initial trainee selection, and much in the way of efficiency and success lies in this initial step.

The Programs

There are evident program differences wherein it appears that an attempt made to set the level of training in conformity with the desired end objectives. In other words, the 2508.3 program (90 hours) is striving to meet the more specific job needs; the ARA (640 hours) the semi-skilled and broader needs; and the MDTA (1560 hours) broadest or most highly skilled needs. Planning and organization of each program followed a sound and well-thought-out procedure, making maximum use of resource persons and community endeavor. Under the limitations imposed upon those who were responsible for establishing each program, the results were most commendable.

Evidence appears that each of the programs studied were provided satisfactory instruction. Both employers and trainees generally supported this statement. Nevertheless, and as effective as the interviews indicate training to be, some questions as to the overall quality of instruction can be raised. To the educator, who is continually striving for maximum quality, many shortcomings were apparent in each of the three programs studied. However, it should be remembered that these programs had been identified as being "outstanding examples" in each instance. To assist in uniformally evaluating their quality, a modified version of the Pendered Scale (1959) of program evaluation was administered independently by three individuals for each case. The results of this instrument, Table 23, suggests much to be desired in the overall quality of each case studied. Reasons for some of the low scores became apparent when it is realized the handicaps under which the instruction was being carried on. For example, the physical setting of the ARA program was conducted in a building of N.Y.A. (National Youth Administration) vintage compared with the modern school facility in which the MDTA program was being carried out. Other examples could be cited, but the fact remains the overall quality of programs could

Table 23

[a]Norman C. Pendered, Upgrading The Industrial Arts Program. State College: Pa., College Science Publishers, 1959.

and should be improved if maximum effectiveness of retraining is to be realized.

Field Versus Job Oriented Retraining

Little, if indeed any, evidence has been accumulated to support the hypothesis that "programs for retraining unemployed workers will be more effective in terms of advancement opportunities and continued employment success if broadly oriented to industrial needs rather than specifically job oriented. Conversely, programs for retraining unemployed workers will be more effective for initial employment success if specifically job oriented rather than broadly oriented to industrial needs." There are indications from the two cases where follow-up has been carried out (job and intermediate oriented) that initial employment opportunities for the power sewing machine operator trainees were abundant. And if a trainee wanted a job, it was available. The same was not evident for the sheet metal machine operator group. After three weeks, 41 per cent of these individuals were still looking for work. This is in spite of the fact that the training was moderately broad to the extent that there could be some transfer of skill to other mechanical occupations.

Follow-up of the trainees indicated that those who had received the broader (ARA) training, and did find employment, were more satisfied with their jobs and earned a higher weekly wage than the job oriented (2508.3) trainees. Follow-up of the field oriented (MDTA) group further indicate some relationship between the breadth of training and job satisfaction. However, perhaps the most significant fact is the high positive relationship between length of training and earning power. The MDTA group earned 58 per cent more per hour than 2508.3 trainees.

RECOMMENDATIONS

Keeping in mind that the three cases studied cannot be used as empirical evidence, but as indicators of what might be expected if a larger sample of programs had been studied, the following recommendations are made.

- Some form of job trials should be incorporated as part of the selection process to assist trainees in making a valid occupational choice.

If it is agreed that the selection of trainees constitutes a major problem to retraining, then every possible effort should be made to assure success at this initial point. What may be construed in the mind of a prospective trainee to be a desirable and interesting job from its description may be far different from what exists under actual working conditions. This is to say, the operation of a power sewing machine, for example, even during the training period may be far different than actually operating the same machine in a garment factory. Some way must be found to acquaint the prospective trainee with "what is to come" after completing the course. One way to accomplish this may be to incorporate actual plant visitations, guided tours, etc., as a part of the selection process. Furthermore, an actual acquaintanceship might be carried on for a few hours to even a week (depending on the length of the retraining being considered) where the prospective applicant received an overview of the occupation and the necessary requirements (personal and physical) involved.

- Permanent facilities for training the unemployed should be established throughout the state.

It should be apparent to those who are engaged in the administration and supervision of retraining the unemployed that much remains to be done to "get geared up" to do the job. In fact it remains questionable, if under present circumstances (added local work load, crowded school conditions, teacher shortages, and limited local resources) the present "crash approach" to the retraining problem can be effective. Certainly, all indications point toward retraining as being a continual social problem for some years to come; in fact, almost a way of life in some labor market areas or even in whole states. Therefore, the best

long range planning should be considered. Duplication of effort and the haphazard development of retraining programs are an inherent danger of the present plan which could well be avoided if forceful and farsighted leadership is carried out at the state level. What seems to be needed is the establishment of permanent-type schools based on a master plan to serve the entire state for many years.

- Retraining programs, regardless of their type, should emphasize proper work attitudes as equally important as occupational skills.

Initial job entrance skill training is not enough. Although several skills may assist in securing initial employment, once the job is obtained worker attitudes play an increasingly important role. For this reason, retraining programs should make a special and concerted effort to incorporate proper attitudinal development throughout the course. Just how this might be accomplished is most difficult, but without its consideration all of the skilled training in the world may be of no value. Certainly, talks by those skilled in human relations and personnel problems, the use of mass media such as movies, and the like, should not be overlooked in attempting to instill proper attitudes.

- There should continue to be provisions for retraining programs of a job, intermediate, and field oriented type, to meet the needs of all unemployed individuals.

The occupational potential of individuals varies tremendously. Opportunities should be available for retraining at any level, and in far more occupations than are presently being conducted. A plan that meets the aspirations of all individuals to acquire knowledge and skills throughout a life span is certainly worthy of endeavor, and one which would recognize the State's most valuable resource; its people.

This report is concluded by asking the question, "Who among local, state, or national leadership feels enough effort is being put forth in the direction of developing our human resources to their maximum?" If maximum effort is not made at the local, state, and national levels, we must be prepared to accept an increasingly larger percentage of unemployment-people who are unable to meet the vigorous needs of today's industry. The solution, at least in part, lies in providing vocational education of the best possible kind at every stage of life's span.

Principles for Arranging, Mounting, and Storing Hand Tools in Industrial Arts Shops.

Pennsylvania State Univ., University Park. Dept. of Industrial Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 1Jun63 11p.

*HAND TOOLS; *INDUSTRIAL EDUCATION; *SCHOOL SHOPS; *EQUIPMENT STORAGE

The primary objective of this study was to derive principles for arranging, mounting, and storing hand tools in industrial arts shops. The research was based on the assumption that general principles for tool storage could be tentatively established by the unanimity of opinion of a representative group of qualified personnel. Criteria consisting of 35 statements were derived from relevant literature and submitted to 51 secondary teachers, city supervisors, local directors, state supervisors, and teacher educators. Response data for each criterion were grouped into two categories: (1) the number of jurors accepting the statement or criterion as a principle, and (2) a combination of jurors not accepting the criterion, jurors accepting the criterion if reworded, and jurors not responding to the criterion. The degree of acceptance for each criterion was assigned a percentage weight, and the data were tested for reliability by computing the standard error of the percentage. The 32 derived principles included: (1) A tool panel should be of such height and depth and so located that the average student will be able to remove and replace any tool, (2) Each tool should have a definite place, (3) Design should facilitate tool accountability, and (4) Facilities for locking the panel should be made. June 1, 1963

I. Purpose of the study

The primary objective of this study was to derive principles for arranging, mounting, and storing hand tools used in industrial arts shops.

II. Need and justification for the study

For many years it has seemed to the investigator that tool panels, tool mountings, and tool arrangements were neglected aspects of industrial arts shops. Examination of the tool panel in the typical industrial arts shop will reveal that, in most cases, major improvements could be made. In too many shops the hand tools seem to be hung up haphazardly or arranged without much evidence of careful planning - even from the standpoint of student safety. Often there is no visible system of tool accountability.

In all probability few will deny that a real need exists for help and guidance in planning tool handling systems for industrial arts shops. This need was corroborated informally by the investigator in interviews with some of the Area Coordinators of Industrial Education, with certain teacher educators, and with many industrial arts teachers at the secondary level. Unfortunately, little if any, emphasis has been placed on designing tool panels in teacher training curriculums. One reason for this may lie in the fact that almost no published data, founded on research, is available for inclusion in shop layout courses. It can be safely stated that up to this time there has been little or no scientific study of this particular problem in industrial arts education. Although a considerable amount of opinionated information is available on tool panels, there is no known set of principles for guidance in designing and constructing tool panels. In this respect, the purpose of this study is unique.

III. Those to whom results of this study may be useful

The findings of this study should be of special value to teachers, supervisors, and administrators of industrial arts programs at both the secondary and the college levels. The results should also be useful and of interest to personnel in other educational programs where hand tools are used, such as, vocational-industrial, vocational-agriculture, art education, and special education. In addition to facilitating the daily management of such shops and laboratories, the findings of this study should be extremely helpful in planning and organizing tool storage facilities in both new and old shops.

IV. Limitations of the study

This investigation was limited to the tool panel/s or tool room/s containing the common hand tools used in an industrial arts shop. Not included in this study were the following: (1) stationary or mobile tool racks for machine tools or accessories, (2) storage facilities for cleaning equipment, supplies, or materials, (3) drafting-room tools or equipment, (4) vocational shops (vocational-industrial or vocational-agriculture), art education or special education laboratories.

V. Assumptions

This research was based on the assumption that general principles

for mounting hand tools in industrial arts shops can be tentatively established by the unaminity of opinion of a representative group of qualified personnel. This premise is supported by Friese who states:

> We say that we have established a principle when we have tried out procedures that we believe to be sound and have found that they appear to achieve the ends for which they were set up. If there is evidence that they do the thing that was intended, we accept them as part of general practice awaiting the time when experimental evidence or long-established usage shows that they are sound and that they are truly principles or that they are not.[1]

Thus, it was assumed in this study that if, by statistical means, it can be shown that when a selected group of well-qualified judges accepts a particular criterion concerning a tool panel as sound and holding true in all situations, that criterion can then be tentatively accepted as a principle until experimental research or common usage supports or refutes its claim to be a true principle.

VI. Procedure

A. Preliminary criteria for arranging, mounting, and storing hand tools in industrial arts shops were formulated by the investigator after careful consideration of the following:

1. Review of the periodical literature in the field from 1915 to the present.

2. Study of textbooks and manufacturers' catalogs.

3. Survey of lists of master's and doctor's theses.

4. Study of state bulletins and brochures.

5. Perusal of other published and unpublished materials available to the investigator.

B. The criteria were subjected to critical evaluation, revision, and restatement before attaining their final form. Duplication and overlapping were either eliminated or minimized by consolidation or rewording. Improvements in content, coverage, and form were accomplished by means of informal discussion of the criteria with selected industrial arts teachers including teacher educators, secondary-school personnel, and graduate students.

C. The final draft of the criteria consisted of thirty-five statements which were readied for presentation to a selected national jury of experts for the purpose of validating their claim to be principles for arranging, mounting, and storing hand tools in industrial arts shops. Items numbered 100 and 101 (see page 6) were not believed to be principles-in-the-making, but were purposely included in the final draft as a check on the jury to see

---

[1] John A. Friese, Course Making in Industrial Education, (Peoria: Charles F. Bennett Company, Inc., 1958) pp. 55-56.

if they were just blindly agreeing with the investigator's proposals.[2]

D.. The jury of experts were selected on the basis of demonstrated ability or experience on the design and construction of tool panels or tool holders. Thirty-seven of the fifty-one persons comprising this jury were chosen because of their published writings on this topic within the last five years as noted in the periodical literature of the field. In addition, the names of nine other teacher educators were included on the jury because of their national reputation as teachers of professional courses in industrial arts. And finally, eight secondary-level teachers were invited to participate in the study because of their accomplishments in designing school-shop tool panels. In all, fifty-five persons were invited to participate on this jury of experts. Of this number, four did not respond to the invitation, leaving fifty-one jurors. Geographically, this jury represented nineteen different states; professionally it included high school teachers, city supervisors of industrial arts, local directors of industrial education, a state supervisor, and teacher educators.

E. Each juror was informed of the primary objective of the study and given full directions concerning his role in the study. Essentially, the task of each juror was to study each cirterion or statement and to indicate his decision as to whether or not he accepted the statement as a principle of tool panel planning. Space was provided, also, to indicate acceptance if the juror wished to reword the statement and to write-in additional statements.

F. As soon as the returns were received,[3] thoughtful consideration was given to any write-in statements submitted by the jury. These proved to be exceedingly few in number and their concepts were not adjudged to merit inclusion with the original criteria. Then, data for each criterion were grouped into two categories: (1) the number of jurors accepting the statement or criteria as a principle and (2) a combination of (a) the number of jurors not accepting the statement as a principle, (b) the number of jurors accepting the statement if it were reworded, and (c) the number of jurors not responding to the statement. This dichotomy simply provided a group of data for which there was 100% acceptance on the part of the jury and a second group of data concerning which the jury was in various degrees of disagreement. The degree of acceptance and non-acceptance of the jury concerning a particular criterion was now expressed in percentage. These data were tested for reliability by computing the standard error of a percentage by means of Garrett's[4] formula and interpreting it in terms of Student's table of t[5] for use in determining the reliability of statistics.

---

[2]Note: This check worked effectively because neither item was accepted by the jury.

[3]It is interesting to note that jury response was 100%. Not a single reminder letter was sent to any juror.

[4]Henry E. Garrett, Statistics in Psychology and Education, (New York: Longmans, Green and Company, 1947), p. 218.

[5]Ibid, p. 190.

G. Within the limits of time available to the investigator for study of this problem, visitations were made to numerous industrial arts shops for the purpose of photographing and making dimensioned pencil sketches of tool panels, tool arrangements, and tool holding devices which supported the principles established by the jury of experts in this study.

The majority of the photographs were taken in industrial arts shops that were recommended by the nine Area Coordinators of Industrial Education as shops having outstanding tool panels, tool arrangements, or tool holders. A two-page questionnaire was prepared to procure these recommendations.

VII. Summary of the principal findings

As outlined in the Procedure, the criteria submitted to the jury of experts were subjected to statistical analysis. Those criteria meeting the test for reliability at the 1% level of confidence were accepted as principles for arranging, mounting, and storing hand tools used in industrial arts shops. A list of these principles follows:

1. A tool panel should be adequately lighted,preferably by both natural and artificial light.

2. A tool panel should be pleasing to the eye and give a feeling of orderliness.

3. A tool panel and its toolholders should be of simple, cleancut design and construction to require a minimum of maintenance and cleaning.

4. A tool panel or cabinet should be economical of wall or floor space, yet large enough so that;
   (a) several students can use the panel simultaneously.
   (b) it will hold all present shop tools with sufficient space for future expansion and acquisition of additional tools.

5. A tool panel should be of such height and depth and so located that the average student will be able to remove and replace any tool.

6. A tool panel should be designed so that each tool has a definite place.
   (a) it will be convenient (require short travel distance) to work stations where the tools will be used.
   (b) it will have sufficient space on front and sides to prevent student congestion.
   (c) it is on or near natural traffic routes.

7. A tool panel should be designed so that each tool has a definite place.

8. A tool panel should be designed to facilitate tool accountability.

9. A tool panel should have smooth, unbroken surfaces to permit the mounting of tools in any location on the surface.

10. A tool panel should utilize a simple method of tool identification to differentiate among:
    (a) tools in different areas of the same shop.
    (b) tools in different shops of the same school.

11. A tool panel should be designed and constructed so that it can be locked.

<u>The Following Principles Refer Specifically to Tool Arrangement</u>

12. Tools should be arranged on the panel so that their withdrawal or replacement will not interfere with the other tools.

13. Large, heavy tools should be arranged near the bottom of the tool panel.

14. Small, light tools should be arranged higher on the panel or on doors (if doors are utilized), but in such a manner that they will not cause interference or annoyance in opening or closing the doors.

15. Tools should be arranged on the panel in logical, organized groupings based on a balanced judgment involving the following:
    (a) Group together all tools of one area or activity (i.e., all woodworking tools together, all metalworking tools together, etc.)
    (b) Group together all tools of one area that are used together (i.e., brace and bit, rule and scriber, etc.)

16. Tools that are used most frequently should be located in the most accessible positions.

17. Tools should be arranged so that students are not subject to safety hazards in removing or replacing tools.

18. Tools should be arranged to conserve space on the panel wihoout overcrowding.

<u>The Following Principles Refer Specifically to Toolholders</u>

19. Toolholders should be sturdily constructed of durable material to withstand heavy, frequent use.

20. A toolholder should be designed so that only the proper tool can be returned to the empty holder.

21. A toolholder should protect the tool from damage or undue wear.

22. A toolholder should be designed so that the tool can be replaced in one position only.

23. A toolholder should facilitate the swift, easy removal and replacement of the tool:
    (a) The simplest means of tool removal is a straight off-the-

holder motion; replacement is a straight on-the-holder motion.

(b) The next simplest means of tool removal is an up-and-off-the holder motion; replacement is a down-and-on-the-holder motion.

24. A toolholder should support the tool so that its handle or other natural grasping point may be utilized in tool removal and replacement.

25. A toolholder should support the tool firmly so it cannot be jarred from its proper place by shop vibration, opening or closing doors, etc.

26. A toolholder should permit quick and easy identification and selection of sized tools.

27. A toolholder should require simple installation (preferably from the front) to facilitate easy replacement or relocation.

28. A toolholder should be designed to facilitate a brief visual inspection for missing parts of the tool.

29. A toolholder should offer the maximum safety protection to those who use the panel.

30. A toolholder which supports one of several tools of the same size and type should be constructed so that any one of the designated tools will fit into it.

31. A toolholder which supports more than one tool of the same size and type should have a means of indicating how many tools belong on this toolholder.

32. A toolholder should support the tool so that its weight causes the tool to hang straight and in proper alignment.

Included in the list submitted to the jury of experts were the following criteria:

100. A tool cabinet of the floor-model type should be designed with a slanting shelf at the bottom to:
    (a) prevent tools being piled at the bottom.
    (b) provide greater visibility of tools stored on the bottom shelf.
    (c) provide greater ease in selecting and replacing tools stored on the bottom shelf.

101. Long-handled tools (i.e., hammers, framing squares, etc.) should be arranged near the top of the tool panel.

102. Tools should be arranged on the panel in logical, organized grouping based on balanced judgment involving the following:
    (c) Group together all tools of one area that are used in sequence (i.e., center punch and twist drill).

103. 103. A toolholder should provide some means of tool identification.

Item 100c (above) was found to be reliable at the 5% level of confidence, but not at the 1% level. The other items (100a, 100b, 101, 102c, and 103) were found not to be reliable at either the 5% or the 1% levels of confidence (see Table 1).

The pictorial drawings of tool panels and toolholders which support the principles formulated in this study are not included in this report.

VIII. Immediate uses for the findings of this study.

A. A summary of the findings of this investigation is presently being considered for publication by one of the professional magazines in the industrial arts field.

B. Pertinent data from this research will be presented in the form of a paper to be read at the 8th Annual Conference of the Pennsylvania Industrial Arts Association at Hershey, Pennsylvania on Friday, October 23, 1959. If departmental approval is forthcoming, it is anticipated that a summary of the principal findings will be duplicated and disseminated in a special leaflet to those present at the conference.

C. Data from this study will be incorporated immediately (Fall, 1959) into two courses in shop layout and management (I.Arts 400 and I. Ed. 450v). As a result of this investigation, a special unit of instruction on tool panels and toolholders will be added to the present syllabi of these courses.

D. Plans are underway to expand this study by revising the format of the principles so that they can be weighted for use in evaluating tool panels and their tool holders in an objective manner.

Table 1

Summary of Statistical Analysis of Data

Item Number	Number of Jurors Accepting Statement	Number of Jurors Not Accepting Statement (*)	Percentage of		SE of %	Significant at levels of confidence	
			Acceptance	Non-Acceptance (*)		5%	1%

Persons from Ohio, Michigan, Indiana, Kentucky, Arizona, Missouri, Illinois, Maryland, Pennsylvania, West Virginia, Idaho, Minnesota, California, and the District of Columbia attended the 15th Annual Ohio Apprenticeship Conference. The conference represented industry, labor, education, government, associations, and other organizations. Topics presented at the general meetings were: (1) "Economic Opportunity Act," by Richard Werner, (2) "Manpower Development and Training Act," by H.R. Przelomski, (3) "Education Departments' Apprenticeship Legislation," by Harry F. Saxis, and (4) a slide presentation on the Negro American Labor Council by Frank Evans and Joseph S. Kopas. Individual craft meetings were held by the (1) barbering trades, (2) bricklaying and stone mason trades, (3) carpentry and woodworking trades, (4) cement masons, lathers, and plastering trades, (5) electrical trades, (6) graphic arts industry, (7) industrial maintenance trades, (8) iron-working trades, (9) machine tool and metal trades, (10) operating engineering trades, (11) painters, decorators, and paperhangers, (12) plumbing and pipe fitting trades, (13) roofing trades, and (14) sheet metal trades. A complete transcript of all speeches, question and answer sessions, and group meetings is given. (EM)

CONFERENCE SITE

The Fifteenth Annual Ohio Apprenticeship Conference sponsored by the Ohio State Apprenticeship Council in cooperation with the Bureau of Apprenticeship and Training of the U. S. Department of Labor and the Trade and Industrial Education Service of the Ohio Department of Education was held on October 26, 27, 28, 1965, in Dayton, Ohio.

The Sheraton-Dayton Hotel served as the Conference Headquarters and also accommodated the various sectional and general meetings.

ATTENDANCE

The conference was attended by 625 guests representing the following states: **Ohio, Michigan, Indiana, Kentucky, Arizona, Missouri, Illinois, Maryland, Pennsylvania, West Virginia, Idaho, Minnesota, California,** and the **District of Columbia.** This was one of the largest conference held to date.

All segments of Industry and Labor were represented including representatives from schools, government, public, associations and other organizations.

The attendance record at this conference definitely indicates the wide interest that is being shown in organized apprenticeship throughout Ohio and surrounding states.

GENERAL STATEMENT

The Executive Secretary and Members of the Ohio State Apprenticeship Council along with the Bureau of Apprenticeship and Training and the Trade and Industrial Education Service, wish to thank all the conferees for their interest in the various sessions. It was because of **your** participation and many contributions that made this conference such a success.

We of the Ohio State Apprenticeship Council welcome any suggestions you may have to improve the Conference Program. Please feel free to send any comments or suggestions you care to make to us at: **220 Parsons Avenue, Columbus, Ohio** 43215.

SPECIAL TRIBUTE

We wish to give a special thanks to the Frigidaire Division, G.M.C., Plant in Dayton for their willingness to permit the conferees to visit and view the operations of their establishment. This was another session which contributed immensely to the success of the Conference.

The Dayton Building Trades Council provided clerical assistance for the various sessions while the Dayton Convention Bureau assisted with the registration activities which was deeply appreciated.

We want to thank the Ohio Construction Council for sponsoring the 'Hospitality Welcome Night' on Tuesday evening which was thoroughly enjoyed by all the conferees.

And finally, we also extend thanks and appreciation to the staff of the Sheraton-Dayton for the efficient way they handled all the many conference details while being subjected to the hazards of a renovation program which was underway at the hotel.

CONFERENCE PLAN

The Fifteenth Annual Ohio Apprenticeship Conference officially opened on Tuesday, October 26, 1965, at 9:15 A.M. with the Apprentice Instructors Workshop. Mr. Ralph C. Neal was the Coordinator for this session. He is the Apprenticeship Consultant for the Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio. The session was broken down into two groups - Basic Instructor Training Course and the Advanced Instructor Training Course. The instructors were Mr. William Stewart and Mr. Paul Muntz who reported that there were 57 in attendance at the Basic and 49 in the Advanced making a total of 106 who participated in this particular Workshop.

At 2:00 P.M., Tuesday, the conferees attended the General Meeting to hear Mr. H. R. Przelomski, Mr. Richard Wenner, and others speak about the **Manpower Development and Training Act**, the **Economic Opportunity Act** and **Education Departments' Apprenticeship Legislation.** There were 245 who attended this Opening Session.

At 6:30 P.M., Tuesday evening the conferees met in the Grand Ballroom for the Open House "Hospital Welcome Night" sponsored through the courtesy of the Ohio Construction Council.

The program for Wednesday, October 27th included individual craft meetings of the Building and Construction Industry; sectional meetings covering the Barbering Trade, the Graphic Arts Industry, the Industrial Maintenance Trades and the Machine, Tool and Metal Trades. The program also included a visit to the Frigidaire Division, G.M.C., Dayton, Ohio.

At 6:00 P.M. Wednesday, October 27th the conferees assembled in the Grand Ballroom of the Sheraton-Dayton Hotel for the Conference banquet which was followed by the main general meeting featuring the principle speaker, Mr. Charles W. Danis, Manager and President, B. G. Danis Company, Dayton, Ohio. Mr. Michael Liskany, Executive Secretary, Building Trades Council of Dayton, Ohio, served as the Toastmaster for the evening session.

The Honorable William O. Walker, Director of the Ohio Department of Industrial Relations, welcomed the conferees on behalf of Governor Rhodes and himself.

The program for Thursday morning, October 28 included a Joint Session for the Building and Construction Industry and a second session for the Industrial Maintenance Trades and the Machine, Tool and Metal Trades.

The Conference closing session commenced with a luncheon at 12:15 P.M. in the Grand Ballroom of the Sheraton-Dayton Hotel. This session consisted of an informal program which was presided over by Mr. John E. Morley, Builders Association of Mahoning Valley; Member, Ohio State Apprenticeship Council, Youngstown, Ohio. The Conference was summarized by Mr. William C. Webb, Director, Region VI, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio.

GENERAL MEETING

Tuesday **Opening Session** **October 26**

PRESIDING

Ray J. Flory, Representative, Maumee Valley District Council of Carpenters; Member, Ohio State Apprenticeship Council, Toledo, Ohio.

SPEAKERS

H. R. Przelomski, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Washington, D. C.

Richard Wenner, Rural Task Force, Office of Economic Opportunity, Washington, D. C.

Harry F. Davis, Supervisor, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio

Frank Evans, International Executive Board Member, Allied Industrial Worker Union, Cleveland, Ohio

Dr. Joseph S. Kopas, President, Human Engineering Institute, Cleveland, Ohio

* There were 245 in attendance at this meeting.

GENERAL MEETING

Mr. Ray J. Flory, Representative, Maumee Valley District Council of Carpenters, and Member, Ohio State Apprenticeship Council, Toledo, Ohio, opened the meeting and then introduced **Mr. Richard Wenner,** Rural Task Force, Office of Economic Opportunity, Washington, D. C. who spoke on the following topic: "Economic Opportunity Act."

"I would like to visit with you for a little while this afternoon about one of the real fascinating things that is happening on the American scene today. Some of the most progressive bits of legislation and programs have happened these last few years. There was a great spirit of new things and new ideals in the New Frontier of Mr. Kennedy, and, of course, Mr. Johnson has gone on this last year and a half or two years with a fine program to better our society - all the way from Medicare to Highway Beautification. The Economic Opportunity Act is probably going to stand out in history as one of the real break throughs in our society.

"The Act is administered by an organization in Washington called the Office of Economic Opportunity - the formal or maybe the fancy words for what is called War on Poverty or the Anti-Poverty Program. Let's go back a little bit and think about why Mr. Kennedy and Mr. Johnson undertook this program, what is its interest to you as a citizen of Ohio, to you as leaders of labor and management, to you who are active in the job development field.

"The real beginning started with a book written by a man by the name of Michael Harrington, called the 'Other America'. The story goes when Mr. Kennedy read this book he turned around to some of the staff and said 'Is it really so?' The staff went to work on this and particularly so in the Department of Justice and Juvenile Delinquent Divisions. Under his brother, Robert Kennedy, they did staff studies which were coming along but were not completed before his assassination.

"Mr. Johnson, looking over the things that were in the files at the time he assumed the presidency, saw the staff studies and told them to get them done. When he had a chance to look at them, they appealed to him because of his background, remembering that he came out of a poor circumstance in Texas and that he had been active in the National Youth Administration in Texas, during the New Deal. He had been concerned with the CCC operation. Much of what he saw in these staff studies appealed to him so the word went out throughout the departments in Washington, 'Let's put together a package we can call the Anti-Poverty program to face this issue that was started sometime ago.'

"Well, what did Michael Harrington's book, 'The Other America' talk about and what is the 'Other America'? The facts are about this way, that of the forty-five million families in this nation as of the 1960 census, 9.3 million of them have average family incomes of less than $3,000 a year. Three thousand dollars therefore is the

figure that became the arbitrary benchmark for defining a poverty income.

"It is a good figure and it gives you a starting point to talk about statistics, but, frankly, we come to understand because there is a great difference between $3000 to an elderly couple on a small farm with a big garden that they own themselves in down state Ohio, than there is between $3000 for a family with nine kids in downtown Cleveland. So, $3000 is a pretty arbitrary thing. The other thing that is wrong with it is there are more ways of being poor than just plain monetary poor. There may really be enough money in the family but somehow it doesn't get to the right place. The children may still be at a disadvantage because they may not have the opportunity that they should have.

"We really are very excited about that figure, but it still gives us a benchmark that nine million out of the forty-five million families in the United States have an income of less than $3000 a year.

"The other word that is going around in our country in the last few years is that we have an affluent society. Most of us are able to have a good cut of steak once or twice a week, get most of our children to college, own two cars, and own or are buying homes, that this is a pretty well off nation.

"I was talking with one of your members and he said that in the metropolitan area in his part of Ohio the employment is down to two per cent. In my Pennsylvania, it is down to 3.8 per cent, and I can remember five to eight years ago in the 50's when it was nine per cent. So, we basically, have an affluent society and yet there is in our midst twenty per cent of the families who are kind of out of the main stream of the society, out of the main stream of our economy, and it is to this group that we have been looking to see how we can bring them into our society economically and socially. There is no doubt about it, we are quite aware that one of the real solutions to poverty in this nation in this group is a continuing of the expanding of economy.

"As I said in Pennsylvania with an expanding economy in this day and age, we have 3.8 per cent unemployment but back five or eight years ago when we were in a deflationery economy and when it was the attitude of the people to hold things back instead of expanding our economy, we had a nine per cent unemployment rating in Pennsylvania. So, if we can continue in the series of devices that you are aware about in the Federal government and elsewhere to continue expanding economy, we will in part get at the problem of poverty but this is not going to get at everybody.

"We still have the problem of a great number of people who were more affluent in that the total economy is not going to reach and it is at this 'hard core root' that our program is pitched. You might say we are a group of dreamers but we operate on the basic theory that there is no part of our society and no group in our society that should be a group of second class citizens.

"The average family income according to a census taken last year in the nation was $7,400. So, if the average income throwing the Rockerfellers and you and me together is $7,400, there is no reason why there should be twenty per cent of the families with incomes of less than $3000, and it is at this 'hard core root' that we are addressing a series of programs.

"The Economic Opportunity Act is a collection of programs only three of which are really administered by our agency, and if anybody tells you about a great bureaucracy that we have in our agency, the latest figure on employment in the Office of Economic Opportunity is 1,362 people who administer our program at this day and age. We really administer only three programs by ourselves one which is 'The Community Action Program' - which I want to come back to - 'The Job Corps Program' and the 'Domestic Peace Corps.' The other programs are farmed out.

"Mr. Johnson said to the department 'What can we do?' 'How can we put together a package of programs for a War on Poverty?' He went around to the Department of Labor and to the Department of Agriculture and elsewhere and said 'What do you have?' 'What do you propose?' So, they made proposals and these proposals have really been farmed back to them for administration. Mr. Schriver is responsible for the over-all coordination but the majority of the programs are administered by the departments. Let us just run down through the titles to give you a picture of the various things that are being tried and the services that can be available in your community to your neighbors, to the young and old people of whom you are aware.

"Title I provides for a Neighborhood Youth Corps Program which is very similar to the National Youth Administration of the New Deal. This is for young people, boys and girls 16 to 21 years of age to work in their own communities. The first intent of the program is to keep the youngsters in school so they may receive a high school diploma or to get them back in school if they do not have a high school diploma because in this day and age it is a pretty darn indispensable tool. Number two is to provide a meaningful work experience for them and an opportunity for them to learn what a boss looks like, to take orders to get to work on an appointed hour to learn just a few good decent work habits. The third intent is to earn some money which may help to clothe the person and perhaps leave some at home in order to provide some direction for this young person. And the final intent is the hope that out of the work training there would become the beginning of a vocation for this young person, that he might go on and become a part of your workers and become a contributing member of our society.

"Another program under Title I is the 'Job Corps Program.' This is like the CCC of the New Deal. There are residential camps for boys and girls 16 to 21, where they go away if they do not have a high school diploma or can't read or write to help them catch up so that they become literate. If they can't read, write, or do arithmetic, or if they have a health deficiency, this program helps to get them straightened out, to give them some good physical exercise and teach them how to roll out of bed at a good early hour in the morning to do a good hard day's work. They are tested for a vocation and taught some vocational skills. In some of the urban camps there will be extensive vocational training so when a boy or girl comes out of a 'Job Corps Camp' he can be a contributing full member of society.

"The last program under Title I, is a college study program where young people in college can do a meaningful job on the college campus for the institution. Perhaps off the college campus in town, earning income to support himself in college and get himself through

college. We administer the 'Job Corps' and the Department of Labor administers the 'Neighborhood Youth Corps' project, while the Department of Health Education and Welfare administers the 'College Program.'

"Under Title II, in addition to 'Community Action,' there is an adult literacy problem to train people to read, write and do arithmetic. If you read the statistics of this nation, there is still an appreciable number of people who literally cannot read or write. We have just funded a project in Mississippi, where they intend to train a hundred thousand which will be primarily Negro farm workers to read and write to start them on the beginning of a vocation to be a part of our Educational Welfare, through your State Department of Education - the local school district.

"Under Title III, there are small loans for farmers and for cooperatives, administered by the Department of Agriculture and there are programs for migrant farm workers and for Indians because these two are part of our nation who have been pretty much left behind as time went by.

"Under Title IV, the small business administration has a loan program to provide a special type of small loans for people who cannot presently qualify for any other type of credit even the rather liberal credit terms of the Small Business Administration. Here the plan is to set up in the communities small business development centers which will be sort of a focus point to help people who want to form a small business to get loans to get them started and to provide some national assistance, some in-service training, how to keep books, collect bills, and run a small business.

"I would think you people would be interested in this small business program administered by the Small Business Administration. Many of the folks in your trades are self employed and under this type of loan a person can get enough funds to start out a business in general, and this type of business or economic development contributes to the total economy of your community.

"Title V, is a program administered by the Department of Health Education and Welfare, for work experience for fathers or heads of families. It can be for mothers who are on public assistance. This is another program where we are trying to get at the people, who are presently sittings around taking relief, to get them out of their homes—away from a bar or wherever they may loaf away their time and get them in a meaningful work experience to start training them for a job or vocation of some kind so eventually we can get them off public assistance into a full-time occupation.

"I think it is kind of obvious that some of the old programs, as fine as they are, have not gotten to the roots of poverty. They have kept families together and have kept them from starving to death, but they have not gotten to the inner problems of these people. They have not gotten to the problem of motivation; they have not talked about a new job, a new way of life for this type of person, so in the Economic Opportunity Act, we are going to try with a variety of tools and with some experimenting to see if we cannot get at this group of people. We do not expect to succeed at every instance, but we shall do the best we can.

"Sometime a little while ago someone asked Secretary of Labor,

Wirtz, on television what he thought was the minimum amount of permanent people out of work. He said in answer to that question that there were no statistics since there was no research on this subject at all but that in his judgment there was perhaps one per cent who were so disabled and incapacitated physically and mentally that they could not contribute any work to society. He further thought that there might be another one per cent of similar people who have problems of motivation and psychological ones that they likewise could not be trained or anything else. In his judgment the figure was something like two per cent of our people who have to be taken care of by us. But, two per cent is a lot different than twenty per cent which is what we are confronted with in our business.

"The last part of the Economic Opportunity Act, before I go back to the basic program of Community Action, is Vista. Vista stands for the first letters in Volunteers In Service To America. This is the Domestic Peace Corps where people are asked to sign up for a year just like the Peace Corp's people who go abroad to contribute a year of their lives to their fellow men. We are getting lots of college kids who after the first four years of college, and before they go into law school or something like that sign with us. We are getting a good share of retired people too as you have no doubt heard in the recruiting of Peace Corps and Vista. We are also looking for people in the prime of life who can take a year or two out of their lives to contribute to their fellow man.

"If you know people in these circumstances, here is a real opportunity to do something. We have fascinating stories about these people who are going into these communities that have been passed by that they are really rendering a great service.

"I am sure you have been reading in your papers about the Community Action Program and some of the good points and bad points about it. We get a lot of publicity.

"We are not a conventional agency nor are we working with programs that have been proven in laboratories or colleges or by another governmental agency. We are not an old bureaucracy. We are a completely new organization that is trying to use a variety of tools to do a very novel job to get at a sector of our society that is not easy to get to. We are going to ruffle some feathers; we are going to change things, we are going to make an occasional mistake, but the basic trend is always upward.

"When you work with a man like Sergeant Schriver he wants action and he is willing to take a risk now and then. He is interested in trying something new. In the Community Action Program, we are generally saying that this group should be quite independent of the other agencies, both public, the government, and private, the United Funds, and the social welfare agencies.

"We want an agency that is independent and has a flexible approach to things on a board of directors (governing body) of Community Action agency. We are asking that everybody and every sector of the community be represented. We are asking the mayor or someone from the county government, or someone from the city government to be on the Community Action Committee. We are asking that the private agency such as the Health and Welfare Council and members of management and labor to be on these too.

"We go back to a very fundamental face in our democracy that even the poor understand the issue of their day. He has a better understanding of the problems that face his city, or his rural slums than the white collar guy who went to college who thinks he knows it all. These people have been thinking about their problems and they know what is wrong, and where they have been by-passed. They know how hard it is for them to get equal things. We are requiring that we live up to the faith of what is happening in this day and age in our society and that we include the minority on these boards. The Negro, the Indian, or the Mexican American community whatever it may be will be on the board in the same relationship that they are in the communities. These people are citizens—one man one vote—just like the rest of us in this democracy and they ought to be represented in the decision making process when we start talking about them.

"The purpose of this Community Action Agency is not to become a new super government, not to take over everything such as the city hall, the county government, the health and welfare council, the Manpower Development and Training Act, or the Department of Public Welfare. They aim directly at the low sector of our society and where one of these programs does not have the resource financial or otherwise to do a particular problem then we will use the funds from the office of Economic Opportunity.

"Basically, when it comes to training programs we say training is part of the Department of Labor and is under the Manpower Development and Training Act, and that is where training programs should come. We turned down applications from all over the nation because they come to us saying that the Department of Labor isn't doing anything or we have never heard of MDTA, out here in this rural county in Missouri. We go back and say to them the purpose of your Community Action Agency is to mobilize the existing resource of your state. You just go find the Department of Labor people in Missouri and the Vocational Education people in your state and get them busy. At the same time we on the Washington level will call Hank Przelomski and Tom Royal and the other good guys over in the Department of Labor and say 'Do you know that nothing is happening in the MDTA, in Southeast Missouri. So they will say 'I am not sure, but I'll soon find out.' And this is the way we get Community Act.

"If a training program just does not fit under MDTA—there was a question in some area where they wanted to train babysitters, this was a way to provide a service to the community and some income to some young girls. This could not come under MDTA, then maybe the office of Economic Opportunity could move in. The problem in the rural America is that we do not have good counselors. We are still leading farm boys to a future in agriculture. While there is a future in agriculture for a few commercial farmers, there isn't a great future in agriculture as there was in past years. The statistics on this if you are interested is this; that we are losing farms at a rate of 120,000 a year and we are now down to 3½ million farms from five million in 1950. The projection is that by 1980 we will lose another million and a half farms and we will be down to something like two million farms by 1980. So there is a continuing exodus from the farms and from rural America and they are coming to town.

"There is an estimate, that a million and a half Negro farm families or rural families (some are non-farmers) will move out of the

South in the next five years. A million and a half, rural families will move out of the South. Why?? Because, where I worked in the Delta country of Mississippi there used to be on these big plantations a couple hundred shacks with Negro families, where these people used to hoe and pick cotton. Now, the only type of labor that is necessary is the tractor operator and cotton picker operator. A cotton picker costs twenty thousand dollars. Agriculture is becoming mechanized and there is just no place for this. The reason for the Watts incident in Los Angeles is very simple, the Negro population in suburban Los Angeles between 1950 and 1960 increased by a hundred and seventy-seven per cent and nothing was done to take care of this one hundred and seventy-seven per cent increase.

"I was reading in a magazine today that the mayor of Los Angeles still has not gone into Watts. This is the way we turn our back on the Watts and the rural and urban slums.

"To you folks who represent leadership in local communities, we ask you to join the war on poverty if you don't mind the word 'war'. Become active in your Community Action Agency. Make sure the Community Action Agency has a good economic job development sub-committee where you can put on a series of people from labor and management who understand about the job market and understand the needs of the economic community in which you live. Provide leadership to your local people in this area of job development. The Economic Opportunity Act, is really two things, as I have pictured it, and you can see a great deal is motivation and it is aimed at the human spirit.

"Vice President Humphrey, while making a speech one day said 'Poverty of the pocket book is bad enough, but poverty of the soul is worst.' I think all of us can appreciate this situation. It is not the American Spirit to want to sit around and take relief checks. That is not what made this nation what it is today. These people are not anti-American they are just our brothers who have somehow not gotten into the swing of things the way the average American has.

"The second part of the Economic Opportunity Act, is the person, motivating him, training him, and so forth. There has to be an economic opportunity for him in terms of a job which in dollars and cents contributes to an expanding economy.

"The whole theory of the income tax reduction in the last year is that the reduction will continue to build a larger—a more accelerating economy. If we can bring the lower income groups into a larger scale where their average income is up about four, five, six or seven thousand like the National average, it would more than accelerate our over-all economy. While the war on poverty is two things to you, to me it is one method of expanding our economy and provide jobs for everyone and try to continue to make our United States a more highly sophisticated economy enterprise. And, the second thing, it is a great humanitarian effort to help our brothers to become a part of our affluent society."

Question: by **Arthur Schrader,** Board of Education, Toledo, Ohio, "What approach would you suggest to motivate the 'Hard Corps Group' who resist and resent effort and retraining and remedial education?"

Answer: "We are sure that the place to begin is as young as

possible. We are not absolutely sure that you can motivate a fifty year old farmer or coal miner who has given up on the world. Occasionally, you can get him in a new setting with some training with something that appeals to him. Our basic approach is to get down at the bottom—to get the school child who is falling behind and who is about to fail third grade, to get remedial reading so that he doesn't fail and become a school drop out.

"I am sorry that there is no pat answer to this, but we feel that in a local community if you sat five, ten or fifteen of the leaders of the community down around the table with the school folks, the welfare folks, and with the labor, management and so forth, that you can find out why people are hard core and don't want to retrain and can get at them. We suggest that in a survey they be more than just looking for a bunch of statistics, but trying to find out what is wrong in the family, why the father does not work, why the last three kids are school dropouts and try to get at the more hidden things—the deeper problems of people."

Question: Mr. Schrader, "How do you suggest that the illiterate people be brought into the adult programs and by whom?"

Answer: "There is no doubt that our efforts in adult literacy are insufficient. We are going to need a lot more money in the years ahead if we are really going to do things that we think and know what the local people are demanding of us. We have divided up our current proportion by counties and by cities. We get applications from cities for ten times as much financially as we can give them.

"I am hoping that we have a billion and a half appropriation this year. I hope that we will have a five billion dollar appropriation in a year of two. If we are going to sift these people out and get them going, it is going to take a lot of money. This should not be a permanent expenditure. One of the interesting things of our Mr. Schiver is that none of us are supposed to think upon ourselves as having a permanent program. That we are pretty much one shot operators.

"The other thing that underlines our business is that the Schriver concept and the whole concept of the Act is that we nudge conventional forces along. In other words, we would just like to drag the Mayor into Watts and make him feel ashamed of himself and get the Los Angeles City Government to take care of its own problems instead of waiting for Uncle Sam in Washington 3,000 miles away to do it.

"Education is not just one to twelve with English and History or Math. There are such things as counseling and such things as remedial reading.

"I know a child from a family both of whom were college graduates who had a divorce last year and this child failed the first grade. The child has an I.Q. of 140, but he failed first grade, because he has physchological problems.

"In this school system there is no school psychologist. This is the sort of thing that we need to do. In the long run we are going to have more ourselves and we are going to have to push the local community."

Question by **Calvin J. Malone,** Operating Engineers #66, Pittsburgh, Pennsylvania, "What can you expect to gain with these ten weeks training programs for 16 and 17 year old boys if they are not placed on a job after the training has been completed?"

Answer: "If these programs are to be done right, they should tie in closely with the State Employment Service. If we are just going to pay kids twenty dollars a week to wash dishes which is just a dead-end occupation in a schoolcafeteria, this is about as good as nothing. In fact in this type of job experience, let's face it, these are human beings too. If all they get out of a ten week's training program is that life is washing dishes in a cafeteria, they may give up at this point.

"It may be simple to take relief checks for the rest of their lives because there isn't much romance in washing dishes for the next fifty years of your life. You must have a meaningful program that will teach them to work with a good supervisor who might be teaching them how to trim evergreen trees on the school lawn or do work around the parks and so on."

Question: by **Ray Lesniok,** IUE Local 707, Cleveland, Ohio, "For the development of an affluent society, how are we to develop the responsibility that goes with this hard core group?"

Answer: "In the 'Neighborhood Youth Corps' program part of this will be developed through good work habits and things of this sort. How you retrain an adult on responsibility is a much more difficult problem. If we get at them young, we hope we can win most of them."

Mr. H. R. Przelomski, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Washington, D. C. was then introduced as the next speaker who spoke on "Manpower Development and Training Act."

"Primarily, I am going to talk about on-the-job training program. We don't have much on-the-job training in Ohio, as we would like to see it.

"I will save that for the end so you can get at me when I am done. I think it is only fair that we take a look at what is happening in the program.

"I think most of you know that the Manpower Development and Training Act of 1962 has authorized one of the most ambitious national programs of job training and manpower research ever undertaken in this nation, and at that time, I was in the City of Detroit, as State Supervisor of Michigan. We were developing programs to retrain people at Chrysler. At that time we had a large lay-off at Chrysler. Some part of Michigan the unemployment rate was approximately 23 to 28 per cent. The State average at that time was 8 or 9 per cent. Ohio at that time was around 6 or 7 percent. Ray informed me this afternoon the rate of unemployment in Ohio was approximately 3.3 per cent. This is true in the state-wide picture. I think there are sections and pockets in Ohio where the unemployment rate is a little higher.

"So, recently, the Secretary released some statistics that are exciting, and it is pretty much the opposite of what we had in 1962. However, our problems are not over, in fact, some of the statistics

we release do not mean too much to people. Maybe if we say it this way, you will understand it a little better.

"The gross National Product is increasing at the rate of 4½ per cent a year. There are 2⅓ million more of non-farm payroll jobs this September than there were a year ago and that unemployment in September droppd 4.4 per cent for the first time in eight years. This is the other society that Dick Wenner was talking about the affluent society. Now, to give you a better idea.

"Nearly 10,000 more people are going to work on pay-roll jobs each morning now on the average so we are cutting down unemployment at the rate of 4,000 people a month. Ninety-eight out of every 100 married men who are available for work have jobs. Production worker on manufacturing payroll are averaging $3.49 more earnings each week than they were a year ago.

"This summer we absorbed the biggest wave of young workers that ever came along, and we still reduced unemployment in this group. Now, we still face the problem of unemployment among teenagers. Three quarters of the million teenagers looking for work can't find it. This is twenty-five per cent of our total unemployment.

"Unemployment among non-white groups, mostly Negroes, is two times the general rate. We have civil, meaning equal rights, now we still don't have civil results. We have to concentrate on these areas. The interest is in the Manpower Development Training Program.

"The fiscal year (66) will be directed towards this group although we will try to have the balance in a mix of all types of programs.

"The Economic Expansion is essential but it is not enough. The rest of the answer is better education, better retraining programs, better matching of people in jobs. When I came down I was reading the want ads of one of the New York papers, and it is amazing the number of columns of want ads that appeared in the paper. Now, since there are so many labor management people here, I think you are all aware that the labor dispute picture has really shown excellent improvement. Within the past sixty days the Marathon strike has been settled, there was a settlement in steel, the coal field problem solved itself, the Arrow-Space dispute has been worked out, the nationwide shut down in the oil industries was prevented in the last hour, new contracts have been signed covering most of the telephone industries, new contracts have been signed covering the papers, thus the newspaper strike is over in New York, and we now have newspapers in New York City. United Auto Workers reached an agreement recently. So, with the economy of the country moving, you sometimes feel that the problem of unemployment has been dissolved.

"Going back again to this growing picture that we make, and as Dick mentioned about the affluent society, which includes most of us here, the great majority of Americans are all well-trained, have steady jobs, enjoy good health, good housing, normal family life, and they benefit from government efforts to expand the economy through such measures as the recent tax cut. It includes a million Americans who have been side tracked from the central path of national growth usually either by reason of color or because they live in the rural backwaters, inadequate training, they have trouble finding and holding jobs.

"While the Gross National Products have been rising, they in passing on poverty from generation to generation, the final etching of the statistical profile of the two Americans can be found in the figure and they will repeat some that I have already mentioned.

"It was just released at the third quarter during the past three months the Gross National Products have jumped by eleven billion dollars to reach an annual record rate of 677,000. The jump exceeded by 20 per cent the projection of the Council of Economic Advisory; progress was at an annual gross rate of about five per cent double the rate of the Eisenhower years. What's more, the gross has been imbalanced and has affected all sectors of the economy. It has not been accompanied by any raises in wholesale prices, and wage rates have held about even with the increase.

"Pre-activity on the employment side the gross is fully reflected in the figure for white people. During the last quarter, the rate for unemployment for a white person average 4 per cent, the lowest quarterly figure since the third quarter of 1957. In July and again in September the figure dipped slightly below the 4 per cent in unemployment among white teenagers also on a down grade and drop 12.9 per cent to June 11.4 per cent in September, the non-white unemployment in the last quarter actually showed an increase. It is up from 8 per cent to 8.3 per cent. While white unemployment decreased in one month, the non-white rose in the next three months.

"The only decrease we had in the non-white unemployment was in the youth, and it was during the period of August when there were 10,000 trainees in the 'Neighborhood Youth Corps' one of the poverty programs. So, as we go into September with the summer program ending, non-white teenagers in unemployment rose by 7 per cent to high of 27.5 per cent. More than a quarter of the non-white teenagers in job market in other words are unemployed.

"Poverty next generation is already in sight and this is not to say that we didn't make any progress. The total unemployment has dropped from 6 per cent back in 1962 when we were talking about the Manpower Development and Training Program down to 4.4 per cent in the recent years. During this period you realize that a million persons newly entering the job market each year have been absorbed so the poverty program that has been lost, the special program for meeting the problems of the poor that are beyond the reach of the general economy group, may even show that this picture will look better a year from today. So, that gives you pretty much of a picture of where we stand, where we have been, and where we are going.

"Let's talk about the Manpower Development and Training Program. When I talk about this program, I must be very careful because this is one program that involves two Executive Departments of government—the Department of Labor and the Department of Health, Education and Welfare. Most of the training in the Manpower Development Training program today is primarily in the schools of our country. In August we did not receive any money, but the schools took hold and moved quickly. And immediately before the end of the first year in 1962, the program was moving, and it has been moving since. We have been doing it for years (training & re-training) - so, when you think of the Manpower Development & Training

Program, most of the training today has been in the vocational schools and they have done an exceptionally good job.

"There is another agency involved - Health, Education and Welfare - they are primarily the Executive Department. When you come down on a state level, I am actually talking about the State Department of Public Instruction. On a local level, we are talking about the local vocational people on the education side; on the labor side, the Secretary of Labor, using the facility of the Federal and State Employment Service, delegated the responsibility of selection referral counseling and testing to the Employment Service.

"So, you have the State Employment Service and your local employment service doing the selecting and referral and determining the needs for the program and the local vocational school in terms developing the curriculum program to take care of those needs.

"The third delegation of the program was to the Bureau of Apprenticeship and Training which is the Bureau that I represent, and we are delegated the responsibility of the 'On-The-Job-Training Program.' The 'On-the-Job Training program is primarily a program of training in industries. Primarily, it was one of the programs that was slow getting started in fiscal 1963 - one of the reasons being, the Bureau has a very small staff, and second, we were going into a new program where the Bureau was actually handing out money, where the Bureau was passing on reimbursement to employer and to other people for work done in training. So, it was important that we move slow to develop good practice and procedure and develop procedure in such a way as to get the maximum use of the dollar in the program.

"Now, many people get the wrong conception of the 'On-the-Job Training Program.' They hear about large reimbursements being made to employer or union or to other types of groups that do the training. I think we shall clear up the air on some of this, primarily, what the Bureau says to our department is this, 'We have a number of marginal people who we are willing to accept and train - we are willing to pay reasonable training costs, but there is no attempt of the department or the Bureau to pick up the whole tab of cost of training in the program.'

"We are not allowed to subsidize on going programs. They have to be programs - new programs - that are expanding programs. We are not going to use any of the Manpower Development and Training Program to pick up the cost of previously operated programs.

"If there is any idea here - someone may ask me about the one million three hundred dollars we gave to Chrysler - I assure you they didn't make a profit on it, but we will get into that a little later. The 'On-the-Job Training Program' started a little slow in 1963 with approximately only 1500 training, but in 1964, the program really started moving. We had approximately 10,000 trainees.

"In 1965 we finished up the fiscal year with about 40,000 trainees. Congress in its hearing was quite impressed with the result that the Bureau was getting with the 'On-the-Job Training Program', and so, suggested the Secretary to increase the goal for the program. The goal for the Department this year is to attempt to develop, approve and put into training approximately 100,000 trainees at the cost of approximately fifty-seven million dollars which is the average cost of $570 per trainee.

"I would like to report to you that we are going forward and reaching our goal. I hope from this meeting the Ohio employers and unions realize that instead of recruiting out of the city and state that they consider using the vehicle of 'On-the-Job Training' and the 'Institutional Program' to take care of their needs, because I assure you that all the high I.Q. boys are all gone - they are not out there - so there is no use looking for them - they are all gone.

"I don't necessarily say you should lower your standards, but you should seriously consider some of these young people that have dropped out of programs - they do have the I.Q., they have the ability, all they need is the opportunity. Our goal for the 'On-the-Job Training Program' in Ohio is approximately 5,000 trainees for this fiscal year.

"The Manpower Development and Training Act is funded by the Secretary of Labor allegating all the money to the states, and for the first six months, this money remains in the states, and after six months, the states are given notice if they do not use their funds, they could be transferred to other states that are using it.

"I am not indicating anything, but I do hope that Ohio does not have to give up any money, because I am sure the need is great here. I know that some people feel that labor is not supporting the 'On-the-Job Training Program' as well as it should, however, I don't think that is necessarily so. We have a number of International Unions that sponsor programs. One of the first programs that we sponsored was up in South Dakota, where they were building a facility of some type and they had a large number of carpenters and millwrights that they needed and they developed a program where some carpenters were given some training and were able to qualify to do work on this site.

"The Operating Engineers was one of our first and stronger supporter. In the program the operating engineers developed a project out in California where they used the facility of Camp Roberts. This was a combination program where we trained over 300 operating engineers in heavy equipment operations and where they did some useful work for Camp Roberts. The marine cooks developed a cook's program, so the trainees even received their food by trainees who were training to be cooks. That was a very successful, exciting, and very expensive program. We like the operating engineer program. We feel that we will fund one or two more this very year.

"The bricklayer has come into the program by way of pre-apprenticeship where they develop pre-apprenticeship programs and using the facility of vocational schools move into 'On-the-Job'. So, there are a number of different types of programs.

"With the labor market tightening up, we will give a lot of emphasis to the 'On-the-Job Training Program', to the 'Hard Core' and to the minority groups. Last year approximately 75 per cent of the programs and trainees that we had approved, trained, and developed were primarily in **enter** occupation. Only about 15 or 17 per cent were in up-grading area and about 5 or 6 per cent in the apprenticeship and the pre-apprenticeship so you can see that we hope that with the changing skills, we will do more; however, we will find that we will run into a problem in developing programs for up-grading because primarily most of the 'On-the-Job' trainees are employees. When you mention an up-grading situation, we usually run into the

problem of people being presently employed bidding for jobs. We run into problems where industries have primarily been doing some training, and we have no intention of picking up the tab of training that they have previously been doing and so we have moved as well in the up-grading area as we expected to.

"The Bureau and the HEW anticipated greater movement possibly in the Up-grading Program and the Vocational Program more so than On-the-Job; however, we are not going to give up on them - we attempt to stretch programs to fit the needs.

"I thought you might like to know something of the 40,000 trainees we put into training last year. Primarily, most of them were in the semi-skilled occupation. They made up about 33 per cent. Thirty per cent or so was in the skilled - about 11 per cent was in the service trade - we hope to do more in the service trades. We expect growth in the service trades, however, it is an area that is hard to work with since it is an area that is not organized. It is an area where rates are low and the Department of Labor is especially interested in supporting and subsidizing projects in low wage areas; however, we do recognize that there is a limit sometimes to some of the applicants that we are working with - how far you can take them for the first time.

"We haven't done very much with the professional or technical area because we have a restriction primarily on professional areas so we probably never will do too much in that area.

"As a whole, we expect to reach our goal, and we will reach it if the industries of the United States and labor support us in this effort. I think that the fact that most of the trainees in 'On-the-Job Training Programs' are employees and have employed an employer relationship is a good indication.

"We did a study recently to see how we will make out in a cost of our program. We realize that we are reimbursing and we are especially interested in knowing how long it will take the average OJT trainee to pay back in the income tax the amount of money we are investing in him. It turned out that in some of the shorter occupations where trainees are receiving about 15 or 19 weeks of training, they will probably return the money to the government within a year. In the longer programs (52 weeks) it may take a little longer to do. Most of the reimbursements that we make to the employers are so small that generally the employers pay the trainees more wages than they receive in reinbursements from the government.

"We think that it is a good program, and it is a type of program where actually the trainee is doing something. He is working at the work site, and it makes for good training.

"We did a little study on our trainees and found that 47 per cent of them completed high school; 24 per cent was in the 11th grade; 7.1 per cent was around the 8th grade, and less than the 8th grade made up only 6.7 per cent; so you can see that we have done a little bit of cleaning. We have been taking the cream of the boys. We haven't been getting down deep enough to the 'hard core' minority group, and you can see why this year we will probably stretch our program primarily more to people than to industries. I thought you might like to know that 74 per cent of all the trainees in our programs are male and 25 per cent female. This may not mean

very much to you, but we have been critized in California because there was a larger number of females in the programs; but the fact is that we only have 25 per cent—so we feel that we are doing all right.

"You might want to know what kind of breakdown we have in the minority group participation. In the white group the percentage was 78.3—21.7 was minority groups—so we are running around 21 per cent. We feel that this per cent will probably be increased this year.

"Now as far as vocational programs, we have some programs in the 50 states.

"Now, for the question and answer period. We have a staff here, so if there is anything that we haven't gotten across to you, and if there are questions you don't care to ask in front of the group, we will make arrangements so you can meet with any of our boys who will be happy to assist you."

Question: by **Edward F. Pelteson,** Greater Cleveland Manpower Program, Cleveland, Ohio, "Is M.D.T. cooperating in any direct way with employers in developing an actual job before any training begins?"

Answer: by **Mr. Przelowski,** "This question should be directed to the Employment Service representative since the Employment Service is primarily responsible for determining the needs of the program. They determine if this should be an 'On-the-Job' or a 'Couple Project' or if it should be a straight 'Institutional' one—that is the way it is done.

"I hope that the employer is getting enough opportunity to participate in the program. If you are not, I assure you, you should have."

Question: by **G. T. Wood,** Manpower Advancement Program, Cleveland, Ohio. "What can be done on behalf of trainees under M.D.T. programs who have completed their training and there is no job opening for them? A survey has been made and shows there is a job shortage in that occupation by the State Employment Office?"

Ray Flory, Member, Ohio State Apprenticeship Council, Toledo Ohio, "I would like to make one statement in answer to that before I ask Hank Przelomski to answer.

"I was on the committee of the M.D.T. and a survey was sent out for a particular occupation in an area and it came back showing a hundred job openings. Supposedly, the jobs were there, but they wouldn't put anybody to work after they were trained."

Mr. Przelomski: "In answer to your question Mr. Wood, I assumed that you must be aware of some trainees who completed the program and were not placed. Well, in all fairness, when a survey is made, many times and in many cases at that particular moment there is a need and by the time the program is started and by the time the trainees are selected and referred, the picture may change. But let me say this, the placement figure on the 1964 institutional program (you have to watch on this because we have a ITP and a OJT program in the 'institutional program') was 75 per cent of the trainees who completed were employed.

"I assure you that it is not the desire or the intent of the Employment Service or the Department to just train people to fill up a classroom.

"As Ray mentioned to you, the first survey indicated that one hundred trainees were needed and by the time they really got down to it and said 'how many will you specifically take' the figure disappeared. I'll be very honest with you—some employers say 'Well, you know, I an not hiring anybody, but if things break right, I can use two or three.' Well, the person who is making the survey puts down two or three—maybe he writes down the larger number—three—sometimes the figure can be a little inflated. When you figure about 70 or 75 per cent are completing and entering jobs that is not a bad record."

Question: by unidentified person. "What is to be done with many of today's youth who are unskilled and who do not qualify for MDT courses?"

Answer: "Paul, that is a good question and the type of question I like to hear and present to this particular group because you are the people who have had years of experience in the field of training. After all apprenticeship is one of the oldest methods of training and has been around since time began.

"We feel there is going to have to be a better relationship with the local employment services, the industries, the schools, and the B.A.T. instructor programs, so people of the type that you are asking about, start into a basic educational program, then into a pre-vocational program, then maybe into 'On-the-Job' or 'Occupational Program.' But we are going to have to develop a number of different ways of doing it, because many of the applicants that we will have are the ones that we can't move immediately from the streets into an apprenticeship program or into some of the other programs.

"I think that the Secretary of Labor is making extra money available for the Bureau to encourage the Bureau to develop 'Couple' or 'Pre-job' vocational type school and work type jobs in this fiscal year because we feel that the applicant that we receive will probably have to have this training for they can go on the job."

Question: by **Charles Swyers,** Electricians, J.A.C., Toledo, Ohio, "Three years ago we had more trained people than work available, now it is just the opposite. Can you help business cycle become more stable? So, the apprentice training, can have a more stable program.

Answer: "When we have a lot of good, beautiful, strong looking American applicant kids walk into the office who will give their right arm to get into an apprenticeship program, we don't have a program. Now, we have the programs, but we don't have the people. I can assure you, if I knew how we could get the two cycles together, we would have it made. We have the jobs, but we don't have the applicants so now we have to develop our own applicants."

Question: by **Bill Roark,** Structural Clay Products Institute, Washington, D.C. "Is anything being done to speed up the long period of time it now takes to process OJT contracts?"

Answer: "There has been some criticism of the Division of 'On-the-Job Training', because of the amount of time it takes for us to approve a program. We try to be careful, but we don't want to be so careful that we jeopardize the program.

"I would say this, we have delegated the Regional Directors with the authority to approve projects under 50 thousand, but those projects that are reimbursed for more than 50 thousand will have to be sent to Washington. We hope that this will expedite approval.

"I might say something else. We had a large number of inquiries when the program was started. We thought we wouldn't bother with one or two trainees. We would just go for the big numbers, ten, twenty, one hundred, and two hundred trainees. We found, however, that there are a lot of small industries/businesses in this country that can't hire that number of trainees, so we have now developed a short form so that any small employer who wants only one or two trainees can now have a program for a minimum amount of time in getting it approved. We hope this will stimulate more interest in the program, and that it will get at many of the small businesses that we have been missing."

Question: by **Ronald Peters,** Supervisor, Vulcan Tool, Dayton, Ohio "What can be done with MDT apprentices that would be drafted before getting 1,000 hours on the job training? Do you feel that the Selective Service Department should work together with this problem with BAT? Will this be done?"

Answer: "Ronald, depending on how you say or ask that question. As you know, we do have an arrangement with Selective Service for the deferment of apprentices in skilled occupations and in occupations that are so needed in the national defense of our country. There are apprentice deferment forms—SS 171; however, in the regular Manpower Development and Training Programs that arrangement has not been made as of yet."

The next speaker was **Mr. Harry F. Davis,** Supervisor, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio who spoke on the topic "Education Departments' Apprenticeship Legislation."

"Education and training is probably one of the largest businesses that we have in the country today. During the fiscal year of 1966, which started July 1st of this year, there is expected to be some 8.6 billion dollars of federal funds, provided for education and training. Just two years ago we only received federal assistance at the rate of 4.5 billion dollars.

"I think that we must remember that when we talk of the billions of dollars spent on education and training and federal assistance, we must remember that for every billion dollars that are coming out of Washington, roughtly $3.00 is being spent by the local people on education and training. Of this 8.6 billion dollars there will be 3.3 of it that will pass directly through the hands of the Department of Health, Education and Welfare. Now, again I need to draw a comparison just two years ago there were only $645,000,000 passing the U. S. Office of Education's hands in federal assistance education. This has been a tremendous increase from six hundred forty-five million to 3.3 billion. I think that this emphasizes that education and training is our largest industry.

"One thing that disturbs me, however, with all the funds coming out of Washington, there are 18 pieces of legislation that have to do with education and training. There are some forty-two departments,

agencies, and bureaus of the government on the national level, administering these programs. Now, this only points out one thing, that cooperation is essential if we are to succeed in the training of our people. Without cooperation the job cannot be done. When you have forty-two departments, bureaus, and agencies on the federal level administering the training program you just cannot do the job if you do not have cooperation.

"The major emphasis for federal assistance for education is conducted in the area of training which encourages people to go out in this world and work. It is also interesting to note that almost all the legislation having to do with education and particularly training was formulated as a result of crisis. I can certainly say we are in a crisis today.

This crisis was actually started sometime back in the mid-eighteen hundreds when it was realized that our population was growing. Turmoil was being created in our industrial force because of the new advances coming into the fields. So, really as a result of this industrial revolution that we started into about that time, the first Federal aid program to education was initiated and this came about in the ~~Moral~~ L. L. MORRILL Act of 1862. The Federal government was concerned with educational institutions that would give training primarily for agriculture and engineering. And as you may know, these institutions are normally known as the land grant colleges of our nation which have grown into universities which have established agricultural schools and engineering schools. I point this out because this was the Federal government's first venture in the Federal aid for education. Although the aid came in terms of actual land, it was an assistance to local communities. Then back about 1910 there was a commission assigned to the president, as there has been recently, to study the problem of meeting the manpower shortages caused by (the same thing we are talking about today) automation. It was in a little different form, because progress was going along at a pretty rapid pace. Then the turmoil in Europe came about and this invited the effort of congress just as it did today.

"To look further and deeper into the problem of meeting the manpower training, congress looked at the turmoil in Europe, and decided that Germany was getting ahead in production—so, they decided to do something about it. As a result, the first actual funding legislation for vocational education was passed. As many of you know this is referred to as the Smith-Hughes Act, which is really the father of all Vocational Acts that provides training for entering into an occupation. Since the passing of the Smith-Hughes Act in 1917 and up to this date this country has been passing legislation dealing with the employment of people. Up to 1917 and up to the World War II, which was another crisis, a numberal of Acts were passed. They were substituted and re-written to meet the demands of manpower.

"If you study some of the vocational laws you will see that the early Act was still based on the need for agricultural production in our country. I say that agricultural is changing in this country. There are still great demands for agricultural occupations but not on farm production as it has been in the past.

"In 1940 Congress began making appropriations to train Defense Production Workers. They were renamed the War Production Workers and a war production training program was initiated again caused by

a crisis. Under this program more than eleven million were given specialized training in occupations necessary for the war effort.

"Then in 1946 congress acted again with the passage of the George-Bardon Act, authorizing an increase in the annual appropriation from fourteen million to twenty-nine million dollars annually. This provided for the training of people more realistically in line with the need of industries and not specifically based on agricultural training. The G. I. Bill which followed after the passing of this Act has been acclaimed to be the best dollar investment in education and training that there ever was.

"In 1958 the George-Bardon Act was amended to include a title of another act that was actually initiated. This was a National Defense Educational Act. In 1958 this Act was brought on by a crisis and that crisis was the launching of the Spudnix. So included in the Vocational Act the George Bardon Act was really the title VIII of the National Defense Education Act, which concentrates its effort in the training of technicians. The National Defense Educational Act concentrated its efforts primarily for the need of science engineers and technicians.

"Then we plotted on for a few years and we realized that this concentrated effort in science and engineering did not solve the ills of manpower. If everybody was going to be a scientist or everybody was going to be an engineer, who in the world would make the machines, build the launching pads for the missiles, and build the buildings that these brains had to live in with there computers. They realized that they forgot something along the way, that education still needs progress along with the classman.

"So, to solve this problem, congress authorized some 97 million dollars the first year for the Manpower Development and Training Act. This Act provided and concentrated in the areas of training and retraining for employment for those who were unskilled and needed to be up-graded.

"Through a committee that was appointed by the late President Kennedy, the Vocational Act of 1963 was initiated, and this Act authorized a permanent program of Federal assistance for vocational education which amounted to 108.5 million dollars last year. It will be 177.5 million dollars in the fiscal year that we are in now and 225 million dollars every year there on if we do the job, and I am confident that we will do the job.

"Ohio actually will receive out of this amount approximately five per cent. Now this is a pretty good average for Ohio when you figure there are fifty state. So, Ohio is getting a pretty good share of it. Last year Ohio received approximately 5.2 million dollars to expand vocational educational. Actually, this meant an expenditure of over ten million dollars.

Remember to use the federal dollar you must match the federal dollar locally. This year we will go to somewhere around 7.4 million dollars to expand vocational education and the following year some nine million dollars.

"I have related the brief history of education and training and legislation that had to do particularly with vocational education merely to point out the available source of funds to do the job. It is

from these Acts that money is provided for instruction for pre-employment training and instruction for apprenticeship training.

"Last year we spent some $148,000 for apprenticeship training in the State of Ohio through the Vocational Act. Now, this is not a very high amount when we talk in the number of dollars that we have available to do the job.

"Last year we gave related instruction for apprentices employed in industries to approximately 67,000 people—in roughly twenty occupations. This was an increase over the previous year. In fact Ohio has shown an increase in two years in apprenticeship training which is encouraging. This was brought about by the effort of the Federal government which brought about the focus of apprenticeship training from local and state agencies but the focus isn't enough yet. It has to be focused a little wider so as to initiate the apprenticeship program and to use effectively the funds available. We need group action, and I think every speaker that was up here today indicated group action in education and training because the educational institutions cannot do the job alone.

"We need the action of the employer and the employees and we need the action of the educational institution on the local community, and we need the action of labor because sound education is always based on need, and it is up to the parties involved that need it and want it to initiate it.

"Apprenticeship training in Ohio can grow if we make it grow.

"Now let's turn for a moment to what we can do with journeymen under the Vocational Act. You know, and I know that your job and my job is changing and changing rapidly. Where else can we get related instruction to supplement the knowledge we need in our changing job. This can be done through public education, but only if the need is expressed. You people have long been involved in training and I think we need to get a cooperative effort if we are going to see apprenticeship grow. Sure we have problems. One of our problems is the selection of people. True, we have the problem of our changing job, but the job can be done.

"The signs are encouraging gentlemen. Apprenticeship will grow —apprenticeship training is on the increase—it is not as great as it should be at this moment—but the awareness is there. I think it is up to us as a cooperative effort to initiate it."

Question: "The 1960 census showed over 70% of high school youth interested in vocational training, yet over 80% of Ohio high schools are college prep schools. Why can't we have more vocational education? And, how can the Department of Labor help do this?"

Answer: "Legislation has already been adopted in the State of Ohio which says that vocational education will now be offered in all school systems through-out the state. Now, there is still some question in the minds of people as to how we will intiate this. This is going to be a difficult job because remember this, the cost of vocational education is high but action has already been taken by people in Ohio by their saying that vocational education will be given in the high school as part of the curriculum. And they go even further to say before a student can drop out of high school (manatory law) he must go through a vocational program of some type to make him employable before he can obtain a working certificate. So, we are retooling our educational system in Ohio, and I think this is evident in legislation."

Question: by **Art Schrader:** "What funds are available for equipment and buildings for apprentice training? Journeymen training places are added burdens on local school boards. Will the State subsidize these programs 100%?"

Answer: "I think it really all boils down to the assistance that is being given now from primarily the Vocational Act of 1963. This is the Act that actually designates construction and equipment for vocational facilities. It still boils down to initiating a total vocational education program in the State of Ohio and limited funds to do it with.

"The State Board of Education has more or less designated the need to be on the high school level. Now this doesn't eliminate, in my opinion, the possibility of funding for apprenticeship, but funding for apprenticeship directly is coming through reimbursement for instruction; and to my knowledge I don't know of any funding for equipment for apprenticeship programs that can be used in existing vocational programs. This will become quite costly. I think we are getting dual use of the equipment".

Mr. Frank Evans, International Executive Board Member, Allied Industrial Workers Union, Cleveland, Ohio, remarked "I really didn't come here to talk I came here to present a program of slides but in order to present the program I must have something to say.

"I am the representative for organized labor, but I am also Vice-President of the Negro American Labor Council, of which A. Phillip Randolph is the President. To familiarize you with the organization as such, the organization is not a labor one within the meaning of the Act. It is an organization which was formed back in 1960 in Detroit, Michigan. The purpose of the organization was to attempt to break down racial discrimination within labor industries and government. Today, the organization is an accepted one by the top leadership in organized labor; namely, by President George Meany of the A.F.L.—C.I.O.

"In a meeting with Assistant Secretary of Labor, Jack Henning, in Washington, D. C., he asked me and the organization to develop a program that would be in step in keeping with Title VII of the Equal Employment Opportunity Act. He said that by helping the government to get this training program on the road.

"We are not here to criticize any program as such but we are here to present to you a program in our opinion that can be accepted by organized labor. It is hard for labor to accept programs that deal with the training of people who are out of work or the unemployable person. But, we feel that we do have a program—a program that has been accepted by all of the Departments in Washington; to include, the Department of Labor, the B.A.T.; the H.E.W. and its Research Department."

Mr. Evans then presented the slides to the audience while **Dr. Joseph S. Kopas,** President, Human Engineering Institute, Cleveland, Ohio, narrated the projections.

Mr. Ray Flory, Chairman for the General Meeting, closed the session at 5 P.M.

BARBERING TRADE

Wednesday **October 27**

CHAIRMAN

Frank J. Blazina, Cleveland, Ohio

TOPICS

National and State Barbers Apprenticeship Standards

Organization and Operation In Metropolitan Areas; Bowling Green, Canton, Cincinnati, Columbus and Dayton

PANEL MEMBERS

John E. Johnson, Akron, Ohio
Charles J. Moscarino, Cleveland, Ohio
Robert B. Walters, Bowling Green, Ohio
William W. Fisher, Cincinnati, Ohio
Joseph D. Scarberry, Springfield, Ohio

CONSULTANTS

Walter E. Ink, Secretary, State Board of Barber Examiners, Columbus, Ohio

Ralph C. Neal, Apprenticeship Consultant, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio

Oscar R. Poole, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio

SECRETARY

Charles J. Moscarino, Cleveland, Ohio

BARBERING TRADE

Mr. Joseph Scarberry, Secretary of Ohio Barbers Association, Springfield, Ohio, opened the meeting. Silent reverence was held for Clarence Wright, President of Ohio State Barbers Association. Mr. Scarberry then made a few remarks on apprenticeship; he introduced all the members of the panel, who were also members of the Barbers State Apprenticeship Committee and then turned the meeting over to **Mr. John E. Johnson,** Chairman of the State Apprenticeship Committee, Akron, Ohio. Chairman Johnson spoke briefly on apprenticeship, the need for more participation and also the benefits.

The Chairman then introduced the first speaker, **Mr. Ralph Neal,** Apprenticeship Consultant, Trade & Industrial Education Service, Ohio Department of Education, Columbus, Ohio, who has been working very closely with the barbers on their related instruction program. Mr. Neal thanked Mr. Johnson and said the Barbers Union, State Apprenticeship Committee and local apprenticeship committees must keep in mind that the apprentice program for Ohio's Barbers is the responsibility of the state and local apprenticeship committees, not the State Barbers Board or the International Union,

He further stated that more direction must be given to local apprenticeship committees and unions interested in apprenticeship by the State Joint Apprenticeship committee.

Mr. Neal recommended the following:

1. The Barber Union and Barber Board of Examiners acquire more realistic and useful statistics.
2. The State Joint Apprenticeship Committee must be the prime group to initiate and help local committees to accept the apprenticeship program.
3. The State Joint Apprenticeship Committee should bring in the Barber Board of Examiners and operators of private schools to help set up the guidelines for apprenticeship training. This will give all factions an opportunity to participate in the program.

Mr. Neal stated that the International Union had asked him to serve on an education committee and after a week at union headquarters in Indianapolis, he felt like he could now pass the examination to be a barber. He said his experience in Indianapolis was a pleasant one. A great deal was accomplished in school accreditation, curriculum, physical facilities and apprenticeship. Mr. Neal's opinion was that the union president was a real salesman. He was honored and enjoyed working on the committee.

Here are some of his conclusions during the meetings:

There will be three sources of training for the journeyman barbers:

a. On-the-job training in accredited schools-either private or vocational.

b. Uugrading programs in conjunction with local school boards

and State Departments of Education, Trade & Industrial services.

c. Private schools with their own programs financed by fees.

The on-the-job training program is being sponsored by the International Union. This is being financed by a grant of $257,000. Do not confuse this OJT program with the State local apprenticeship programs. This is an upgrading program for barbers. The philosophy back of the International OJT program is to train the journeyman barbers to do more than haircutting and he (the journeyman) will give other services which will open a place for an apprentice in his shop.

The upgrading programs in conjunction with local boards of Education and Vocational Education is the program promoted by your State Joint Apprenticeship Committee and is funded by the Department of Education and the apprentice, school or apprenticeship committee.

A few private schools are starting a program of upgrading, available to journeymen barbers and funded by a fee charged by the school.

The training of apprentices with OJT federal funds cannot be done at this time. However, it is hoped that funds wil be available later for the apprenticeship program.

It is the plan of your International Union to prepare and make available educational materials for apprenticeship committees, both state and local. President DePola also stated that the International is working successfully with those states that have no private schools but operate barber training through state vocational schools. Wisconsin and Connecticut are examples of states operating in this manner and cooperation is excellent.

In conclusion, he stated that it had been a real experience to work with the State Apprenticeship Committee this past year and he looked forward to continued progress in the year ahead.

Mr. Johnson introduced the next speaker, **Mr. Frank Blazina,** 10th Vice President of the International Union, Cleveland, Ohio, and also a member of the State Apprenticeship Committee. Mr. Blazina thanked Mr. Johnson and said the barbers now have a national apprenticeship program and he would like to briefly review the National Standards. The barbers if they are to progress must take advantage of this program. All the locals through the country have been notified of these standards and though they have been accepted by the U.S. Department of Labor, B.A.T., some of the states may have to vary their program. Changes will probably be made from time to time since different state laws may conflict with the program that has been set up, so the standards must be flexible. After reviewing the standards, Mr. Blazina stated that a National Barber's Apprenticeship Committee had been appointed and it was composed of three representatives from the employer groups and three representatives from the Journeyman Barbers International Union.

This committee met in Indianapolis on October 19, 1965, at the International headquarters with the barber representatives from all over the country, together with a representative from Washington, D.C., Jack Currie, U.S. Department of Labor, B.A.T. Mr. Blazina went on to explain the purpose of the Committee, stating that its

purpose was to get the best of all state programs into a working force for the International Union program for proper training of apprenticeship students. The first order of business by the committee was to approve a program of apprenticeship for the International. The committee carefully studied the National program section by section. Each and every section was approved with a few exceptions where changes had to be made.

Accreditation of schools and accreditation standards were gone over by Mr. Blazina along with problems confronting the schools and the current OJT program now put into action by the International Union. Mr. Blazina was strongly in favor of the advanced training program and he saw nothing wrong in giving apprentices this valuable training. Proprietors must be sold on going along with this program. "We must all put our shoulders to the wheel and go forward." He urged all delgates to get behind the program. "This is a must. This is it."

The next speaker was **Mr. Oscar Poole,** Representative, Bureau of Apprenticeship and training, U.S. Department of Labor, Cleveland, Ohio, who spoke on the OJT program sponsored by the B.A.T., U.S. Dept. of Labor and International Barbers Union. He said the program was set up to upgrade registered barbers into new skills and new services so that it would open new opportunities for the barber apprentices and bring in new entrants. To get the program rolling, 30 demonstrators from 24 key cities in the United States were trained at the International Barbers Union School at no cost to the government for facilities and supplies. The course to train demonstrators lasted 2 weeks and these demonstrators were to carry on upgrading programs in their home areas upon completion. Mr. Charles J. Moscarino, State Apprenticeship Secretary, was selected by the International Union as a demonstrtator.

Classes of not more than 15 would be set up in the demonstrator's home city or nearby communities and could be held in the evening for registered barbers who wished to participate. The course would last 12 weeks, 3 hours per week, making a total of 36 hours. This program would be open to all registered barbers at no cost to them for the course. The training would consist of razor cutting, hair pieces, hair coloring, hairtreating, shear blending and salesmanship. The cost of this program to the U.S. Government would be $257,824. Ohio had been alloted $10,482 to train 125 registered barbers. A program will begin shortly in Cleveland. Two classes are ready now but final approval must be received from various government agencies involved.

Mr. Poole then thanked Mr. Neal, Mr. Blazina, Mr. Moscarino and others for their willingness to get the apprenticeship programs rolling.

He then spoke on the current set-up, the new standards, accreditation of schools and pointed out that there was room for improvement in barbering but it must be done by the barbers themselves.

The State Apprenticeship Committee would have more authority now and local committees should get started with their programs. There were men available from the Bureau of Apprenticeship and Training to give help wherever needed. He also stated the training for these new services to upgrade the barber was necessery to show

the public and the legislature that there was more to barbering than cutting hair.

Although the OJT program was designed for registered barbers only, it should be included in related training also to create a desire by the apprentice and be good for the barber business as a whole.

The next speaker was **Mr. Charles J. Moscarino,** Secretary of Barbers's Local 129 and Secretary of the State Apprenticeship Committee, Cleveland, Ohio.

Mr. Moscarino thanked the delegates who attended the sectional meeting because it meant that there was an interest and desire from their areas to raise the barbers standards and elevate the barber business.

For the first time in years our barbers were doing something constructive along these lines, mainly, setting up National Apprenticeship Standards and setting up an OJT program for registered barber under B.A.T., U.S. Dept. of Labor and the International Union of Journeyman Barbers. The barbers had finally broken through that imaginary shell that was surrounding them and they themselves had come to realize that there was more to barbering than cutting hair and to exist they would have to learn more services because the patronizing public was demanding it. He stated we have been a one-service business too long and it was time we make a move. "There are new techniques and skills that are sweeping the barbering industry from coast to coast and our International wants us to learn these new techniques because by acquiring these new methods, you not only will gain the respect of your customers but of your fellow barbers themselves. Only through education can we upgrade the barbers. We cannot rely on price increases to exist. We must learn new services to better our income.

"Years ago, barbers sold more services than today. They not only cut hair, they shaved, gave massages and shampoos. Today, we are in a hurry and we have forgotten that our customers want more services and they are willing to pay the price of these services. Already it has been proven in various parts of the country. We cannot sit back and wait because we will be left behind. The barber is his own worst enemy. He complains that business is bad but does nothing about it. Who has a greater opportunity to sell than the barber. Once the man sits in the barber chair, the barber has a captive audience. There are many salesman who would love to have the opportunity to just talk to a prospective customer for a few minutes to sell his products but the barber has his customer in the chair at least 15 minutes and he talks about everthing but the services he can give and he lets hundreds of dollars slip through his hands every day.

"Did you know that the hairgrooming business is the 6th ranking business in the United States? What part do you think the barbers play in it? Very, very little. The women and beauticians account for 85% of this multi-billion dollar business. Can you imagine that?

"Don't you think its about time we reached out for our share of this. I think it is time now.

"There is money to be made in barbering and you can do it if you learn these new skills—mainly—hairstyling, hair coloring, wig measuring, razor cutting and hair straightening.

"The opportunity to learn is available, but it is up to you."

Mr. Moscarino then pointed out how barbers have hurt their shampooing services by using the incline method instead of the recline method which is so much superior and comfortable to the patron. He also concurred with the delegates that a new curriculum would be needed to encourage more apprentices to attend related instruction.

BRICKLAYING AND STONE MASONS TRADES

Wednesday October 27

CO-CHAIRMEN

Richard Chaney, Business Representative, Bricklayers Local Union No. 22, Dayton, Ohio

William Keitler, Representative, Allied Masonary Company, Xenia, Ohio

PANEL MEMBERS

BRICKLAYING AND STONE MASONS TRADES

First and Second Sessions

The conferees were welcomed to the 15th Ohio State Apprenticeship Conference by **Thomas Davis**, Secretary of the Ohio Conference of Bricklayers; he outlined the program for the morning session, and introduced the guests and panel members. Mr. Davis then introduced the Chairman of the morning session, **Mr. Richard Chaney** Business Representative of Bricklayers Local No. 22.

Mr. Chaney introduced the afternoon Chairman, **Mr. William Keitler,** and then asked everyone to introduce themselves and their affiliation. The Chairman made some remarks of welcome and commented on the number of management representative that turned out this year.

Chairman Chaney called on **Mr. Edgar Baker,** 7th Vice President of the BM&PIU to make a few remarks.

Mr. Baker was very brief in his remarks, but did comment on the importance of training an adequate number of apprentices. He also pointed out how the Manpower Training & Development Act of 1962 could be utilized by the Bricklayers JAC's in Ohio. He referred to a program now operating in Ironton, Ohio. Mr. Baker also congratulated the State Joint Apprenticeship Committee on their performance since reactivation. He also stated his appreciation as an I.U. officer at the attendance of both management and labor at this conference.

The next speaker was **Thomas Davis.** Mr. Davis explained the revised State Standards, why the standards were revised, the changes that were made, etc. He also explained the Statewide Suggested Selection Procedures. Mr. Davis reminded the conferees that it is necessary for J.A.C.'s to adopt or devise selection procedures of their own because of Federal Regulation, Title 29, CFR Part 30.

He pointed out that candidates for apprenticeship must be selected based on qualifications only. He then explained the "Evaluation Sheet." This must be filled out for each applicant, selection must be based on the person attaining the highest number of points and progress downward until the number of apprentices being indentured is met. The balance of applicants remain on availability list until another group of apprentices are selected. These "Evaluation Forms" and other pertinent information must be retained for two (2) years. Mr. Davis reminded all conferees that it is necessary to re-register all programs with the Ohio State Apprenticeship Council.

Mr. Robert Dalton, Chairman of the State J.A.C. was introduced as the following speaker, and he again covered the Standards and Selection Procedures. Mr. Dalton spoke about testing of candidates for apprenticeship, the personal interviews, and the various methods of obtaining information from candidates during the interview.

He compared the procedures with others he has had experience with and explained the difference in the apprentices selected in the

prescribed manner. There then was a question and answer period from the floor which was interesting and informative. Summation of these questions and answers:

The "suggested selection procedures" have been accepted by Ohio State Apprenticeship Council, Local JAC's can make changes in standards as long as they are not lowering any standard prescribed in the State Standards, i.e. (raise or lower the age maximum, increase the total hours of related instructions). Indenture agreements are sent to the local Bureau of Apprenticeship & Training Representative not to the Secretary of Bricklayers Conference.

Chairman Chaney introduced **James Platt** of Structural Clay Products, Region IV, **Martin Graham,** Secretary, Ohio State Building & Construction Trades, and **Joseph Boquette,** Business Representative, Local #7, Michigan. Mr. Boquette was asked to speak, he compared the attendance at this conference with the last conference in Michigan; he also stated their conference was the following week. He discussed the apprenticeship programs in Michigan, also on all weather construction conference, and masonry promotion programs. He explained how he thought they all tied together.

He also mentioned that in Michigan there was some shortages of Bricklayers, but there is no alarm. He stated the related classes are filled to capacity where they exist. He commented that proper selection is becoming more important because fewer sons of bricklayers are coming into the trade.

Mr. Platt was the next to make some remarks: He said that Brick load bearing construction is rapidly growing, but he did predict that a lack of mechanics will hold back a promising growth of further expansion. He felt that young people are not coming into the trade because they are not knowledgeable of the opportunities available to them. He also stated that if promotion of year around work is successful this will aid opportunity for apprentices.

A question was asked; "How about the high bond mortar program?" The answer was that because of the requirements of pure water, etc., makes this unsuitable for open market use, also little follow up by tradesmen has not helped the program.

Another question: "How do you get new people into the apprentice program? i.e. (Recruit boys and reluctant contractors.)

Suggested Solution: Utilize the Employment Service, Local schools, relatives, organizations, etc., make a recruitment drive. Then indenture young men to the local J.A.C. and assign to a contractor. Move boy when required and don't expect same contractors to start all the apprentices.

A discussion about ratios started up and it was stated that Ohio is short 400 to 500 bricklayers, and that each local J.A.C. should try and determine its needs 5 to 10 years from now and then proceed to develop men to meet that anticipated need. It was further stated that each area should have a stabilized program and assume a given supply of journeymen.

Mr. **Martin Graham** was the next speaker, and he confirmed the suggestion to indenture boys to the J.A.C. He stated the work will come, hence the boys must be recruited. He further stated that retirement and deaths are taking its toll of journeyman bricklayers. The

advantage of indentureship to the J.A.C. is greater diversity of experience for the apprentice, he would complete his apprenticeship not as a specialist but as a journeyman with well rounded experience.

Mr. Graham also spoke on the masonry industries responsibility to lobby for more brick construction and less curtain wall construction, pre-stressed concrete construction in public work.

The conferees then got into a great discussion about the substitute materials, why they are used, the lack of bricklayers, buildings planned for brick, shortage of mechanics changed them to pre-cast material.

Meeting adjourned at 12:10 P.M.

* * *

The afternoon session was opened by **Daniel T. McCarthy,** Bureau of Apprenticeship & Training Representative, Cleveland, Ohio. Mr. McCarthy stressed the importance of signing the roster sheets being sent around the room, adding that this was the method used for mailing the minutes of the sessions. He also expressed his thanks to **Mr. Davis, Mr. Dalton** and the **Dayton Joint Apprenticeship Committee** for their cooperation in preparing the program for this conference.

He stated he appreciated the fine turnout of management representatives, labor representatives and other interested persons attending the conference. Mr. McCarthy then introduced the Chairman for the afternoon sessions, **Mr. William Keitler**, Contractor and Joint Apprenticeship Committee member in Dayton, Ohio.

Mr. Keitler made some opening remarks then introduced **Mr. George A. Miller,** Executive Secretary, Mason Contractors Association of America. Mr. Miller discussed the pre-apprenticeship programs being conducted around the country, he mentioned they have been an aid to the industry, he remarked that the contractors were more receptive to training an apprentice because they arrive on a job site somewhat productive.

Mr. Miller also talked about the financing of apprenticeship programs. He warned the conferees to be sure that their plans were approved by the Internal Revenue; he gave some examples of different training plans, but also suggested the best method was "so much per hour" contribution was the most practical because all contractors paid even though they were not training an apprentice.

He stated that the National Apprenticeship Committee for the Masonry Industry has received approval of the Revised National Standards and they should be available shortly. He discussed "Course Material" such as the Structural Clay Products Manual and others that can be found in the directory published by the Mason Contractors Association of America. He said that films are also available and that they are useful for related instruction or career days in schools.

Mr. Miller also brought out the importance of "Foremanship Training"; he stated this should be part of the activity of the J.A.C., contractor can be a big help to this type of program because they recognized foreman material. He said that all training programs must be sold to Contractors and Business Representatives, when their Psychological Attitude is properly shaped they are more receptive to all types of training.

Mr. Miller suggested to the conferees especially to the J.A.C. members that they should review their responsibilities as members of Joint Committee, practice them and by using common sense your programs shall be strong and continue to grow.

Mr. Keitler thanked Mr. Miller who then excused himself because of transportation schedules.

The next speaker was **Mr. William Roark,** Structural Clay Products, Washington, D. C. Mr. Roark started by saying "Let us look at our Industry." He stated that at present the Masonry Industry was healthy, there is a renewed interest in the use of brick. The industry is making a startling comeback after the invading forces of "Thin Wall Construction and Pre-Cast Paneling." Statistics show the need for doubling the amount of buildings in the next decade.

The reason for the comeback in our industry is because of "Improved Products and Promotion of Product by Labor and Management." Mr. Roark sounded an alarm because the inroads that have been made to recoup are now endangered because of Manpower Shortages. Most Architects when designing a building, have two sets of plans, masonry and others. If manpower is not available in the area of his choice he goes to his alternate plan. So, it behooves the Masonry Industry to be sure the Manpower is available.

Mr. Roark suggested and stressed the use of pre-apprenticeship classes in Vocational Schools, make use of the Manpower Development & Training Act of 1962. He said this has been used very successfully in Connecticut, North Carolina, South Carolina, Georgia, Kansas City and Charleston, West Virginia.

He went on to state that the MDTA was available to anyone and that if apprentices were not trained by the J.A.C., someone else may end up training mechanics for us. He further stated that a program under MDTA would be and should be utilized by the J.A.C.'s. Mr. Roark stated there were forty-four (44) groups within the realm of government in the training field, and that he was sure that with these funds available, effective use of government funds would meet the complaints noted concerning the lack of manpower.

Mr. Roark mentioned the State J.A.C. in Ohio was preparing a proposal for MDTA funds and asked Mr. McCarthy to highlight the proposal. Mr. McCarthy stated the reason for the proposal by the J.A.C., in actual count the ratio of apprentices in Ohio is 1 to 100 journeymen. The average age is approximately 52 years of age. This proposal should provide funds to train adequate apprentices in Ohio.

The proposal provides for one (1) Project Director, three (3) Coordinator Instructors for a period of one (1) year. Their purpose is to stimulate interest with contractors to employ apprentices. They will work with Local J.A.C.'s. They will recruit the applicants. The Coordinator will conduct (6) week pre-apprenticeship programs and provide eighteen (18) hours of on-the-job training for each apprentice. All apprentices would be indentured and registered as they are now. The proposal provides for 140 apprentices in the first year and 100 in the second year, if the first year is successful.

At this point a general discussion took place, many questions were asked and answered. The body then recommended that the State J.A.C. continue to pursue funds from the Manpower Development & Training Act.

Mr. Keitler introduced **Mr. William Webb,** Regional Director, Bureau of Apprenticeship & Training, Region VI. Mr. Webb explained the problem the J.A.C.'s have encountered with Ohio Department of Health because apprentices are not registered properly.

Mr. Frank Oliverio made these comments: To get into a high school to recruit applicants - see the Guidance Counsellor. To get Pre-Vocational programs into schools, members of this group could be influential in helping to choose the desired programs.

Meeting was adjourned at 4:45 P.M.

CARPENTRY AND WOODWORKING TRADES

Wednesday **October 27**

CHAIRMEN

David Nahra, Contractor, Akron, Ohio

D. E. Bowman, Business Agent, Summit, Medina, Portage District Council of Carpenters, Akron, Ohio

SPEAKERS

Fred Weber, Executive Director, Vocational Education, Akron, Ohio

W. S. Coulter, Public Information, Columbus, Ohio

Harry F. Davis, Supervisor, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio

Leo Gable, General Representative, International Brotherhood of Carpenters and Joiners of America, Washington, D. C.

SECRETARY

A. E. Yutzy, Secretary-Treasurer of the Maumee Valley District Council of Carpenters, Toledo, Ohio

CARPENTRY AND WOODWORKING TRADES

(First and Second Sessions)

Mr. David Nahra, Acting Chairman introduced the first speaker, **Mr. Fred Weber,** Executive Director of Vocational Education, Akron, Ohio. He spoke as follows:

"Let's understand first that I do not come before you as an expert on apprenticeship training. Rather, I'm a school administrator in a big city system with one of my major responsibilities being Vocational Education—along with Interscholastic Athletics, Physical Education, Health Education, Driver Training, Industrial Arts, Home Economics, Distributive Education, Practical Nursing, and special assignments as the occasion demands and the boss decrees.

"For a few moments, you will be listening to views of one whose background is academic—or was until a half dozen years ago. In recent years, I've learned a lot in the area of training, and I feel that Apprenticeship is one of the most interesting and among the very important. Having attended these conferences a number of times, maintaining silence, and listening, now hear this.

"Prior to an assignment in Vocational Education, my conception of the status of Apprenticeship training was pretty vague—a period of semi-servitude in which a young man could work and learn for an indefinite period of time, if he had a father, or perhaps an uncle, who would take him on, and then he could join the ranks of the 'Drunken Plumbers', or some other, and ply a trade.

"I had some hearsay information about a pretty fair industrial apprenticeship program in one of our factories at home. The impression was that this was practically unattainable and you had 'to know some one', to get in, thus, we point up problem No. 1 — not enough people know about Apprenticeship Training—especially the young men who are the likely candidates. School principals and counselors are not too well informed; but we've found that when they are, they become enthusiastic.

"This is a good place to point out to you that educators when informed look upon apprenticeship training as one of the finest and most sensible approaches to education. To combine the talents of contractors, labor, and the school, into joint apprenticeship committees in which the needs are made clear, the training planned, the curriculum built, and proper materials and facilities are identified, is to insure adequate training. Our Board of Education is enthusiastic about it.

"The Apprentice Program of Related Instruction in our community is conducted by the Adult Vocational School along with Pre-Employment Training and Trade Extension. **Mr. Jesse Gerber** is in charge of this school under the direction of **George Wetzel** who is Director of Trade and Industrial Education. Both are involved in the various J.A.C.'s. Both are here if you have questions or discussion when I am through.

"Here are some observations based on observations of our local program which currently enrolls nearly 600 apprentices and 40 instructors in seven building trades (Bricklayer, Carpenter, Cement Mason, Electrician, Sheet Metal, Painter and Plumber) and in pattern making, machine shop, and industrial programs at Chrysler Motor and Firestone Tire and Rubber. You will detect problems together with accomplishments.
Six observations:

-1- There is the occasional personality problem, but the best of relationships exist between the school, industry, and labor. J.A.C. members of all three give unlimited time and effort to the task. Some are better than others. I would suggest here that regularity of meetings is a requisite for continuity, progress, keeping up to date, and looking to the future.

-2- Public schools need to go all out in providing facilities. Ours do - within the limits big cities find themselves faced with. Recently, our plumbers needed a laboratory facility. We found space under the grandstand which used to be part of the county fair grounds, next to our auto shop.

The Board spent a tidy sum in plumbing and wiring, contractors donated the equipment, and labor did some of the work. We're in business. Good facility. The training time has been increased by 50% to get done the job all three felt needed to be done with the boys. In other programs, suppliers furnish the materials we need, copiously and gladly.

-3- The foregoing indicates the need for a brief mention of that old bugaboo - finance. We have had some differences over the matter of tuition. We keep the charge to trainees at a minimum, but we feel that a tuition charge adds meaning. Boards of Education are constantly pressed for money. The pay scale is not always adequate to get the calibre of instructors needed. We combat this in ways familiar to most of you, but the gratifying thing in this respect is that a quality program will attract at least **some** instructors who place money **second**, love of job and value of program **first.** We point with pride to college graduates and industrial experts sprinkled through our apprenticeship instruction staff.

-4- I have observed steady progress in recent years with three problems common to all of you.

(1) Selection procedures - requiring candidates to be high school graduates or the equivalent; working in cooperation with employment service, testing and studying interview procedures can reduce mortality from as high as 50% to as low as 5% over a 4 or 5 year period. We have experienced this. A good test to apply is whether a boy is just looking for 'A Job' or can he see he needs and wants **training.**

(2) Curriculum—here is an area which demands that J.A.C.'s meet regularly plus being on call on occasions. As mentioned before, in one we have increased training time by 50% just because it is 1965 and 1970 is pretty soon.

(3) Records - the approach of the teacher to student in the classroom, augmented by the employer-employee relationship on the job, and the role and responsibility of the worker to his labor organization—when these three are coordinated fully, you have a sure-fire

success formula. In working this out, attendance records, grades, and students-school policies are invaluable.

-5- Another important observation. Give stature and status to your training. Recognize achievement through graduation ceremonies, wine and dine the graduates, make awards for perfect attendance, high academic standing, etc. Make a ritual of the presentation of local, state, and national certificates. I have seen the positive effects of these things. In my short half dozen years, I have seen, just by **looking, knowing** very few graduates personally—that the caliber of apprentices becoming journeymen has improved perceptibly and steadily. You can look at graduates and see without question, good material for future instructors (we have them) and men important to the industrial system as leaders.

-6- My final observation is this—the steady attention by J.A.C.'s to some of the things mentioned can and will result in an ever-increasing caliber of product. I see the need in some areas for journeyman training, because, as you know, it is not uncommon for a journeyman to be sitting on the bench while a quality apprentice graduate is being snapped up as a superintendent or foreman.

Now, about you Carpenters—to quote from **George Vrabel** when he spoke at last year's conference in Columbus, Ohio, he said 'The output of the skilled craftsmen today is declining in our industry whether we believe it or not. The first of this year, we had 987 apprentices in the program. The latest report—June 1st showed only 917 with in the program. 'We can sit back and watch this program decline and keep on declining or we can take interest in it and then never have to worry **where are we going to get the craftsmen** to supply the demands of the industry.'

"The decline George referred to has been arrested. Our beginning carpentry apprentice classes this fall represent an increase of 300 per cent. Machine shop increased 60 per cent. Industrial programs 100 per cent. We are on the upswing. We realize we have found ways to attract and train quality people. We must work hard to keep it up.

"In closing, I'll revert to the academic—as I see it, the biggest problem of all is the fact that not enough fine young men are receiving the splendid opportunity to pursue apprenticeship training in some areas. Eighty-five per cent of our high school students are pursuing college prep or general courses in Ohio. I won't enlarge on statistics, but not nearly that number actually enter. Among those who do not, there are thousands to identify and train as craftsmen. We must find ways to do this."

Mr. Nahra introduced the second speaker, **Mr. W. S. Coulter**, Public Information, Columbus, Ohio, who was substituting for Mr. Thomas Gallagher, Supt. of the Division of Safety and Hygiene. Mr. Coulter's topic was "How a Safety Program can be Conducted in an Apprenticeship Program."

"Safety programs for certain segments of industry are being written by those who are directly connected with this type of industry as they are on the ground floor and they know what the industry needs in safety programs.

"Safety is a product that the Division of Safety & Hygiene is selling to labor, management and industry.

"The necessity of safety programs in apprenticeship training is obvious. Training an apprentice in the necessity of job safety not only makes him safety conscientious but a better mechanic mindful of his welfare and his employer also.

"Films for Visual Education are available in safety on the job. The films cover safety problems in various types of construction. Films can be obtained from the Division of Safety & Hygiene but sample time should be allotted in ordering same as the demand for all films must come from the Columbus office.

"Where journeymen apprentices have the proper on-the-job safety training, the ratio of accidents is reduced from a 5 to 1.

"Everyone interested in safety must take an active part. The accident frequency rate last year was the lowest in years.

"A committee of any size could be established to keep advised on safety programs needed to teach apprentices in any branch of the Building and Construction Industry.

"The industry can send men to learn on-the-job safety and then have them return to their branch of industry and teach others.

"The contractor who travels in the construction field is constantly training new employees to keep the accident ratio on the job at a low level.

"The Division of Safety and Hygiene has 127 empoyees of which 70 are in the field."

A panel discussion followed the remarks of Mr. Weber and Mr. Coulter.

The question and answer period took up the rest of the time allotted to the morning session of which there were 37 persons in attendance. Section adjourned at 12:25 P.M.

* * *

Chairman, **D. E. Bowman**, introduced the first speaker, **Mr. Harry F. Davis**, Supervisor, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio, who made the following remarks:

"By 1970—just five years from now - it is projected there will be 85 million Americans at work or looking for jobs. Almost 20 million of these Americans will be young people 14 to 24 years of age. 50,000 young people in this age group are entering the job market every week. 7142 a day — 297 every hour — 5 every minute. Since I acknowledged to the chairman and made my opening remarks and to this moment - approximately 10 young people in this country became a candidate for employment.

"Education, or the lack of education has, and will continue, to play a most important role in the success or failure of these young people - to find - and to hold a job. For approximately 1/5 of these young people will not be employed. Many who are employed will lose out to job changes.

"Actually - more jobs are looking for people than there are people looking for jobs. True - we have four million unemployed in this country today - but have you looked in the want-ads lately?

The newspapers are loaded with advertisements for men who can perform the needed skills and services of an increasing - fast moving technical society - men and women with the training and ability to meet the challenge of automation.

"There has been a constant fear that automation will erase skilled labor, and in fact, most jobs. If we were to start counting the skilled occupations automation has erased so far - we couldn't even use up one hand-full of fingers. But, by the same token, if we were to count the jobs (unskilled - semi-skilled) that automation has erased - all the fingers in this room wouldn't be enough. Yes, even the nature of skilled occupations has been changed - even more significant have been the results.

"To illustrate — many of you enjoy getting into your modern automobile - made comfortable and easy to operate through the automation adopted by the industry and sometimes only two weeks after it first started through an assembly line - and driving that modern piece of machinery over the old roads to take in the beauty and quietness of the countryside.

That **old** road probably was the main road of twenty years ago - which has been replaced by a modern 4-lane highway. While you drive on the old road - you notice it follows the contour of the land, if there is a hill ahead, the road takes the lowest part around the hill or along its edges to the top. Today - they cut a path through it - or slice a path up it - or even totally remove the hill. Just how many skilled jobs did modern automation erase in this industry? No, it will be a long time before a machine can make a machine. Machines can duplicate man's thoughts, but they will never duplicate man's dreams.

"Let's go back to these young people who are entering the job market. The number who have entered since I opened is now up to about 20 or 30. Let's look a moment to see what education means for their future.

"If I did my mathematics correctly — according to statistics — about 35% of these young people did not receive their high school diploma. Many of these dropped out of school before they reached the 10th grade. The majority have no saleable skills to offer an employer. Some will serve an apprenticeship and reach the skilled — journeyman level—but, only after renewing their acquaintance with education.

"There is statistically a direct relationship between un-employment and years of completed schooling. Plotted statistics show that the less years of school attained by an age group, the more un-employment will exist in that same age group. To further emphasize the relation of education to successful employment - government studies show that over a working lifetime, high school dropouts earn $32,000 less than high school graduates.

"A study made by the National Chamber of Commerce shows that the grammar school dropout earns an average of only $3100 a year. Statistics show that the relationship between education and employment is measurable in terms of dollars. And dollars have a direct relationship to the economy of our country.

"So — it is not surprising that education is progressing in this country to raise the attainment of every person. It fluctuates back and

forth because of the inadequacies of man to determine what education is best for the masses.

"You remember Sputnik and the concerted effort in education to convert the classroom into a scientific laboratory - **until** we realized that someone had to make the laboratory equipment - and build the launching pads - and build the laboratories - and service the equipment. We forgot the education of the craftsman and the technician. We forgot that his need for knowledge increased in a larger proporion. So — we re-tooled to meet the demand.

"We have learned that the capability of man's mind has only been pierced to just below the surface. The new methods in education are reaching and penetrating faster the attainment of success in learning. The three R's are learned faster today - supplemented by science. The ability to do the three R's is established early.

"Have many of you tried to help your children do their homework lately? That just **may be** Greek they are studying. Yes - there is a pre-requisite for employment today - Education. The effect on apprenticeship is being felt. The demands of necessary education to fulfill the requirements to enter apprenticeable trades will increase because of the change in our technical society. The environment of your job today will not be recognized tomorrow.

"The relationship between education and employment is known. The change in your job and mine has been projected. How we get the two together - job and education - and impart this knowledge to young people still remains a problem. But we had better hurry. Already in the last 20 minutes or so - over 100 young people were disappointed."

Chairman, **D. E. Bowman** introduced the second speaker, **Mr. Leo Gable,** General Representative, United Brotherhood of Carpenters and Joiners of America, Washington, D. C.

Mr. Gable's speech as follows: "The Carpenter Apprenticeship Standards and Their Application to Local Apprenticeship Training".

"The National Joint Carpenter Apprenticeship and Training Committee composed of representatives of the United Brotherhood of Carpentry and Joiners of America and the National Association of General Contractors of America, Inc. have revised their National Joint Standards this year.

"In making our revisions we considered the changing aspects of the building industry and the need for streamlining the work processes and the inclusion of new materials and techniques.

"The Revised Standards include Standards for

(1) Carpenter apprentices
(2) Millwright apprentices
(3) Mill-Cabinet apprentices

"Further, the Standards provide for future expansion, as new needs for training develop, by permitting the addition of supplements to these Standards when jointly agreed to by the members of the National Joint Committee.

"Included as a part of each of the three Apprenticeship Standards is an outline of the Related Instructional Topics that are to be considered as a minimum for the related training programs. To assist

the instructor a list of the recommended Text and Reference books are included.

"It should be noted that section 9 of the Revised Standards dealing with the **Selection of Apprentices** does not include all of the language recommended in Title 29 Section 30 from the U. S. Department of Labor. The National Committee objected to certain provisions of Title 29 Section 30 notably that applicants should be selected on the basis of merit alone and without regard to sex and physical handicap. Therefore, the Committee prepared their own statement on selection.

"Incidentally, these Standards including the Committee's Statement on Selection of Apprentices have been approved and registered with the U. S. Department of Labor, Bureau of Apprenticeship and Training as attested to by the letter addressed to the National Joint Carpentry Apprenticeship Committee and signed by Mr. Hugh C. Murphy, Administrator.

"Now on the Application to Local Training Programs.

"Those of you who are members of the United Brotherhood of Carpentry will know that our Constitution and Laws provides that the First General Vice President is responsible for the development of uniform procedures and training materials to be used in the organization of apprenticeship programs and the related instruction of apprentices throughout the jurisdiction of the Brotherhood.

"It is also the intent of the National Joint Committee to bring about greater uniformity of training and higher standards of efficiency and service for those entering all branches of the field of carpentry, regardless of the locality of their training, than has been achieved in the past.

"Therefore, the National Standards do have an important and vital bearing on the Local Training Programs.

"The National Joint Committee being fully aware of the needs of local committee for assistance in complying with new government apprenticeship regulations have prepared a qualifying test for apprenticeship and training applicants and the Brotherhood Committee has revised the apprentice application, apprentice agreement and the master record keeping system, thus providing the means whereby local joint committees can be assured they are in compliance."

Panel discussion followed the two speakers. Panel composed of **Mr. Harry F. Davis, Mr. Paul H. Loper, Mr. J. Neil Crowley** and **Mr. Leo Gable.**

The question and answer period followed the panel discussion and took up the balance of the afternoon session.

Motion by **Mr. Joe Loris** and seconded by **Mr. Paul Loper** to give the two honored guests who were speakers at this afternoon session a vote of thanks for the wealth of information they were able to give us in their speeches and discussion period this afternoon. Motion carried.

Mr. Leo Gable spoke about the selling job needed in getting the contractors to take a more active part in apprenticeship training as a lot of contractors and builders are contributing through certain apprentice funds and do not have any apprentices in training.

Session adjourned at 5:00 P.M.

CEMENT MASONS, LATHERS, AND PLASTERING TRADES

Wednesday **October 27**

CHAIRMAN

William Letcher, Business Representative, Operative Plasterers' and Cement Masons, L.U. #1, Cincinnati, Ohio

SPEAKER

Alan Montague, Supervisor of Field Engineers, Portland Cement Association, Columbus, Ohio

REMARKS

Augustine E. Birch, Supervisor, Apprenticeship Information Center, Cincinnati, Ohio

John R. Anderson, Local 801, Dayton, Ohio

Donald Snyder, Cement Masons 886, Toledo, Ohio

Salvatore Scherma, Cement Masons #404, Cleveland, Ohio

Eddie Campbell, Business Agent, Cement Masons, Local 524, Cincinnati, Ohio

Gilbert Wolf, Instructor, Bureau for Lathing and Plastering, Cincinnati, Ohio

CEMENT MASONS, LATHERS, AND PLASTERING TRADES

(First & Second Sessions)

Mr. William Letcher, Business Representative, Operative Plasterers' and Cement Masons, Local Union No. 1, Cincinnati, Ohio, called the meeting to order at about 9:45 A.M., after welcoming the conferees, and then turned the meeting over to **Mr. Alan Montague**, Supervisor of Field Engineers, Portland Cement Association of Columbus, Ohio.

Mr. Montague passed out a list of available films that would be applicable for use at union meetings and apprenticeship schools. These films are available free of charge by writing or phoning the Portland Cement Association. He stated: "We send them out with a return address card so all you have to do is paste it on and return the film to us. These films would only be of interest to the cement masons. In my opinion, we do not have anything for the plasterers, but we do have a piece of literature about which I will tell you later on."

Mr. Montague proceeded to show a film entitled "Concrete in the Sixties", explaining the film and pointing out that contrary to what many may have thought, the precast units used on precast buildings shown in the film were cast and finished on the job.

"Every year we put out a new movie. We try to keep up on the latest stuff that is happening - new techniques in finishing, different types of structures, etc. Precast stuff is not finishing on the job as we have done it; it is a new era. We are trying to get a market for concrete that we do not normally have: wall construction, how to make patios and how to make loops and curlicues, etc.

"All the movies we put out are equipped to help you with your finishing in any way you like. We can provide these movies for you; we can obtain literature, or we can help you with the classes wherever it is necessary, and we are always willing to do this.

"The book I am now holding is the instructor's manual. How many of you are familiar with it? I know you are using it in Cleveland. This is a book that was made up specifically for teaching in high schools and in cement mason classes.

"This book gives you, I would say, a year's course in concrete technology. It is a very good manual and copies of it are available free of charge through the Portland Cement Association.

"I believe the International charges $2.00 a copy for your student manual which is no different from the instructor's manual, other than it is not as big a book being that it does not contain construction pages. The instructor's manual has more material in it since it was developed for use in your cement mason classes. It is being used in trade schools as just a trade course. But as I say, this manual is available to you for your cement masons' apprentice classes and it works out quite well. For your information, it would not be bad to have one.

"We need very desperately in the concrete industry today - technicians. - journeymen with technical knowledge of concrete and concrete design. The Portland Cement Association now has such men; however, many more are needed in the industry.

"Now I am not being derogatory because I have worked with you guys too long to feel that way, but you know some of you boys just aren't as good as some of you other boys. Some of you learn a little faster than the other fellow and so everyone is not gifted with the ability to be a good finisher, and certainly everyone is not gifted to take that ability and teach it to others.

"As you noticed in this film, the trend is to decorative concrete, to special finishes, and precast work. We have had inquiries from many places that are building these precast units, these fancy decorative panels, etc. for a man who can work with this concrete that knows what it takes to finish it and mix it and get it into place. See what they are looking for?

"They can hire an engineer who can slip the slide rule and say, 'Yes, boys, this is the right concrete.' But a lot of this stuff is being put into areas where we never tried to put concrete before, and we are using a lot of different materials which you guys are not too fond of, but nevertheless, this is the present trend.

"We desperately need the men who can tell us whether or not a particular method is right. There are certain things I know, but I am not a finisher. You have to be a finisher to understand whether you are using the proper materials under the right conditions.

"The finisher says, 'It is not right.' We need someone who can make it right. The engineer does not really know what the problem is, does he? The finisher knows what the problem is - he knows there is something wrong, but the need is for a guy with enough education to design this light weight aggregate, pearlite, or hard granite stuff — anything you want to talk about, in a measure that is right in the plant.

"We are talking about precasts for now, about a new growing industry in the United States, and they definitely need these boys. True apprenticeship skill is the only way I know of for me to be able to sell somebody on the idea that this is a necessity. It must be someone who is willing to study and work hard to become a finisher because this is a desperate need.

"We tried for three years to find a journeyman finisher to work with the Portland Cement Association as a lecturer and a demonstrator for cement finishing techniques, and we now have one. He is available for 7 states throughout the midwest, so we only get 1/7 of his time, but it took us a long time to find a guy who could do the things I was talking about. For everyone we find, we need 100 like him.

"Every big ready-mix operator in Ohio could use the man I described. Most of them now have a technician of some kind to do their mix design. Almost every big ready-mix man in Ohio has salesmen out on the job. Think what a salesman would be who was also a cement mixer. I believe that this may be something you haven't thought about.

"We think eventually that ready-mix people will want to have on their staff a man who is carrying a union card. Perhaps you don't care whether he does or not, but what I am saying here is this 'We have a need for the men who are familiar with ready mix concrete'.

"I think we should be able to sell contractors on the idea of apprenticeship and tell them that the horizon is unlimited. When you go out, recruit these apprentices and talk to them about studying to learn the techniques of the trade.

"It takes about a year or year-and-a-half before these fellows begin to realize that there is more to it than just the ability to finish. I know that if we are able to get across to these boys that just a little bit of this book learning is going to be of benefit to them, it is going to be useful.

"In closing may I repeat again that we have people available to help you with your apprenticeship programs and to demonstrate methods of applying various textures and finishes on concrete surfaces. Our films are available to you as well as our literature.

"We have worked together and shall continue to work together as we have more to do to promote apprenticeship training in our industry."

Mr. Letcher thanked **Mr. Montague** for a very comprehensive discourse and a very constructive movie.

Mr. Augustine E. Birch, Supervisor, Apprenticeship Information Center, Cincinnati, Ohio, was then introduced and he explained the function of his organization. The information Center gives aptitude tests to potential apprentices, and after the testing they determine from the testing procedure for what trade or industry the applicant is best suited. They also refer these applicants to the various trades, upon the request for such people from the trades.

Mr. John R. Anderson, Local 801, Dayton, Ohio, remarked "I have been working a long time with the Civil Rights Committee and I have been advocating the same thing as Mr. Birch—more education and training for young people. I am in full accord with the concept of apprenticeship training."

Mr. Donald Snyder, Cement Masons 886, Toledo, Ohio, reported on the desire of International Organizer, Donald B. Johnston, to initiate an apprentice program for Heavy and Highway construction and through the Ohio Contractors Association's Collective Bargaining Agreement with O.P. & C.M.I.A. It has been proposed that the apprentice be indentured to a state committee, he said.

Mr. Snyder expressed his concern about training of apprentices specifically for road work. He said "What we have in the Toledo area is a Joint Apprenticeship Committee. The boy is indentured to the Joint Committee and through this three-year apprenticeship training program, this committee moves this boy from highway, to house work, to commercial floors, to basements so that he gets a well-rounded education in the trade of the cement mason. If they indenture people in highway work and they stay on heavy highway work only, when this work ends, all you have is a bunch of unqualified cement masons. We can't let this happen. These apprentices must have a well-rounded education as a Cement Mason."

Mr. Salvatore Scherma, Cement Masons 404, Cleveland, Ohio, also commented about the disadvantage of having apprentices work on road construction for an extended period of time.

"They learn only so much on the road and do not get the diversification that makes a good journeyman. If he works with a contractor

on road construction for say two years, and then is placed with a home construction contractor, his pay scale is too high for his lack of knowledge on home construction; therefore, the contractors balk at employing highly paid apprentices who are incapable of performing the type of work they need."

Mr. Eddie Campbell, Business Agent, Cement Masons, Local 524, Cincinnati, Ohio, inquired where the apprentice could receive related instruction.

Mr. Snyder reported that it has not as yet been set up.

Mr. Joseph L. Phillips, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Columbus, Ohio, related the position of BAT by informing the group that BAT is insistent that apprentices receive the diversification that their work schedules call for and that they receive a minimum of 144 hours of bona fide related instruction per year in order to qualify for a certificate of completion for apprenticeship.

"It is the responsibility of all concerned to assure that accurate records are kept regardless of the manner in which related is acquired. It can be in local systems, in evening classes; it can be in accepted correspondence courses, or it can be in home-study assignments, but there must be an accurate and bona fide record of the number of hours spent in related.

"It is true that a contractor opposes paying a second or third-year apprentice his rate if he is absolutely incapable of performing any of his needed tasks because of lack of experience. It would be ideal if the state committee could be established and apprentices indentured to that committee and moved rather frequently from road to home construction so that they would gain experience in both. This then, would make them valuable throughout their whole apprenticeship in both road and home construction."

Mr. Gilbert Wolf, Instructor, Bureau for Lathing and Plastering, Cincinnati, Ohio, reported on training in the Cincinnati area. The situation there is unusual in view of the fact that this J.A.C. insists that new apprentices be started as apprentices, then become journeymen to sustain the number of men the industry needs in long-range projection.

"This is in spite of the fact that for the past year or so the construction industry has had such a small amount of work that many journeymen are sitting idle. You cannot, for the good of the industry, constantly vary the number of apprentices on spasmodic work conditions.

"They train apprentices how to handle 4 x 8 sheets and try to keep abreast of the main technological changes that are occurring, and will occur in the future.

"The plasterers may adopt a 1¢-per-hour training fund. The lathers now do.

"Cincinnati moves their apprentices around into different situations to keep them going because the work is so bad in Cincinnati.

"He related he has a dual job, as he represents the plastering industry and is also a teacher of the apprentices.

"In industry promotion the apprentices do civil projects. Last year they worked with the zoo to make an Otter Island. The boys

worked on their own time and all material was furnished, and the finished project donated to the zoo. This year they are going to sculpture two life-sized horses for the Park Board. This will also be donated. This is the type of project that people can enjoy and is real good industry promotion.

"Another thing they do to provide good experience for apprentices is take them to sites where materials are made. It helps the apprentice know more about the material; therefore, he is more adept in its use."

Mr. Letcher stated that other industries could profit from similar projects. "In Cincinnati they had to drop five apprentices in the plastering trade because they lost interest. Some of them were even related to the journeymen and contractors. This highlights the importance of careful selection to assure that the apprentices have all the necessary interest to become journeymen, and their training especially in related instruction is so important to the interest."

Mr. Campbell: "It is also now quite obvious that the upgrading of journeymen to keep them abreast with the changing times is as necessary as training apprentices In fact journeymen who do not receive any upgrading courses are often bypassed by men who are still apprentices in their knowledge of the industry needs and the use of new equipment."

Mr. Hugh M. Smith, Timmons Butt & Head, Inc., Dayton, Ohio, remarked "Dayton has a 2¢-per-hour training fund which is working out very well to provide the financial needs so that apprentices can have the finances that will permit many training experiences that could not be had without the advantage of this fund."

Mr. Walter Sells, Coordinator, Board of Education, Trade & Industrial Education, Toledo, Ohio, spoke about education in general and its benefits.

"Kent State University recognizes 7 years of in-trade employment and certification of instructors. If he has been processed through a 4-year apprenticeship program, then 3 years of in-trade employment will qualify him for certification.

"There is a close relationship between the Vocational Schools and good apprentices. Selection of apprentices who are enthusiastic and interested in apprenticeship make for much better journeymen, and graduates of the Vocational Schools are a good source of good apprentices."

The following summary was then given of the points of interest discussed during the two sessions of the conference:

1. Apprentice Information Centers, their purposes and effectiveness.
2. Apprentices traveling from the jurisdiction of one program to the jurisdiction of another program and what effect this would have on the apprentice's related training.
3. A state joint apprenticeship committee to coordinate and unify the curriculum of the various programs throughout the state.
4. Ways and means to send qualified applicants from an area with high unemployment and a surplus of qualified applicants

to an area enjoying full employment with a shortage of qualified applicants.

5. Apprentices presently registered in the three trades in Ohio

Cement Masons	97
Lathers	21
Plasterers	19

6. Utilization of pre-employment training programs through M.D.T.A. in localities where there is a shortage of qualified applicants.

Meeting adjourned.

ELECTRICAL TRADES

Wednesday **October 27**

CO-CHAIRMEN

Jerome Lyons, President, Mutual Electric, Inc.; Chairman, Joint Apprenticeship and Training Committee, Dayton, Ohio

John Allen, Instructor and Member Electricians Joint Apprenticeship and Training Committee, Dayton, Ohio

OPENING REMARKS

Russell Lane, Business Manager, Local Union #82, I.B.E.W., Dayton, Ohio

SPEAKERS

George Pennington, Chief Electrical Inspector, City of Dayton, Dayton, Ohio

H. B. Blankenship, International Vice President, Fourth District International Electrical Workers, Cincinnati, Ohio

Lee Kletzly, Ohio Bell Telephone Company, Dayton, Ohio

Robert J. Coates, Ohio Civil Rights Commission, Cincinnati, Ohio

Andrew Phillips, Assistant Director, National Apprenticeship and Training Committee for Electrical Industry, Washington, D. C.

PANEL MEMBERS

Harry E. Wells, President, Local Union #82, I.B.E.W., Dayton, Ohio

Dave Snead, President, Bohn & Snead, Inc.; Member, N.E.C.A., Dayton, Ohio

Dr. D. H. Price, Department Head, Trade and Industrial Education Service, University of Cincinnati, Cincinnati, Ohio

Lowell Mittlehauser, Vice President, Garber Electric Co., Springfield, Ohio

CONSULTANT

E. R. Puterbaugh, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Dayton, Ohio

RECEPTION COMMITTEE

The members of the Dayton Joint Apprenticeship and Training Committee for the Electrical Industry

Russel G. Lane
Hank La Chance
William Traynor
John Allen
Charles Helldoerfer
J. P. Lyons
Carroll Studebaker
Robert W. Haines

SECRETARY

Dorothy H. Case, Official Stenographic Reporter, Centerville, Ohio

ELECTRICAL TRADES

Mr. Russell G. Lane, Business Manager of Electricians Local #82, I.B.E.W., Dayton, Ohio, opened the meeting by welcoming all the delegates on behalf of the Dayton Electrical J.A.T.C. He gave credit to the various members of the Joint Apprenticeship & Training Committee who were responsible for arranging the program, and then introduced **Mr. Frank Elardo,** Owner of G.E.L. Electric Company as Master of Ceremonies for the morning session.

Mr. Elardo made a few remarks and then introduced the first speaker for the day, **Mr. H. B. Blankenship,** Vice President of the I.B.E.W., and his speech 'Apprenticeship—Our Promise to the Future.' Mr. Blankenship spoke as follows:

"Although I did not elect this subject about which to speak, I think that probably this covers the most important and the most explanatory reason for apprentices at all. Naturally, we all grow older as the years roll by. Naturally, we are interested in our industry. One, because we have helped build it from a rather haphazard installation of unknown things called electricity, and most of us have given our life to the industry and of course received many rewards in the process of doing so and one more is that most of us look forward to receiving a small portion of protection from the industry, and; therefore, we want to leave it in good hands when we retire and step down.

"I have thought that we would expand a little bit on on 'Our promise to the Future', and of course, this theme will not be a surprise to some of you. Some of you may take issue with me. I took the precaution earlier and got a promise from Pat Patterson from Akron, Ohio, in case you people do throw me out, however, I do not believe that will be so unless there are too may present apprentices in the room.

"I think there is no doubt that we have made progress, and we have better mechanics and better facilities and more equipment, but the question arises, are we going to give too much attention to the highly technical aspects of the training and neglect the area in which the journeyman will be spending the best portion of his time? It is true that the well trained journeyman of today must know the basic and should be trained in the modern methods in this industry.

"There is no question about that, and I believe the apprentice program is doing a wonderful job along these lines. The fact remains that conduit must be bent and installed and wires and cable should be pulled, motors and panel boards must be installed on the job and a certain amount of fabrication must be done on the job, and houses must still be wired and, of course, in most of these issues you get your hands dirty. In some cases, it requires the putting out of muscle power.

"My concern is that we might possibly be attempting in some cases to make electrical engineers out of our apprentices and overlook the fact that once we make electrical engineers out of these journeymen, they might feel put upon when somebody tells them to get in a

ditch to install some conduit and get their hands dirty by pulling in some cable.

"We must not train specialists. We must remember to turn out journeymen. I know that this is not strictly the trend. I believe that it is possible; that we should still remember that although we would like to believe that the electrical construction industry is a profession, and I will agree with you that it is to a certain extent, and there is a lot of manual labor connected therewith, I would like to suggest that you re-examine the matter of discipline and review the problems of many of the apprentices and training committees, and in so doing we would get the impression that there is a critical shortage of young men. You know, and I know that the opposite is true. We have a backlog of applicants for apprentice training.

"You that are on the committees and in this program give a lot of attention to the attitude and aptitude and so forth in the selection of apprentices. This should not be confined to the selection of these men and the attitude of the young men that you are spending your money and time on to train to take your place in this industry. I believe it follows that if he is going to be a good journeyman his attitude of cooperating, of learning, of cooperation with the training committee and the director, where you have one; his learning and preparation of his assigned subject, his attendance at the classes and so forth, would be an important thing.

It is my opinion, and I believe that you will agree with me, that if the young fellow that you are training has this attitude during the years that he is going to the apprentice program he is going to make the type of journeyman that we would want to be proud of. I urge the committees to adopt strict rules and see that they are enforced in seeing that the apprentice that you are giving your time to will be worthy to be a journeyman in this industry.

"You might ask, what rules and how should they be enforced? I would like to suggest a few. You know most apprentice programs provide for eight to ten months, most of them are eight month periods, at the end of which time the apprentice receives a wage increase. This applies to the apprentice who barely manages to remain as well as the best student. I would suggest that this be eliminated and substitute therefore eight grades.

"The progress of the apprentice would be reviewed at the end of each period to determine if he should be passed along to the next grade. Now, I know that this is a very good subject to argue over. What I have in mind is that there must be an incentive for the apprentice to prepare his subjects and for him to attend classes although it might be convenient for him to do so. Now, so many of you are or will have one or two or three apprentices that do not show the cooperation you need. You will get your committee together and hold a meeting to talk with him.

"I agree that you should do this once, at least once. You give up an evening, your evenings just because he is not fulfilling the obligation that he has. He is receiving an education that he could not receive any other place in the world and he is assured when he completes his education of a job in an industry that carries some of the highest wage rates and incomes in the construction industry. All of this is done for him. The least he could do is to appreciate, and I don't mean that he

gets on his knees to you, but he could show his appreciation by doing the things that are assigned to him and required by the committee.

"I suggest that when an apprentice is in danger that he be given, in writing, the requirements that will keep him in the program and that he be required to strictly adhere to those requirements. What I mean is that the training committee develop rules and regulations whereby when he is in danger that you say to him, 'These are the conditions under which you will have to operate and you will have to comply and if you do not, then you can no longer participate in our program.'

"I know you have called your apprentices in, and it sounds, I suppose, that we are rather soft on them from time to time, and I have talked to a few apprentices, and I have never heard so many excuses from them, but I believe they should have this in writing for two main reasons; one is that we do not want to waste your time and your money in training a journeyman . . . you know, I don't want to call attention to the reporter here, but I did, almost . . . well, you know the most popular part of the training is, and what the young men say, that, 'pay day is good and you know what the boss is.'

"If the young man doesn't get interested enough to cooperate then he should be in something else. Let him become a doctor or a lawyer or something like that. We want the best in our industry. I don't expect you to go back home tomorrow and adopt this program, but I would urge that all of you who are interested in this training program, I suggest that you do consider these subjects and suggestions and start thinking along those lines. To me, and I don't believe I am being too tough, but see that this apprentice gives his attention and cooperation, or get him out of the program.

"We will hear from some of the best and they will say that we will wind up short in this training program, and we might indenture fifteen or twenty each year, but if we do these things, we might only graduate, say, ten, or twenty men. Well, in the first place if that seems to be the trend, then indenture a few more. Another would be that if you do wind up with a few short you certainly will have a more efficient journeyman.

"Thank you very much. I appreciate being here. I am glad that Pat could stand by. Thank you very much."

Mr. Elardo remarked "Thank you. Do you have any questions? This is the question and answer period."

Mr. Clarence Kistemaker, Local #38, Cleveland, Ohio, asked "Are there by any chance locals, along this line or subject, is there a copy or do you have a copy of the presentation they would make to the apprentice?"

Mr. Blankenship: "Do you mean the rules?"

Mr. Kistemaker: "Has anyone set up any in this line?"

Mr. Blankenship: "No, I don't have anything of that kind. I would not recommend that we try to put out a standard. I believe that you, on the committees, should develop those regulations yourself. Of course, according to areas it might be necessary to vary this. As an example, the apprentice and training on inside construction it varies enough from the outside to warrant this. Mr. Phillips might have something along that line. We do not need hard and fast rules."

Question (party unidentified)

"Might I have your opinion on the national electrical construction material for apprentices, and do you believe that one instructor should stay with that group four or five years?"

Mr. Blankenship: "In my opinion, yes. I believe if it is possible for the instructor to stay with them, provided that he is right kind of instructor, but I mean certainly he gets to know his people and the answers, and the personalities of the people, provided he does not get too 'buddy-buddy' or too soft in handling the apprentice. As to the other, well, I am not too familiar with the material, but I am sure you will get a chance at Andy Phillips on that a little later on. He is quite familiar with this material."

Mr. Elardo: "Any further questions. Well, could we go forward now with our other speaker?"

Mr. Lane: "Yes, I think so. Go ahead."

Mr. Elardo: "The meeting will come to order. Our next speaker is Sales Manager of Ohio Bell Telephone Company Marketing Department. He joined Ohio Bell in 1961 and was transferred to Dayton in 1963. He has a B.A. in Philosophy. This is **Mr. Kletzly** of the Ohio Bell Telephone Company. Mr. Kletzly spoke as follows:

"Thank you very much, thank you, and I want to thank Mr. Lane and all of you for asking Ohio Bell to send a representative over here today. As you know, this is the Amazing Laser. We have it mocked up here for a demonstration later.

"As you heard of this subject you probably wondered why I am here today. Also you heard that I have a B.A. in Philosophy, and you might wonder about my subject. This is a very non-technical, layman's broad view of the Laser. I don't have the background to get too technical. Speaking to you as a group of electrical industrymen, I might get out of my class. However, if there are questions, I might answer them for you. This covers a wide range of subjects.

"You are taught about light in physics and chemistry and radio. We might use as our theme something from Robert Service. He said, 'the northern lights have seen strange sights.' Light is our subject and although we might not see strange sights light has been with us for one long time.

"The Bible says that God created light. There was a religion years ago that worshipped the sun as God. I mentioned this one time, that there were various religions that did worshipped the sun, but I don't know of a religion today that uses the sun as their God . . . but, any summer in this day and age you might see the 'burnt offerings' lying on the beaches.

"We read about light and that it travels 186,000 miles per second. It allows us to see. It is made up of a jumble of frequencies and wave lengths. As we learn more and more about light, it kind of gets you. And this is the basis, the fact that it is noncoherent. It is made up of wave lengths going off in different directions. And, as man became more and more informed there came the time when the light bulb was invented and people said, 'So what?' And 'I still like the gas' or 'Would want and prefer candle light.' I want to say some things about the light bulb, and it could be a light bulb in the home, or perhaps anywhere. We press a switch and it is out. Before the light bulb man had to walk up and blow the candle out.

"This light from the bulb and the light from the sun have one basic property. Noncoherent light. This (pointing out display) would, if left on long enough would have energy enough to light. What happens when we could get coherent light, or at a very high frequency so that every other light might come out and come to a crest at the same time. What would happen if we could have this? We would like to have coherent light, so they started experimenting. Let's think of grade school, on the last day of school in June and the doors open up and the children rush out and one goes this way and one goes another way. This is non-coherency. Now, think of the Military Academys and when they leave classes. They are marching in step and in uniform and walking in the same line. This is coherency. Instead of getting it off in different directions we get it in one beam.

"Laser development goes back to 1958 to when Doctor Shellow and Doctor Terns who were brothers-in-law, and they came up with a paper called 'the infra-red optical laser.' The way this was done they took a piece of rod of ruby color and they basically did this; they circled this with a light space and set off that flash bulb and that caused the atoms in this, and they got coherent light in this manner. This was what they started with, and they only put 25¢ in this and got only a nickle out of it. They did not get their proper effect, and then they started using gases and they have gone back to this and they are using this and that. I realize that I am kind of rushing this and I will explain this when we get into that. In 1958 is where the real strides in Laser development go back to.

"Also, we have Doctor Maimon from Hughes Aircraft, and we do want to talk about the gas laser. I don't know what you might have read about in the way of laser. If you saw the movie, James Bond in 'Goldfinger' in which they were going to cut him in half with the laser light . . . the word laser is heard and you have heard the word 'optical laser' and I will start telling you what this means. Laser and Maser are really acronyms. Maser, and it stands for microwave application . . . and in talking about light amplification, Laser is light amplification by the, that means that if I talk like I am now and then raise my voice, so. Light application by the stimulated emission of radiation. So, it is an acronym.

"Let us now get into the meat of this thing. We have here a glass tube. In the Laser wave we have helium and neon. Ten to one gases that are mixed together. Into this we put a radio signal. We put this fuse into that and take the helium atoms and give them a 'hot-foot.' This causes them to become excited so that they become something other than what they are. It disrupts the atoms or causes the gas to raise to a new high level of energy. They in turn bombard the neon atoms. We disrupt the atomic structure of the two gases. This gets rather technical.

"Let us make this very simple. We send in a frequency, a stimulant into this and it causes the atoms to raise to a high energy level and they become something other than what they are, or were. They in turn to get back to what they were before, and in so doing they cause photons of light to be emitted. It is like getting overheated and trying to cool off, and if you do so, you might feel the heat coming from your body. They, the atoms, get out of their normal estate and try to get back and in so doing they emit photons of light. What happens is that the photons generate something just like themselves and

the effect is that the tube has these generating back and forth inside the tube and they are looking around and in each end of the tube there is a mirror and they reflect back and forth in the tube and keep moving around inside and they just about get out of the end here, and then they are reflected back to the other end. If they should burst out this light energy is going to come out as coherent light. So that taking the two gases and with both of them trying to get out they each make photons of light and you get coherent light as this generates back and forth in the tube.

You might try to look at this light now as it tries to distribute its weight over a certain area so that this pressure, like a woman's high heel, it concentrates the energy into one little beam of coherent light. The highest frequency we get is fifty billion particles of light per second. This is four hundred trillion cycles per second. It is very high frequency. The gases in the rod are dependent upon what they want to do with it. It is dependent upon what they were to use it for. The gases, helium or neon, this is dependent upon what they want to do, this will tell them what to use to get the proper effect. This was very broad in expression. It is interesting, and I think it is the most interesting part, to think of what we might do with this amazing light.

"I would like to go into five areas in which the Laser is being used today and can be used in the future. I use the letters S.I.C.M.M. This is a program done in five areas of science. I think it is very common knowledge that we are trying all five of these on the flights at the Cape, and we do want to eventually land on the moon some day, and to get there we must overcome some problems. As you can see, from the letters S.I.C.M.M. we can get 'sick 'em' . . . which we intend to do. At this point, they are sending up rockets to take pictures of the moon, and it is now thought that beaming this light this Laser from the earth to the moon, and it is now thought that beaming this light this Laser from the earth to the moon we could get the topographical features of the moon and predetermine where we might land on the moon safely. Massachusetts Institute of Technology has already used the Laser beam to the moon and it is possible, as we now know.

"There is a story that when it was beamed to the moon they were trying to record the rebound. They did not, or could not find any indication that it did come back down. They discovered the beams were moving over in another place and they lost the beam. It was coming back but it did not record as it came back too fast for them to properly record. They have another problem on the moon, that is that it is fourteen times longer on the moon, one night equals fourteen days. The Laser beam travels from the earth to the moon at a speed of about . . . beaming about one mile in diameter . . . I am not being too clear on this, say we took a search light and tried it on something like 25,000 miles in diameter and took this 25,000 miles in diameter and reduced it to one mile in order to concentrate it on the moon. This is a general idea of the concentrated power.

"Eventually, they will have a lot of other equipment and power and they might take the Laser beam and use it as a kind of high tension wire and reconvert it back into power for equipment. In the space race they believe the Laser will have good application. The Russians did try, they claim, to measure with the Laser light, and on the last shot they made they tried to communicate with the earth on the Laser beam.

"Right now the scientists are talking about the 'Gillette Power', or how many blades stacked together could be used to cut with the Laser beam. Lindy Corporation had the Laser beam here for sale in the welding of materials and for welding of things that we cannot now weld together. We also mentioned communications and this is where the telephone industry is interested. Say you have a two-lane highway, or four lane, or six lane, or eight lane. You can have two, four, six or eight automobiles. The bigger the highway, the more cars they carry. Same thing with the Laser, the higher the frequency they have the more information you can carry. One Laser beam can carry all the phone, television and data you want to transmit on one Laser beam. That one beam can carry all of this.

"They talk about uses, the wave guide to carry the Laser beam under the ocean, or the ground, they talk about taking the conduit and shooting the Laser through it and out the other end, and you can bend the beam, it works like a flash light and it will reflect this Laser beam, it is line of sight only; as it was used for aerial towers it is a line of sight and might go off into space. It is for communication with the satellites or space capsules.

"One of the two things that will affect the Laser beam is the band waves. Also you have noise and other things that cause interference and that cause it to become distorted. It is possible to fire it fifty miles out into the atmosphere, shooting it up into space the clouds will distort it, and even birds can distort this beam. It is possible to carry communications by the Laser beam. It has been done in Indianapolis and it carried conversation two blocks away. They did it here last spring. They did fire it down south into Kettering to determine what atmospheric conditions would do to the Laser beam. They did beam it from the west and south of Dayton.

"Now, we have here the telephone receiver and the mock-up of the Laser beam, and you have the speaker over here. When I talk through here my voice should come out down there. My voice should be coming out down here. I talk into this receiver, my voice goes down the wire into the gismo here and goes over there. As I am talking now and I put my hand here you would notice the difference. If I talk and take my hand away it comes back here. If I were in New York and I might pick up my telephone and through the Laser Beam, I might be received in San Francisco, and so it can be used for communications. As I said, it was used in Indianapolis, Indiana. Whether or not it will ever be practical for communications because they are very expensive is the question."

Question asked by an unidentified party—"Do you need booster stations on that?"

Mr. Kletzley answering: "Yes. You will have to have towers every twenty five miles for space communications here on earth and in outer space. There was one thing, they can take this Laser and by using materials to get blue or green out of this beam, possibly of such color that it would not be filtered out by the water of the ocean it might be used for direct communication with submarines.

"Medicine is a great field of experimentation. In one area, through accident or disease it is possible for the retina of the eye to become detached from the eyeball. There are now about ten hospitals who are using the Laser beam for this purpose. What it involves is

getting the retina in the position where it should be connected to the eyeball and using the Laser beam and firing it into the eye. As distaseful as it might sound, actually they are searing the retina into place. It is rather like searing a piece of meat on a grill. They weld the retina in place with the Laser beam. The Duke of Windsor had this done, and they, I understand, seared his retina on his eyeball. One of the places close to home here is the University Hospital in Columbus, Ohio, and also Mt. Sinai. They do have this Laser and are using it for the detached retina searing process. This use has reduced the hospital stay to two to four days. The cost of the Laser beam is $15,000.00. The light is fifty-five times greater than the sunlight. You might get an idea of the power of the Laser beam from these, tumors and cancer after shooting at them with the Laser who some effect on them. It seems only to affect the cancer cells and not the healthy ones.

"They have had some good effect using the Laser as cancer cure on animals. There were, I understand, some side effects. It does instantly coagulate blood. They might be able to fire it right on the blood vessel or artery and sear it shut. Knifeless surgery they are thinking of as a means to remove tumors from the brain. Right now neuro-surgeons are doing some things that we thought impossible to do. A Laser beam, I am told, using it as applied to tumor cutting from the brain, is like wanting us to take a hedge clipper to operate on a phone line. This is kind of crude. But this is how fine they can use the Laser beam for these operations as it is perfected. The tumors are below the surface and if exposed they might help with the Laser. I have mentioned only a few areas possible.

"The last area is the military area. Do you remember the Old Buck Rogers light beam? They are now talking about the Laser beams for the radar devices. The Laser beam might be able to give us an outline or a silhouette of what might be flying in the air, or whether or not is an aircraft. It might be someone elses aircraft and it might be possible to render it useless in the air or they might vaporize an aircraft, and it is possible. You might say they are 'way out', but there is a picture of the Laser rifle which was developed using the Laser, and it is ruby rod Laser, and it is possible to use it as a long range means of setting off explosions. They claim they can vaporize paper clips using the Laser beam. There are now about four hundred companies all together working on the peaceful aspects of the Laser and thirty to forty working on the Military aspects of this beam. And, some these things that I have mentioned to you are only scratching the surface.

"They are working out here at the base on this but the Russions have said that 'If you don't behave we might orbit a type of bomb around the earth', and it is possible that the Laser might take control of the device they might use and possibly explode their bomb out in space.

"At this time, I would like to demonstrate the Laser beam in attempting to break this baloon. I am sure that most of you have seen the Buck Rogers type of gun in the comic sheets. It looked something like this gun I have here. It is possible to perhaps . . well, the balloon did not break . . but it is possible to maybe take control of a bomb and may be send it back where it came from, or to destroy it in space. As a military device the Laser does have possibilities. As a radar tracking system and for space vehicles that we might have.

"When I started mentioning the applications of the Laser beam, I was about to tell you that some of these things I mentioned are being done and some are in the planning stages. When I talked with the EUB Men's Club recently out north of town, one of the fellows was from Wright-Patterson A. F. Base and he was head of the Laser research there and he explained it to us. I asked him if some of the demonstrated things were possible and they were very cautious in their aproach to this. These things are not all being done. The cancer cure and that type of thing are only in theory now."

Mr. Lane; "You talked about the mirror which would reflect this. Would this be an effective defense against the beam?"

Mr. Kletzley: " Yes, it would be possible if you had a mirror to reflect the light it might be possible to deflect it from an airplane. Now, we need a material to penetrate the plane. You might have defenses and offenses and a mirror will bend the beam. I am sure you can take a certain mirror which would reflect some laser light and the next one might penetrate it. I think is is quite possible to do that, yes. This is more like the intensity of the magnifying glass moving it back and forth in the sun and regulating the lenses on the ends and getting it spotted or concentrated."

Mr. Harry M. Wells, President, Local #82, I.B.E.W., Dayton, Ohio, "You mentioned the detached retina. These men are all electricians. The ultra-violet rays are very painful on the eye. Wouldn't this be also?"

Mr. Kletzley: "I meant on the cancer tissue. I did mention the Duke of Windsor. There was some successful retina attachments, but the side effects were in the cancerous cells. What the side effects were I am not sure of that."

Mr. Fuerst, Hamilton, Ohio: "What particular material is that tube there, and does it get hot?"

Mr. Kletzley: " This is not an actual Laser Beam. This is the glow from the helium neon. I understand in the real beam it does get pretty hot. To do actual work with this beam they have to have glasses to protect the eyes. This, if real, definitely would get very hot."

Mr. Elardo: " If there are no further questions, we will take a break for coffee at this time."

Mr. Elardo: "Gentlemen, will you please be seated again? We are right on time, and we will now introduce the next speaker. It is my pleasure to present **Mr. Robert J. Coates,** Deputy Excutive Director, The Ohio Civil Rights Commission. His talk is going to be on 'Apprentice Selection - Ohio vs. Federal Civil Rights Laws.' Mr. Coates."

"The problem of discrimination in the State of Ohio has been the subject of legislation from the very year in which this State was admitted to the Union, namely, 1803. The legislators over the years from 1803 until 1959 passed a number of laws dealing with discrimination on the basis of race, color, and religion. These laws concerned themselves with the opportunity for people to have equal access to service as jurors, candidates for office, witnesses, as well as the opportunty to enjoy the advantages of places of public accommodations and to be able to purchase life insurance. The important thing to realize about these laws was that the remedy of the problem

was a public matter and went through the courts. These laws met the problem on a case by case basis and resolved the problem of discriminatory treatment only for the action presented to the court. In other words, a place of public accommodations under the old law could discriminate against a person time and time again, and the person who felt he was discriminated against would have to file separarate court actions in order to have the matter resolved. All of this action was public.

"Shortly after World War II the states and municipalities approached this problem of discrimination in a different way. In 1945 the States of New York and New Jersey passed the first Fair Employment Practices Law and set up commissions to administer the law. The approach to the problem was one of conciliation, mediation, and persuasion.

"On July 29, 1959, Ohio became the 16th state to have in effect the Fair Employment Practices Law. Now better than half of our 50 states have this type of legislation dealing with discrimination in employment on the basis of race, color, religion, national origin, or ancestry.

"The Ohio Law simply stated, says that an employer of four or more persons, a labor organization, a joint apprenticeship committee and an employment agency cannot discriminate against a person because of race, color, religion, national origin, or ancestry, in any area of employment, for the very initial recruitment stage to final discharge, pension or lay-off. The law covers the privileges of employment as well as the conditions of employment. In this area it would cover segregated wash and locker rooms, it would cover the persons opportunity to partake in educational programs of the given employer, or labor organization as well as to take advantage of participation in recreational and cultural programs.

"It is important that we realize that discrimination means segregation and separation and further, that discrimination is a behavior situation, it is an activity which is designed to segregate or separate people because of race or religion or national origin. Prejudice on the other hand, is a mental situation and is not, and actually cannot be, legislated by law. Discrimination, then, is a tool of prejuice.

"In employment, the Ohio Civil Rights Commission moves into investigation in two ways. First, it may move itself into an investigation as we are doing in the investigation of the Cincinnati Building Trades Industry. In other words, the Commission may self-initiate its own investigation.

"Secondly, the Commission is moved into investigation when a person files an affidavit charge setting forth an allegation of discriminatory action on the part of some type of resondent. This discriminatory action must have taken place within the six months prior to the filing of the case with the Commission. The legislature gave to the Commission certain necessary tools with which to effectuate its investigation. The Commission may place witnesses under oath and may subpoena witnesses and documents. Following a through investigation the Commission staff makes its report and recommendation to the five-member body serving as the Ohio Civil Rights Commission.

"In cases where there has been a violation of the law, the Commission then is authorized to move forward and attempt to con-

ciliate the matter. This conciliation procedure is the heart of this type of legislation dealing with problems of discrimination. In conciliation, the Commission staff sits down wth the respondent - employer or union or joint apprenticeship committee and attempts to point out where the problem is as well as a given remedy for the problem. The given remedy is set forth in a document we refer to as a Conciliation Proposal. This is discussed at length and in the Proposal the provisions are set forth for action by the respondent to resolve the matter. A third ingredient is very important here, and that is that the Commission tries to impress on the respondent that it wants to help the respondent meet the problem.

"If the Commission is successful in conciliation, then the Respondent and the Commission together sign a conciliation agreement and the respondent then sets to work in resolving the problem. The Commission conducts what we refer to as compliance reviews over a period of months to see if the respondent has fulfilled his responsibilities in resolving the problem, and then the case can be closed.

"If the Commission fails at conciliation, in other words, if the Commission is not successful in conciliation the problem, then the matter becomes public and the Commission issues a notice of public hearing. Up until this point, the Commission's activity with regard to any case is held in confidence.

'In the public hearing, the matter is set forth anew, and the hearing examiner, appointed by the Commission, then makes his report to the Commission, and the Commission may then issue a Cease and Desist Order hoping to resolve the matters. If the Respondent does not comply with the Cease and Desist Order within a certain prescribed time, the Commission can submit the case to the Court of Court of Common Pleas and the Court then can issue a cease and desist order. If the Respondent fails to comply with the Cease and Desist Order issued by the Court, then he will be in contempt of court and this is punishable by a fine or imprisonment or both. This is the ultimate power of this type of regulatory agency.

"The Ohio Commission is better than six years old, and in better than 2,000 employment cases, the Commission has been unsuccessful in conciliation only twice. In other words the Commission has had to go to Public Hearing with a Respondent on only two occasions and actually, both of those cases were resolved as a result of the public hearing. So, the Commission has never had to take a Respondent to Court to resolve any problem brought to the Commission.

"With regard to a comparison to the Federal Equal Employment Opportunity Commission's activity and the Ohio Commission's activities, we must point out that the Ohio Commission is actually doing the work of the Federal Commission in this State.

"All of the cases referred to the Federal Commission are sent to the Ohio Commission for Investigation and Conciliation. The Ohio Commission has a certain number of days, usually, 60, in which to resolve the problem and under Ohio Law. The Ohio Law is much broader than the Federal Law and covers many more respondents. The Ohio Law further has more teeth in it, in that it is more enforceable than the Federal Law at this time.

"We have had a number of cases referred to us by the Federal Commission since last July 1st, and we have every reason to believe

that we have moved these cases forward as we do in a case that is referred to us by the Complainant.

"In the matter of keeping records of your respective activities, as an organization covered by the Ohio Law, I would suggest that you retain records of all persons who have applied to your organizations for membership or employment and as well as tests and the results of interviews conducted by you or your employees or agents.

"It would be prudent for you to retain these copies for at least one year so that if there is an investigation, the records would be available to the investigator so that he might make a proper determination of the facts.

"If you have any questions, speak up."

Question from an unidentified person. "Does the State law forbid the attachment of a picture to an application?"

Mr. Coates replied "Technically, it does. We have not had a very heavy caseload with regard to apprentice discrimination and that problem has never been positively analized. We have put out a publication with regard to questions that are lawful, and unlawful, in that it says there should be *no photographs prior to hiring. I would apply* the same measurement to the apprentice, in that he is not an apprentice until he is approved and and qualified, and I would say that it is best not to have a photograph prior to his being qualified for the program. The problem is that you may be concerned about people taking tests and there again unless you have a volume of people involved, my advice would be not to have photographs."

Mr. McKiernan (Firestone) "Along that same line, how can you come back, after running the tests and four weeks from now, say, and a three member Board does interview these people, and how do you remember three hundred or even two hundred people if you do not have a picture?"

Mr. Coates: "This is a problem, and we do understand. You can use various means of identification, and I will have to be blunt with you, a photograph is out."

Mr. Bertke (Cincinnati, Ohio) "What protection does the union have, and actually when the charges are filed do we have any redress in regaining our copies, if the charges are proven baseless?"

Mr. Coates: "The protection you have is that there is no publication of the charge. This is all in confidence to protect people from harassment. Sometimes people go to the newspapers and tell them about the charges and we are called, and when they call we tell them, 'No comment.' There is nothing in the law that will give you redress, and I do not know of any case taken to Civil Court for damages. This is not publicized."

Mr. McKiernan replied "If this man goes to the paper, if the charges are not true, there might be libel."

Mr. Coates "I think this would be true only if it is publicly known."

Mr. Hager (Cincinnati, Ohio) "Could I ask why you chose Cincinnati to start these investigations?"

Mr. Coates "The City Council asked us to do this, to conduct the investigation."

Mr. Hager "Did you find cooperation in the investigation?"

Mr. Coates: "We have not completed it, and are holding the information."

Mr. Hager "You can't say what your position is at this point?"

Mr. Coates "No. No, I can't make any statement. I can't make any statement with relation to any particlar company or union. We must be fair with all who are involved."

Mr. Ray Schmidt, Attorney, Dayton, Ohio, "I think you might be interested in knowing what happens where a complainant files a charge against a party, whether it be a union or employer, and if you have gone beyond agreeing what you do when not one of them, one party or another is not willing to agree, what you might do. I think this is a general question."

Mr. Coates: "I will talk with you in the meeting on that. He is talking about a specific situation which is somewhat this, and I hope to resolve this in a few weeks; in an employment situation where there is a contract with the union, it seems to me that all unions involved, all unions are involved and concerned and they should be notified about this. If there is a union problem where they might be charged with race or color, or religion or lack of classification or lack of maintenance of records on the job, or whatever, it the union is involved it is something that might affect management, then management is involved.

"In Cincinnati we are investigating all, specifically the training and journeymen programs, to see if there is discrimination in there. This is nothing unique in Cincinnati. All states have these problems. They are passed to the city fathers and by the local civil rights groups that these conditions exist and the problem as it may be, and if there is a problem of discrimination it has never been solved, and if there is one in Cincinnati, we do have an opportunity to resolve it and be the first to do so.

"We have taken down more information regarding the contractors and unions which are involved than has ever been amassed in any city in the United States. It is very difficult and takes time to answer all the calls regarding this, and I wish we could resolve it if there is a problem. Generally speaking, we have had excellent cooperation and we have had some resistance but I think we can resolve it."

Mr. Eging (Cleveland, Ohio) "Did I hear you mention that there are other tools to identify the applicants, other than photos?"

Mr. Coates "Height, weight, color of eyes, whether they have glasses, type of hair, mouth, nose, scars, and so forth."

Mr. Hauck (Cincinnati, Ohio) "I want to bring up what does the JATC Committees do when they ask for a transcript of the high school grades and there is a photograph on it? We do not ask for it, but it is given to us."

Mr. Coates: "The same thing would apply there. If the applicant sets in motion his own photograph, you did not ask for it, and he gave it to you voluntarily. If you write the high school and ask for it you would be discriminating. If he does it on his own, it is strictly on his own."

Mr. Bader (Cincinnati, Ohio) "I am very interested in the definition of discrimination. I know that you investigate the discrimina-

tion pattern in the Cincinnati area. Is it discrimination to have a numerical proportion? Is this in fact discrimination? I would like to see how you would . . .

Mr. Coates (Interposing) "A pattern of discrimination does not only take into consideration the numerical make-up but the statistics in the situation. For instance the absence of negroes in the program or the employment rules of a particular employer are some examples. The absence does not indicate that there has been discrimination. There are other wide and various factors in this. It is very difficult to say that out of a thousand there may be twenty who are discriminated against. Any apportioning is illegal under the law. We go into several factors involved. They said Dayton has a 12.1 per cent for negroes and we have 12.1 per cent of employment here, therefore we do not discriminate. If it is 24 per cent or 5 per cent that doesn't mean there is a violation of law."

Mr. Wells (Dayton, Ohio) "Do you go into these meetings or hearings with an open mind, or do you weigh the scales for the person who says, or cries discrimination."

Mr. Coates: "About March of 1960 I got a call that a negro employee of a school system north of here was to be dismissed and he had been there for eighteen years. They had a meeting that night, a meeting at which he was to be dismissed and they told me to get up there, and I thought, well, I will drop over to this meeting. The item of interest was thirteenth or forteenth down the line and they got to it at about 11 P.M. It was a very hot, emotional meeting. He later filed a charge, but it was very emotional, and my wife commented that it was tough to keep your emotions out of these meetings. I think I have attempted to do this, and we have had stories come to us that would make anyone emotional. We try to judge the case on the basis of the facts involved. I have trained myself this way personally, and I hope that we are just and prudent in every case. It is very difficult to do so. It is a very emotional situation."

Mr. Wells (Dayton, Ohio) "Have you, in fact, found any cases of racial discrimination to be unfounded?"

Mr. Coates: "Oh, yes. Yes. I have found cases of no probable cause. Yes, very definitely, we have had cases involving racial discrimination filed by all types of people. White, black, and based on religion. Ninety per cent of our cases involve negroes."

Mr. Farrington (Columbus, Ohio) "How does your organization justify sending out questionnaires pertaining to minority groups where we do not take down these?"

Mr. Coates: "The only thing you feel you do not take down is the race of the individual. A complete investigation throughout the State of Ohio of all contractors doing business with the State of Ohio on highways, and construction in this southwest region, we have forty-three of these contractors, and they will shortly receive a questionnaire from us."

Mr. Farrington "What type of questions will they contain?"

Mr. Coates "I am not sure. I have seen it, but I haven't had a chance to study it."

Mr. Lane (Dayton, Ohio) "Gentlemen, it is time for the noon recess. Shall we break now and try to be back here at two o'clock?"

* * *

Mr. John Allen, Instructor and Member Electricians, Joint Apprenticeship and Training Committee, Dayton, Ohio, welcomed the conferees to the second session of the electricians meeting and then introduced **Mr. George Pennington**, Chief Electrical Inspector for the City of Dayton, and Montgomery County.

"You will notice these books. In a sense they are props. They mean a lot also as far as codes are concerned. (Holding aloft a book) I know that in your training program that code is not all of the program. I believe that the electrical code is very much a part of this. An application of the codes to life as it stands, and in the books here as the National Electrical Code Handbook that is revised from 1962 and now we are getting into the 1965 code book. These are some of the changes that you might get into and it brings you up to date. I believe most of you will recognize it as the 'New Testament' of electrical work. I carry this for a number of reasons.

"Now, some of you might be aware of this. I am a Baptist Minister at Lewisburg, Ohio. You might wonder what is compatible between this and being a preacher. I have no conflict of doctrines, and I find that the Bible itself is a code book and to all of those with religious scruples and, properly applied, is a great element in fire prevention of the eternal fire, and in the life hereafter. The code book is also for fire prevention and safety. Most of the things in it are like the lights at a railroad crossing. They never are installed until after a tragedy has occurred. The lights are installed because of tragic things that happen. Most of the things that go into this National Code book go in there as a result of tragedy that has happened and to prevent the same type of thing from occurring again.

"As we look into this you will realize that life is a series of codes. Codes go back a long way. Take the laws of Hamorabe. It might interest you. They were very restrictive laws, back before the days of Moses. He wrote building codes. You might think we are tough as electrical inspectors but at least if something you do causes somebody's son to be electrocuted, or somebody does something that causes your son to be electrocuted, you would not electrocute his son in turn. That does not mean you would pay with your life or your son's life.

"We find that Moses wrote code concerning the laws under which people would live. They also had penalties. That was the law of 'an eye for an eye and a tooth for a tooth'. In fact, I think a lot of people try practicing that law today. We go beyond his time, past Moses' time back in the book of Kings and we find a number of specifications for building. In these we will find there were laws and many people tell us today that from Second Kings is where Masonry gets its direction. We go further into the New Testament and we find that God established laws and that the perfect law was that we should treat our neighbor as ourselves, or 'do unto others as you would want to be done by', and bringing ourselves down to what we call modern times in the essence of what was modern because it seemed that older things worked better than those of the modern times.

"Taking a look at the National Electrical Code, and I believe that you are interested in training people to be more proficient in the electrical code, and I talked with Mr. Patterson who tells me that he has been with the electrical industry since 1919, and I do have in my possession one of the first National Electrical Code Handbooks which was the Board of Underwriters at that time. In New York City . . .

and in the back of this book there is a history of the publishing of this book, this set of standards that they had so many installations in the City of New York, and the fires were so numerous that it came to the point where the insurance companies would not insure your house if it had electric wiring in it.

"They decided then to come up with a code or standard whereby people might have a reasonably safe installation. They wrote the first code book, about the size of this book here (again holding aloft a book) and it is really interesting reading when compared to the complexity of the book today. It did not refer you back to the sections and paragraphs, however, it did not end with this particular time.

"I brought two copies along to illustrate the changing trend. This change is coming about because the technology itself is changing. It is necessary that the code be revised regularly, and in fact, our reporter here today was talking to the gentlemen here when we came back from lunch today, and she was telling them, (and this is not to embarrass you, Mrs. Case,) but to illustrate my point, that when she moved into her new home on Alexandersville-Bellbrook Road how she got into the bath tub and the water had gotten cooler than she anticipated and that she reached for her hot water faucet and in so doing she found herself in the position of being in the electrical sense—'hot'. Fortunately for her she was able to pull loose with the aid of a towel, and then she and her husband called the electrical people to come and look at the situation and they told her that it was 'impossible', and they checked the thing by having her husband touch the water faucet and place his hand in the tub and he got enough of a jolt that it was found to be quite possible.

"They checked it out and found it was energized. That was one of the things that came out in the '50's and plastic items were then made for safety. Code said that you could go to the ground or use the water system. It was optional. Consequently, what happened there, they had driven a ground and the plumbing had been energized through something else and the bath tub being connected back into the earth gave her a perfect return.

"We have had numerous occasions to clip from the paper cases of this kind where the people were killed; and I will say, we are glad this did not happen to the lady here, and I will say that I can prove that this was perfectly possible, and that it has happened. I want to thank Mrs. Case for mentioning this to us. It comes close to us sometimes, doesn't it?

"Across the country we have revised the code to standardize this so that the plumbing fixtures would be joined to the plumbing itself and ground the electrical system to make sure your neutral was always grounded. These are the things that make up the code and go into making them up. I might now mention how your training would affect us. It might surprise you to realize that this apprentice program affects you as electrical men who are using these through your programs. And the man inspecting is affected somewhat along these lines. He is not on the job to make problems, and in making his inspection he also inspects the relationship between the trainee and the electrical contractor. Say it does cost you money for the program, you would still be mad if you had to go back on a job and correct the system; and as far as I am concerned that training, whatever it might be, is one of the greatest things to be able to do—to do a job and do it right.

"There are two ways of learning things. Many learn by accident. Fortunately, they are not killed while learning. We can learn things by doing them over and over again until we have a reasonably good knowledge of it. I have talked with Mr. Patterson about learning by accident or learning by repetition. We agreed that this is all well and good; and we do need experience, but if this is all we have—practical experience, and you take and start employing men without background or knowledge, (and some haven't even had high school training) many of us would lose our hair over it, if it didn't turn gray in the process of the training program; because the apprentices make so many errors in learning, and it might just about break a man. I grew up with the electrical profession, and I learned the value of going both directions.

"I believe most of you started at the time when it was much less complex than it is today. And, you take the complexities that are added to today's profession, and now the man who does the residence wiring and he must figure about how high and how wide, and figure the service that is necessary to take care of all of the needs in the home. And men do fall by the wayside because they cannot figure this. Contractors in the business for many years who cannot figure the low for the service and the various circuits going through a large building, particularly one with several businesses in it, and also a basement. There are many who cannot do this because they have to learn by accident. This costs them. You should expect your men to follow prints as journeymen and to be able to go forward without your being there all of the time.

"I maintain that it is impossible for a person to go out and gain by accident what a man can gain in an apprentice program in the same length of time. I might add, with your apprentice training program in this area, in this program of apprentice training, that this is the only way of training journeymen in the Dayton area. We have no other way than the trial and error way . . . trial and error both are changed . . . and I will repeat what I have heard again and again, that we would like, and much rather have a man that is trained. And I know when you go and send a man out to train and he works along at the same time, and practical experience is a necessity, and you send that man out and he would run into many things that he did not have in the schooling program. You take an untrained man and you will have a tremendous time getting performance from him. We are thankful that there is a method of training men other than by trial and error.

"I believe that is about all, other than the fact that I say again that I appreciate this opportunity to bring our opinions of your training program. Our opinions are high and we appreciate it, and are thankful for this program, and if we can contribute to this as part of the Montgomery County Electrical Inspecting Team we shall be happy to do so. Again, that which makes your job better makes our job much easier, so, consequently, when we enforce the code that does affect the contractor, and they are aware that there is a code that will be enforced, and having a code enforced helps you to train to an end whereby everybody can expect the same thing. We have been told that there is no code across this country today or anywhere in the world that is as effective as the National Electrical Code. This code is revised by people who work with it. Any of the contractors

who wish may belong to the National Association of Electrical Inspectors.

"We do have state-wide meetings each year and we share the things that are good, and things that are needed in the way of changes and we take them to the section meetings and we do have panels that are N.F.P.A. men and M.F.P.U. men, and these people take our recommendations, and they sometimes take fifteen years to get into the code, and it is written by much thought and much trial and error and much practice.

This is what accounts for the code being a dependable code. It is carefully written and many people find out that it is written as a safety code. We have to keep the code a safety code and at standards necessary for safety. You might impress upon your people that it will never hurt you to go the code one better.

"Again, I would like to thank you for this opportunity, and I would like to repeat again, that taking the code and studying it and learning its value and applying it as controlled by inspection authority will add some of the greatest fire prevention that this country has ever seen . . . and so that nobody will feel unsafe for fire reasons. I thank you very much."

Mr. Wells replied "Mr. Pennington has been speaking about something which is very close to my thinking. I am a practicing electrician and have been for many years. During my tenure as an electrician, I have been in this apprentice program and I have attempted in all ways to impress upon our aprentices that which is set up in the National Electrical Code. I have attempted to point out that the code is not to give you a book to go by, but a book for maintaining standards below which you should not deviate, and if you do deviate, you have a set of conditions which are not very safe.

"Mr. Pennington pointed out the question of grounding. Grounding is too much misunderstood. You do apply the code but, you have other things to think about. You have the character of the soil, and the illustration here, with our reporter, is a very good thing; because of improper grounding you set up a condition in which a person may not be grounded at all.

"But, I have one very big complaint with the inspectors and the code, and I think the inspectors are deliberately trying to make the code hard to understand. You start reading a section of the code and you meet so many cross-references you get lost. It was, years ago, a cross-section of the code. The first thing or number that showed up in the cross-reference would show you whether or not it was involved with what you might have to do. If you are familiar with the code the cross-reference was not particularly interesting to you, but now the inspectors, and I say this with venom in my voice, and the Corps of Engineers are deliberately trying to confuse the thing so that the man on the job doesn't know what he is doing. According to the code they might say you have not done a good job. I thing the inspectors hew too close to the book. Here in Dayton we do not go into the code books—it is the law. We say you do this because this is the reason behind the law. I would like to have Mr. Pennington's reactions to that."

Mr. Pennington replied "I want to do the best I can with both of these things. One time they said that 'the code used to be difficult

and now it is impossible.' However, that is part of what I talked about with regard to training. You have been with the code for a long time and have grown up with it—and take a young man coming in with the specific training and, in say four years, what you have given in twenty years, it would be impossible for him to accomplish in that four years what you have done in twenty.

"Now, as to making the code difficult. I will say that the code is not the easiest book to read. It is not an instruction book. It is a book of legal requirements. If you sit down and read it as an instruction manual you are lost. It is only the answers to the problems. In order to do that you would have to go from one to another system, and to other things, and from there to perhaps hook up a non-explosion type or explosion proof motor; and they do use the code book in sections and paragraphs, and I assure you that it would be rather difficult to print this book any clearer than it is.

I present the program put on by the N.E.C.A. boys. I assure you or anyone else that if you have trouble finding a section in the code book my office is open eight hours a day and five days a week, and I will be glad to sit down with you and show you how to clearly understand it. Otherwise it is illegal. I regret that this cannot be a small, simple volume. This is far too complicated to put into one little book. I have on my desk the Engineer's Handbook. It still doesn't cover the entire electrical field. It is more than this has given. This is a book of requirements and not a book of instructions. You must keep abreast of the changes, otherwise you will have difficulty interpreting the code."

Mr. Wells: "I am not looking for instruction. As I stated I am an electrician and have been for many years. It used to be that if you had a particular problem dealing with a conduit you would look under that section. If you had a wiring problem you would go to the wiring section. Not too long ago I called one of your men whom I respect very highly. He is well qualified. And I want to tell you something. Also I have heard a lot of people complain about the inspector. I believe we have got to have safety. Now, when you want to check upon something, we have sections dealing with sizes of grounding and so forth, and that other section depending on the size of the conductor . . .

Mr. Pennington (Interposing) "In the case of one using the common grounding conductor you have two tables. One is on fielding or ground and the other on . . .

Mr. Wells (Interrupting) "You have to have some sort of rules. If we field the grounding according to the amount of current you have to have a bigger connection. When I talked with John and I brought up the questions and the ambiguous statements in the code, and when these ambiguous statements came up, I asked him where do we go and he says, 'Curly, you know about that as much as I do.' There was a case where the code book did not give an answer. I believe, that while the inspectors are here today, and I have been invited into this type of thing, and I refused because I had a very bad impression with the Corps of Engineers with discussion on what is or what is not within the limits of the code. So, I refused to accept the position on these code panels because I was afraid that it would rub off on me. I believe it should be simplified as to being able to pick that particular part out of the index and say "This is it.'

"To go to a section dealing with branch wiring and find other tables at the end of this book, it is a very unworkable thing. I think I will respectfully request that it should be put back in the place where it is simpler for the man to understand, and for a man to go in there and pick out his particular problem and this does not mean I am trying to . . . that I am directing this at you personally, Mr. Pennington, believe me, I am not looking at it for instructions, but in order to simplify this book for all of the workers and to make it easier for him to make a decision and to say 'This is right'. I have pointed out to my boys all along that if you understand the rules behind it you don't need the code, and if you think and are convinced you are right, it makes it simpler."

Mr. Pennington: "In answering you, as far as the Corps of Engineers is concerned, that has nothing to do with us. That has very little to do with the national electrical code, and if you are dissatisfied in there, you have the right to ask for changes and revisions; and if you can back it up with statements, you are all right. I don't think there is a contractor in this meeting that wants to go back to 1937, and if you are going to make progress from 1937 to 1965 you have to revise the code book, and it is not much more complicated than back in 1937."

Mr. Hauck, Cincinnati, Ohio, "We use that book every day in our program—The American Electricians Handbook. There is one thing that I would like to ask. Using the 1965 Code, tell us why the solid black line is on every page?"

Mr. Pennington: "The solid black line indicates there is a change in that particular paragraph. The 1965 Code has been re-edited many times. It is liberlized from 1962, such as the section regarding the bonding on a swimming pool, there, and it is to alert you to the fact a change has been made and for you to check it out."

Mr. Haggard, Local #212, Cincinnati, Ohio, "I think we in Cincinnati realize this problem in understanding the code and they have set up a code committee who will receive from each district and they are making progress now, and I think it will be printed soon, and it will be much more easily understood by everybody."

Mr. R. Zickerlee: (West Lake) "I am Chief Electrical Inspector of West Lake. I am in full accord with Mr. Pennington. This idea of you people saying this isn't understandable. I come from the trades also. Read the first Section under Article 100. This code is well written by people in the know. Instead of just sitting back, get on that code making panel. We don't need the I.Q. to arrange the code but we do need more committees to work on this together. Don't bring personalities into this. Work with this and not against it. If you had to attend the meetings that we have to attend . . . our office is always open to explain the code . . . if you don't want to listen or to follow . . . I may sound rough . . . but . . ."

Mr. Schrader: (Toledo, Ohio) "I would like to have a ruling from the Chair, and I don't htink this should be entered into in this meeting. This is an apprentice and training meeting."

Mr. Allen: "I believe this is well taken. This should come to a halt."

Mr. Kistamaker, Cleveland, Ohio, remarked "This problem is common in many areas. Is there anything in the Dayton area or an-

other area where because of this so called understanding between the contractors and the inspectors and the union, and if by chance this is set up every six months and they meet and discuss this in order to get the true interpretation, and if something is set up, and if so, what is your opinion on this?

Mr. Pennington: "Yes, I would say so. I speak for some of the other groups. I do speak on this, and if you do have a problem with the contractors of the City of Dayton, I am unaware of it. I do believe that as far as the City of Dayton as a whole is concerned, I think if we took a show of hands of the contractors in this area that our relations are pretty smooth in this area. As I said in the beginning, the National Electrical Code is one of the best guides and the best standards and to be without it would be cutting your own throat. But, it is not perfect. This one is. This one changes regularly. It is changed to meet the conditions that exist. If you have anything to offer, I am sure that this gentleman is not aware of the writing of the code by all members. Everybody has a voice in that."

Mr. Wells, "I would like to make a statement."

Mr. Allen "I think, gentlemen, we will bring this to a close. We are fortunate to have with us today the Supervisor, or rather the Assistant Director of the National Apprenticeship and Training Committee for the Electrical Industry, **Mr. Andrew Phillips** from Washington, D. C. and he has a program to present to us. Mr. Phillips.

"Thank you, Mr. Allen. Mr. Chairman, gentlemen, I am very glad to be at this Ohio State Conference. I am originally from Hamilton, Ohio, and I have attended these sessions for many years, and I am now working in the capacity of Assistant Director, as Mr. Allen mentioned.

"I am here in the interest of apprenticeships. I know that we are behind schedule and the rest of the program is really the meat of the group here in which you share or exchange your experiences with each other, so I will keep myself brief in my remarks.

"However, I would like to comment on a few things, and I know most of you personally, and I am sure you have contacted our office at some time or another, and that our office is jointly sponsored by the National Organization. In 1941 the I. O. and N. E. C. A. decided they could do collectively what they had not been able to do individually. They them formed the National Joint Apprenticeship Committee in 1941. A group from I.B.E.W. and N.E.C.A. met and laid down certain rules and did certain things. In 1952 they employed a National Director, Bill Damon, whom most of you know. He promoted interest and encouraged people to look into the field of training. Thereafter, he left and they employed another fine man. We work full time in the apprenticeship field. We work only in an advisory capacity. We are here to serve and want to help you in any way we can. I think the chief function of our office is to make within limits an effort to put forth in industry a position of solidarity of team efforts.

"I know you have heard many times what we do, and in spite of that we find that certain groups do not always take advantage of what we try to do. From our office we issue contract clauses that are to be negotiated in your local labor. They provide for financing of the program and they spell out what is expected of the committees

on training. You only have authority to operate as is derived from the contract. If your contract is not developed you may find yourselves without the backing of the groups which are appointed to do the job. If you have a proper contract and the language is correct, you have a full one, including the number of apprentices, and the deploying of them, and again you can adopt any language you approve. And we suggest that you take a look at the language used, and just like the code book, we have to search under certain sections.

"In 1959 the Labor and Disclosing Act came into this and it brought about the necessity for Federal Legislation pertaining to Joint Funds. It is necessary that we have training treasury funds. We did not sit down and write them, each of you had the right to go to an attorney and write up an agreement, and you would have no way of knowing if it was valid or not, so the industry voluntarily executed the proper papers to make it possible for you to legally expend monies.

"The I. O. and the N. E. C. A. lawyers concurred in this and we hope you will adopt it. We also prepared National Standards. Basically what we try to present to you is a program. Our office also produces the National material which most of you use . . . nationally and almost universally. We set out to produce four years of material in four years. We were on schedule last year for the first time. We appreciate comments on the material from you people and this is our way of finding out if we are on the right path. It was found that there was a void between the prints that we had, and we added a couple, and it became apparent to us in talking with our people, that the best way to learn about material is to teach it.

"We have several other things, as you know, we have tried to move cautiously in the field of training. Brother Blankenship made some rather pointed remarks this morning. It is apparent that we are being timely and meeting the needs of the industry. Yesterday you had a small workshop upstairs here, and I think you all realize the value of these things. We do have a recommended film list. We now have several demonstration boards, and after you teach 'why', then you demonstrate.

"Brother Blankenship talked about the level of training. Quite possibly you saw this little drawing yesterday. It is called the 'Bullseye'. I am sure you have seen it. Each time that I write a lesson I find I must tell myself 'to be a journeyman wireman you must know certain things.' If you do not know these things that fall in this 'bullseye' you are not properly trained.

"There are other things that you should know and you get them from experience. Over here are other things that are nice to know, but in this field of training 144 hours for four years we must concentrate in this 'Bullseye.' We are very conscious of this. As a teacher, I love to talk about this, and this is where the apprentices, if you permit them, will drag you to. This is very interesting, this 'Bullseye'. For example, if I were to try to write on the Laser Beam, could we do this and justify it?? . . . No . . . this has nothing to do with our code. Anyone that isn't teaching code and blueprinting is not doing the job assigned. In preparing this material, this is the big job.

"Before we had organized training we did have a lot of good men in the I. B. E. W. that had a lot of skills and that had a lot of

knowledge. We did have some others and those of you who are mathematically inclined, and others who had not kept abreast of the pace of this industry. We are trying to establish some base or level for properly training in this industry so that the men may be trained for, and qualify for it, and we have tried to bring everybody up to this level. (Pointing out on chart drawn on blackboard) And, we hope that when properly used and executed by you in the classroom that there will be a few who will go forth with some of the good things in mind to make for attaining the level of the recently graduated apprentices.

"We have eight journeyman courses. Six are lifted completely out of the apprentice material. Throughout all four years of the apprenticeship, code is taken and they are packaged into a journeyman's course. It takes about fifty-two hours. It contains what you ought to know to understand the code and clear up problems, or rather problems about the code. It was recently revised and is now based on the 1965 code. We did get a few copies before it was released and it gave us an opportunity to prepare and get this out to you with the release of the '65 code. You have a cross-index in order that you might use the '65 code.

"After these six courses, A. C. Theory, Basic Theory, Blueprint Reading, Code, Motor Control, and Electronics, we lifted right out of that the hopes of bringing our people to that level. We do have people who want to go on into other things. We have new work opportunities that come to us. Our employers want to go after this work because they have men trained and qualified to do that type of work. We are now adding things in the training field, however, we are making a change in the operation of our training.

"Journeyman training is a must if we are to keep abreast of things, and it is your preogative to do this. Some of you have tried and have not had much success. There are those who fall on their face in attempting it. We do have ways to cope with the situation. We see very definite results with this. We have ways to cope with this situation. We see very definite results with this.

"We have one program in which seventy-eight people wanted to take the electricians course. There is nothing that sets you back so much as a failure. You do have to know certain things and you have to understand theory.

"We suggested to the Director of the Training Course that he take all three courses and give them to all 78 people, and he found three out of them that did well on all three courses. He told two of them that they would not do well in these. The other type is the man that is not qualified to be there. He finally did end up dividing the 78 men with the two knocked off between the basic and the original theory. There is another phase, and last year while in Long Island they heard us speak on training as I am doing now.

"He did have training in the Engineers Corps, and this fellow did not know you could not do journeyman training, and a couple of weeks later, I received a letter asking me 'could you supply a hundred and fifty training books?' I wrote to him and I did not hear from him, and I really did not expect to hear from him, and finally I received an order for 186 of these and several weeks later I dropped in on him and he had had less than two per cent absence. He sent

out a questionnaire to all members of the local union and said 'if you are interested simply send this in', and he received a number of replies, hence it is apparent that these people did express an interest.

"The next thing he did was to send them out and requested that they attach their check for $20.00 and then report on a certain date. The first night they came to class he told them that the people with 85% attendance would get their $20.00 back. One hundred forty-nine completed the course. Some of these people are now taking A. C. Theory. You can square people away in this manner, but he has a good system going now. There those people do believe in training and the ones who want training and participate in it are really loving it.

"There are a couple of more points I would like to make before turning this over to the committee. I told you I was long winded. Brother Blankenship made a couple of remarks that I concur with one hundred per cent. He did talk about discipline of the apprentice—what is expected of them, and how you go about bringing them into conformity. This is taken care of in the National Standards. In too many cases we adopt things without studying them. There is a lot of information in these standards. In too many cases we do adopt them to fulfill the legal aspect.

"For example, if your committee suggests you look at Section 3R of the standards, it says as follows: 'The Committee shall prepare and distribute to the apprentices, indentured under these standards, a written policy statement which sets forth the current rules and regulations for the conduct of the local program. Such policy statement shall be subject to revision by the Committee without notice.' Now, what does this mean?? In your standards you do not want to write a bunch of rules and regulations that are subject to necessity. You must have a written policy in this also to solidify this point and pin it down.

"Section 21 says as follows: 'The rules and policies of the Committee as presently in existence or as may be adopted from time to time shall have full force and effect under these Standards.' If you have not written this policy statement let me suggest you do so. Write down what you expect of your apprentice and give it to him and make him live up to it.

"Another thing was about raises. Should one who does not meet the actual performance you expect of him be promoted?? The only way to control the apprentice is to control his money. By all means look at Section Eleven under 'Wages.' That should be Section 12, and it says, 'Apprentices shall be employed on a stipulated hourly wage basis, as provided in the collective bargaining agreement. The schedule of apprentice wages will be stated in per cent of journeyman rate and provide for eight periods of 1,000 hours of employment each. Increases shall be subject to satisfactory progress on the job and in related instruction.'

"Now in Section 11, which is regarding advancement of the apprentices. It reads: 'At the end of each 1,000 hour period of employment the Committee shall examine the progress of the apprentice on the job and in related instruction. Action must be taken on each apprentice to approve advancement, extend present rating for a specified probationary period, or cancel his indenture.'

"Is the apprentice due a raise at 1,000 hours, or eight months?? It depends upon how long he has worked. Going on, it says the Committee shall examine the progress of the apprentice on the job, and so on. In other words in many cases our Committee uses the negative approach to this. Unless there is something wrong he should get a raise at the end of six months. One thing to consider is the requirement of 1,000 hours on the job, and he must meet both requirements as such and he must be acted upon for his raise by the Committee, and if not, he should not get the raise."

Mr. Farrington: "On this 1,000 hours, do you keep this on the basis of a forty hour week? What if you have an over-time job?"

Mr. Phillips: "If he has worked on the job a specified number of hours, you would use your own judgment. The important thing is a sensible decision by you on this apprenticeship."

Mr. Valentine, Toledo, Ohio; "Have you had any experience with any Joint Apprenticeship and Training Committee adopting the program of National Standards or do you have statistics on the number graduated per cent, per local?"

Mr. Phillips: "We based the preparation of the National material on what the industry thought was the appropriate apprenticeship of four years. Several of the areas have a five year program. If you want a program of this length there is no objection to it. I am going back to the blackboard again. We found that at the end of an apprenticeship most of our employers agree that a man has been given what he needs at the end of the four years. If there is anything he lacks, it is knowledge as related to instruction. We do think you can increase your number of hours. The man hours is one hundred forty four (144). This, normally, is four hours per night for six or eight, or so many weeks. If you desire a five year program that is fine. But we do not feel that five years is required to do the job of training. As I said, we do have a five year program in some areas and they do use these journeyman courses in the five year apprenticeships. We find that we can only recommend what we consider the ideal situation normally. We think it can be done in four years if applied properly and if you get performance out of the classroom.

"Now, in answer to your next question. How many apprentices are turned out on a National basis? This surely is impossible to determine. Selection of the apprentice is one of the prerogatives of the committee. It would be impossible to arrive at a proper figure through any other method. Many feel that you should not have excessive men. It is, in some cases, a valid thought.

"If, on the other hand, we do not turn out properly trained people we cannot possibly completely compete in this area. We are going to have to supply good men. This decision should be made by the Joint Committee. You should determine how many apprentices you are to take. The electrical industry needs more than we could now determine. The dollar value of the work installed takes fewer hours and we do have to allow for hours and allowances for our men. Don't cease your training program because of this, and by the same token don't throw down the barriers and take too many men so that the Joint Committee should carefully study the reports and see what the picture has been for past ten years and you can see how many men are working in the area.

"You must consider the work available to you, and on this you can try to lend your experience and come up with a reasonably good number. I have a rule of thumb on this, and this is they should have something like fifty apprentices in an area of 500 working. You have to look at the local situation, but don't let your apprentice program fluctuate with your local situation too far afield.

"One area had two first year, 26 third year men, and so many in the fourth year. They did not take a very long view of this program. You don't do this and still meet the requirements of apprenticeship. There is no set formula. We do need the experience and judgment of you men on the local committees to get this training job done. Analyze this locally, and we are always available to you to get the job done. I live in Washington, D. C. and I don't think the National Leaders can sit in judgment on the job."

Question from an unidentified person "Is the National Committee still supplying Efficiency Certificates?"

Mr. Phillips: "Yes, sir. When you request them, please give the completion date of the course. We do not want the date of the letter on it. Another little thing that came up in several areas in the state that **I should mention and this is an indenturing apprentice, under Davis-Bacon work.**

"If what you call an apprentice is working on a David-Bacon job the employer must pay him as a journeyman. You might send him out on a house job or something, but stabilize your actions by indenturing him before sending him out. He is registered and this makes him eligible as an apprentice.

"There is one more point. It has to do with selection fo all the men. Some of the local committees are getting into some trouble in this area. I should review what is going on up until the present time. There are several laws on the State books pertaining to non-discrimination. President Kennedy did get the ruling on this.

"There is one more point. It has to do with selection of all the organized labor is very concerned about the impact on our industries. At the time the Labor Department was acting on the compliance with non-discrimination, the Non-discrimination Act, there was C. I. J. C. going on and meeting regularly among themselves and with the government and they were formulating a policy by which we could conduct ourselves in complying with the various laws. This C. I. J. C. is made up of seventeen (17) International Trade Unions. Tom Freeman and Pete Schumaker of the plumbers, and all top level people, they came out with a policy statement which we think is completely fair and workable.

"From this policy statement we did prepare a selection procedure and N. E. C. A. has recommended it to us, and it is issued to each of the committees and they have had very few problems. Title 29 is the implementation brochure that spells out how you go about complying with the intent of non-discrimination. When this selection procedure was prepared it was reviewed by everyone and we did get a committment from the Secretary of Labor, and that, when it was used in good faith it would be acceptable. It also provided that those states which had state approved Councils should adopt it and submit to the committee for approval.

"Thirty of the 50 are council states. Most of the thirty did adopt Title 29 and meant it to be subject to interpretations of the various

individuals. Of the thirty states, we have had only a few problems. In two states we have had some difficulty. In Ohio there seems to be very minor differences, and I believe it is a matter of semantics, and approval, I believe, has been slow in developing and it is quite a bit different than the State of New York.

"What the outcome there will be I do not know. Mr. Coates is interested in cases of discrimination. Title 29 clearly states that industry should write their procedure. On what basis is it discriminatory? It is non-discriminatory, and we put out a cover letter and it says this will protect your program and it will also improve your selection program.

"It is very workable. We do recommend it to you. How this will be resolved, and something will have to be arrived at, and we will have to clear it up, but the selection procedure we know in our own minds will do the job of selecting the best qualified people for our industry without regard to race, color, religion or national origin. The problem is, can we use the approved methods of selecting the people qualified regardless of any other situation?"

"It has been very pleasant being here and we do thank you for having us here. I have spoken quite at length, and I appreciate the extra time allotted me. It has been a pleasure talking with you."

Question from an unidentified party: "It seems to be the policy in Cleveland that a man has to be indentured in the local, that is, before he is indentured into the local himself . . .

Mr. Phillips: (Interposing) "There is no such thing as indenturing an apprentice in the local. He is indentured in this case to the local Joint Apprenticeship and Training Committee. This means he serves under their direction, and what he does is sign an apprenticeship agreement in which he agrees to bind himself to the committee, and this covers the job.

"What you are referring to is membership in the local union. This has nothing to do with it. An apprentice does not have to be a member of the local union. He may come into the union after one year. This is why the probation period is for one year. If a man is in the program you have a year to get rid of him to exercise your prerogative to get him out of the program before the year is up.

Mr. C. Kistemaker: "I am involved in the Journeyman Training Program. I am trying to encourage a number in the area to step this up a bit. There is no reason when they cannot do this because I have called on their office a number of times, and I have all the information that I have asked for, and if you tell them what you want, they do dig an answer out for you. I want to point out that there is so much help coming to us from them, it is so foolish not to write them or to phone them on this."

Mr. James M. Pate, Secretary, J.A.T.C., Hamilton, Ohio, asked: "Is there a place for pre-apprenticeship in the program, and what is the status of groundmen in our system?"

Mr. Phillips: "The pre-apprenticeship has gotten to be a nasty word. The government has entered into this field, in some cases almost unilaterally, and so as far as pre-apprenticeship in this industry is concerned it is an open door policy, anyone can apply. We have so many advantages in our industry and we do turn away perfectly qualified

people because there is not enough job opportunities for them. I think it would be assinine to take people to field jobs which do not exist. We do have more applicants than we can accommodate."

Mr. Pate: "What's the status of the groundman? What's he??"

Mr. Blankenship: "You are referring of course to the only place in the I.B.E.W., that is in the outside construction work. What we call line work. It is not limited to line work. It is outside construction. The groundman has the status of the laborer in the electrical industry. We don't call them laborers. In the inside branch of the trade there is no such thing as a groundman. You do have a general foreman and so forth, and we did have, under the Fourth District Line Construction Agreement, we did have, for a number of years, the first six months of apprenticeship training where he would operate as a groundman. The young fellow would work as a groundman and at the end of six months he could apply and qualify for appenticeship. With the negotiations this year they eliminated that and they now go directly into the apprenticeship program. There is now no connection between them."

Mr. Pate: "Regarding pre-apprenticeship. If any local lets themselves get involved in a pre-aprenticeship program you will have the local politicians sticking their noses into these. They are trying now to. do this. They call it 'equal opportunity.' The boys that normally want to go into the trade have no way of going into these and unless you are from an indigent family you can't get in. It has no purpose whatsoever except you pass these tests that they give and if you want into the program, and pre-apprenticeship would be a problem for you. There are only one or two formats that can be considered desirable by the large majority of the people. Pre-apprenticeship gives you a big headache."

Mr. Allen: "Any more questions? If not, Mr. Phillips we do thank you for your time and your comments and your speech."

"At this time I would like to introduce you to a gentleman, **Mr. Charles Helldoerfer** who is a member of the Electricians Joint Training Committee, and he has been for a number of years, and he is President of the Helldoerfer-Castellini, Inc. here in the City of Dayton. Mr. Helldoerfer wil be our panel moderator."

Mr. Helldoerfer: "There is quite an area to cover here today. Before we start I would like to introduce our panel. **Mr. Blankenship** on my left. And **Mr. Phillips. Dave Snead,** Bohn and Snead, Inc., **Harry Wells,** President of Local No. 82, **Paul Snyder,** Principal of the Dayton Public Schools Night School Program, and **Roy A. Kistner,** Columbus, Ohio, Field Representative of N.E.C.A. There are lots of questions to be asked of you, and I want to ask Andy Phillips, and this is something that the apprenticeship committee wants to ask him, In what fashion does our local J.A.T.C. group, are they authorized as an authority on this program?"

Mr. Phillips: "Training is a joint responsibility. We think this is the ideal situation: In many cases getting back to contract clauses, many of these set up the joint apprenticeship committees, and that means this committee is to be the joint training and apprenticeship committee and that training is to be conducted by this committee.

"This does not mean that certain areas are included. Some are separated. Roy spoke on this, and the journeyman training is done

unilaterally. Some of them always will probably fill the void. Here, if you have a committee of journeymen training and do that to the very best of your ability, you might find there are other ways of so doing, but it is your prerogative to do this, and in the long run you will find it is time and money well spent."

Mr. Helldoerfer: "The first question is to determine the progress of the journeyman and Harry Wells might answer this for you. What about testing to determine progress?"

Mr. Wells: "I would say that I am very much in favor of not only periodic testing, but I am also in favor of maintaining our valuation of them as to whether or not they can carry the lines of the trade. As a journeyman and as a foreman in the trade, I would like to say that during the time that we were taking in apprentices that came in other than under our present procedure, and you have seen the man on the job losing out because they did not have a formal training, I believe it is for us to realize that it is very important then that we should not let go of our standard of evaluation. We should not let go of it."

Mr. Helldoerfer: "The second item was covered by Mr. Williams. He did cover that by stating that there should be 1,000 hours of work performed before you changed their grade. The next question would be, How effective have our apprenticeship procedures been over the past years, and so forth?"

Mr. Ray Schmidt, Attorney, Dayton, Ohio, answered by saying: "I think our programs have been very effective, and one important thing is, and I think this is very important, that a journeyman or you make out the report sheet on the apprentice, and that it be made out honestly, and actually he should make comments about the man's ability, and this gives the employer more to go on. I would say that our drop-outs are very few because of this. We don't want other than good mechanics. We are now at the point of getting real fine, qualified people in our programs, and I think if they do drop out it happens in the first year."

Mr. Helldoerfer: "Are there any questions from the floor?"

Mr. Merle Patterson, Member, Electrical J.A.T.C., Akron, Ohio, asked "What percentage of drop-outs are you talking about?"

Mr. Helldoerfer: "I would say you lose two out of ten."

Mr. Patterson: "Our drop-outs were minus five over a ten year period."

Mr. Helldoerfer: "That is real fine."

Mr. Patterson: "We have five year courses."

Mr. Helldoerfer: "Mr. Blankenship, should unionism be taught in regular programs or separately?"

Mr. Blankenship: "In the past few years I have changed my mind on this. I have always thought that unionism should be taught right along with the journeyman program. I still believe that basic unionism could be tied in with the training program. However, I believe that both subjects are entirely . . . well, that you are going to have 8,000 hours, and you have hardly enough time to teach either of them, so I would say to this extent that some of the basic principles of unionism should be brought into the class. However, if it is necessary to teach unionism, lets set up separate classes and not interfere with the training program. I must say, if asked this same question five years ago, I might have answered differently."

Mr. Patterson: "The state school board will not allow unionism taught in the public schools."

Mr. Paul Snyder, Consultant, Trade and Industrial Education, Dayton, Ohio, "I have never had any rules or regulations laid out for me on these classes. You have to realize that the school board is very sensitive to public opinion. Now, I don't know of any state laws, you see the money comes to the state government to us. The fund out of which your instructors are paid comes from the Federal government. We have to put public funds into these classes. If a taxpayer should file suit against us, then you could get the answer to this particular question. It has never been challenged in Dayton."

Mr. David Snead, Bohn & Snead, Inc., Dayton, Ohio, remarked: "I would like to say that certain people look on the word 'unionism' as a dirty word. It is not a dirty word because to me unionism is that we must work with them and not the contractor and against the union, but with the basic principle of working together for our common good."

Mr. Helldoerfer: "What about basic management? Can it be covered in this training program?"

Mr. Snead: "I don't think so. Regarding basic management do you mean management directly? As far as customers relationship is concerned? I think that when you send a man out to call on a customer he should create a good customer relationship while on the job."

Mr. Helldoerfer: "It is a matter of keeping records and helping to know something of the management requirements in the field, and it seems to be important as a part of the field work."

Mr. Snead: "There should be certain records. No, I don't think it should be. . . ."

Mr. Helldoerfer: (Interposing) "What should be the status of a returning serviceman who was drafted shortly after his probationary period?"

Mr. Blankenship: "My opinion is that the returning serviceman is in two catagories. If he did qualify during the probationary period he has been accepted into the program. I believe when he returns there are two factors. One is, Has he taken any electrical training? Many times this is done in the Navy, and also the Air Force, and in my opinion, he should be given an examination on his return and placed in the category where he best qualifies; however, if he hasn't had further training in the service, it is unfortunate, and in that case, he would have to begin where he left off. That is my personal opinion."

Mr. Phillips: "I think there is a good question here. It is one of legalities. I think you are obligated to keep his place for him. His military service doesn't disqualify him. I think you must reserve a place for him. I did think he would have to reapply within sixty days (60) days of the termination of his military service, and if he doesn't, he then forfeits his standing in the program. This is one of the requirements of the G.I. Bill, that he would have to apply within ninety (90) days, or so."

Mr. Helldoerfer: "Roy, this is for you. What do you think of paying over the scale for apprentices?"

Mr. Hauck, Cincinnati, Ohio, "I am looking at it from two angles. This was policy with some people and that is that always two months before he was going up, to give him a little raise. The minute he might

get some additional money every apprentice in the class finds out, and they get unhappy. I think in fairness to everyone he should be paid the going rate and stay with it because the guy you aggravated somewhere along the line will be a journeyman some day.

"In answer to this business of the next time an apprentice comes in and says 'I did not get it', I do tell the man that the other man did show enough initiative, and I show him that I would be happy to do for him the same as I did for the other boy. And this makes him try harder, and he will produce this little bit more for you, this little spark of initiaitve. And if you penalize the boy by taking away the initiative, and take it away from him to give it to somebody else who is sitting there on his fanny, well, a man won't do better if you take something away in this manner."

Mr. Blankenship: "If you do this in an area it is a different matter. You do get into this sort of thing. There are a lot of different opinions on this, and there might be other opinions. . . .

A remark was made from an unidentified person: "Along this line, I think we might very well build this same fire under all our journewmen. I believe if they sign a contract to work under certain wages they are entitled to the same per hour and the same number of hours. I don't know of anything that will put knives in another's back more quickly. It, I don't think it is a fair situation."

Mr. Robert W. Bertke, N.E.C.A., Cincinnati, Ohio, "In answer to that, you do have the same competition. These journeymen do show ability and end up in your supervisory places. They will supervise in the contractor's office sooner or later. I am in competition every day, and we try to do our job a little bit better than the others do. It goes right back to initiative, and if you don't get compensation for your initiative, then what is the use of going out and working."

Mr. James E. Golden, Electricians, J.A.T.C., Columbus, Ohio, "Mr. Kistner knows about me. I am Jim Golden from Columbus, and I agree with his statements somewhat. I would like to say we are not here to create a 'tongue war', and we are not here to baby our apprentices either.

"Number one, the boy is a four year apprentice. I go over here, and I know of cases where a boy makes a $1.80 per hour, and the contractor raises him to $1.90 per hour, which might be ten cents higher than he should make, and he goes and tells the other boys in the class 'I am making $1.90 for this certain contractor', and I don't think this is right. I agree that he serves a four year apprenticeship, you don't baby these boys, you do make them good men. You don't care what they do as long as they turn out as a good electrician. The next year the boy next to him that doesn't get a raise might turn out to be a better man than he is. We don't try to baby them. They are here to learn to be an electrician."

Mr. Blankenship: "In the district which I cover we have forty-seven apprenticeship programs. In a few of these cases they have paid apprentices over the scale. I can't think of anything for this, and I have never known in one single case where it hasn't caused trouble when you start paying apprentices more than they are entitled to. It causes trouble in every single case that comes to our attention."

Mr. Hauck: "I think they are forgetting one thing. That is, when and any time you go to a bargaining table for wages that is a minimum

wage that you pay your general foreman and right on down to the apprentice, it is a minimum wage and if a contractor so sees fit to pay him five cents or ten cents more on the hour, well, J.A.T.C. isn't. Don't pay that man one cent per hour less than that negotiation was signed for!"

Mr. Phillips: "I would like to make this point, reward and proper attitude enter into this. And I might say, we overlook the fact that the contractor only sees one phase of the boy's operation. A businessman might think he should be on a higher scale. The Joint Committee should decide the bid of apprentices . . . some of these things are already made and set down for you. The committee should control the apprentice wage. If you want to control the apprentice you control his pocketbook."

Mr. Wells: "I believe this, we are in this to build good apprentices into good journeymen. We do have problems, yes. We only have room for so many apprentices. We don't take in all of the apprentices that everybody wants. I believe there should be certain rules set up as to how many we are going to take in. That depends on the contractors and the union. How many can we provide work for? We have certain contractors who say we need apprentices to build it up, so when you have one graduate, give him to us. I feel this way, that we should analyze the thing and that our committee members should be instructed as to what they think, and if they need ten or eleven people to make up the losses, I don't believe we should ask the committee for thirty, or fifty, or even eleven or twelve.

"The contractor has a different feeling about this than we do. They take an apprentice and sometimes they get rid of him right before he becomes a journeyman and they let him go. And the contractors on this committee, the contractors do have an idea of loading up knowing that when they are through with them they know this is what we have. When they come into the local union we have them from that day forward."

Mr. Helldoerfer: "Anything further on this? All right. There was one question here interested me. 'Which is the best period of time of day to carry on the instruction program?' 'Day time or night time?' "Dave."

Mr. Snead: "I just can't answer that for you."

Mr. Helldoerfer: "Paul, what about that?"

Mr. Snyder: "We have an apprenticeship day program, and all others are on the night program. At one time there was a daylight class. But, due to certain difficulties on the jobs it was changed to night. I don't see a whole lot of difference. The apprentice might be tired in the evening after a full days work. We do have other people on the adult program and they work just as hard and drive, and are very interested in the program.

"On the other hand you have to make the apprenticeship program attractive enough that we might feel he is getting something from it. You have a weak contractors' association in this program. You have a strong union and a strong contractor. If you have a representative really working you will have a very large amount of interest in that program. I will say this, if you have a joint committee you must have representation."

Mr. Helldoerfer: "Harry, what about the day or night program?"

Mr. Wells: "Do we want to take in people whom we have to pay to go to school? I believe we get an entirely better type of apprentice when we require him to put something into the program. We have had a program where they went to school in the daytime and they felt that somebody was taking their freedom from them when they were asked to go to school at night. But these other boys are rather happy, and I would go so far as to say they were real happy that they are going into that, not because they have four hours to spend in school, and a lot of times they want to stay overtime and get into the meat of the thing. These boys that we have in there now feel, and I feel that whether or not they go to school in the day or night time is irrelevant. In my opinion I don't believe the apprentice should be given an opportunity to go to school at somebody else's expense and get paid also for going there too."

Unidentified party: "I don't agree with that. In an area like Cleveland . . . I can't help but feel that a night program would be out of the question. By running a day school you would have access to full time instructors. The wage scale in our area, it is such that it is comparable to four days pay. You can't come up with an unqualified answer and say that a boy is being paid for something he doesn't earn. It is true that labor is up considerably for the employer but we find in our area that the day school seems to work out best for us, and it depends upon your local school board; and we have had a lot of cooperation in our area. They have full time instructors whom, I feel, give you a better teaching situation."

Mr. Blankenship: "Gentlemen, I do have a plane to catch. I want to say that I am very happy to be with you here today. If you will excuse me I will leave now and make a run for the plane."

Mr. Helldoerfer: "Thank you very much Mr. Blankenship. It is a pleasure to have been with you today."

Mr. Hagar, Cincinnati, Ohio, "Could I go back and say, at Washington we did have a meeting of the E.M.C.A., and I.A. and they recommended that employment should be the total of the disabled, deceased, and entire journeymen through that particular year, plus the other percentage. . . ."

Mr. Helldoerfer (Interposing) "I am sorry, it has been about three hours, and it is a pretty long session for today. I think this is very fine, and I thank you for this. I would like now to close this meeting."

GRAPHIC ARTS INDUSTRY

Wednesday **October 27**

OPENING REMARKS

R. Reid Vance, Executive Secretary, Printing Industry of Ohio, Member, Ohio State Apprenticeship Council, Columbus, Ohio

CHAIRMEN

Ken Morse, Jr., Assistant to Personnel Manager, Reynolds & Reynolds Company, Dayton, Ohio

Daniel Beatty, Vice President, Allied Printing Trades Council, Dayton, Ohio

DISCUSSION LEADERS

Howard Massman, Printing Trades Coordinator, High School and Technical Education Program, Dayton, Ohio

Kemp Allemang, Supervisor of Employment, McCall Corporation, Dayton, Ohio

William L. Stickney, Administrative Assistant, Printing Industry of Ohio, Columbus, Ohio

Irvin G. Feldman, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cincinnati, Ohio

CONSULTANTS

William Stover, Representative, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio

William Stewart, Representative, Trade and Industrial Education Service, Ohio Department of Education, Cincinnati, Ohio

R. Reid Vance, Executive Secretary, Printing Industry of Ohio, Member, Ohio State Apprenticeship Council, Columbus, Ohio

Irvin G. Feldman, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cincinnati, Ohio

GRAPHIC ARTS INDUSTRY

(First and Second Sessions)

Mr. R. Reid Vance, Executive Secretary, Printing Industry of Ohio, and Member, Ohio State Apprenticeship Council, Columbus, Ohio, opened the meeting at 9:15 A. M. with a few words of welcome and then introduced the Chairman for the morning session, **Mr. Ken Morse, Jr.,** Assistant to the Personnel Manager, Reynolds & Reynolds Company, Dayton, Ohio.

Following brief introductions of individuals attending the meeting, Mr. Morse introduced **Mr. Irvin G. Feldman, Representative,** Bureau of Apprenticeship and Training, U. S. Department of Labor, Cincinnati, Ohio. Mr. Feldman discussed recent federal legislation (generally referred to Title 29) designed to afford equal apprenticeship opportunities for all individuals, including the areas of race and religion. It was also noted that worthwhile contributions can be made in this respect by the effective use of joint-apprenticeship committees.

Mr. Kemp Allemang, Supervisor of Employment, McCall Corporation, Dayton, Ohio, was next introduced and reviewed the selection system of apprentices at the McCall Corporation. In this organization, emphasis is placed in obtaining the most qualified person. Mr. Allemang outlined the existing methods. The last discussion leader to be introduced by Mr. Morse was **Mr. William L. Stickney,** Administrative Assistant, Printing Industry of Ohio, Columbus, Ohio. Information was presented relating to the reasons for testing in the apprenticeship program. Emphasis was placed on the need for the graphic arts industry to survey and utilize a testing program that best meets its needs. Mr. Stickney brought along several types of tests and other related information that were available and examined by the group members.

Following the presentation and informal question and discussion period lead by Mr. Morse ensued. Twenty individuals were in attendance.

* * *

At approximately 1:30 P. M. **Mr. Vance** introduced the Chairman for the afternoon session, **Mr. Daniel Beatty,** Vice President, Allied Printing Trades Council, Dayton, Ohio. Mr. Beatty then introduced the Discussion Leader, **Mr. Howard Massman,** Printing Trades Coordinator, High School and Technical Education Program, Dayton, Ohio, and the four consultants, **Mr. Vance, Mr. Feldman, Mr. William Stover,** Representative, Trade and Industrial Education Services, Ohio Department of Education, Columbus, Ohio, and **Mr. William Stewart,** Representative, Trade and Industrial Education, Ohio Department of Education, Cincinnati, Ohio.

Mr. Massman lead the group utilizing the conference technique in determining the skills required to enter the graphic arts trade as well as the methods an individual may use to up grade himself on the job. An outline of a new test that is being constructed by the Trade and Industrial Education Services, Ohio Department of Ed-

ucation, Columbus, Ohio, was presented to the group. It is planned that the test will be given on a nationwide basis to graphic arts students. Suggestions for improving the outline were requested by Mr. Massman and a constructive discussion followed.

This was followed by Mr. Massman leading the group in a discussion concerned with future training in the graphic arts field. Considerable interest was focused by the group in the relationship of technical schools and vocational schools with the overall graphic arts program.

Upon concluding the discussion, the meeting was adjourned at approximately 4:15 P. M. Nineteen individuals were in attendance.

INDUSTRIAL MAINTENANCE TRADES

Wednesday **October 27**

CO-CHAIRMEN

Willard G. Thuma, Labor Relations, Frigidaire Div., G.M.C., Dayton, Ohio

Lester Irvin, Chairman, Skilled Trades, I.U.E. - (GMC) Plants, Dayton, Ohio

PANEL MEMBERS

J. J. Eyre, Manager, Eng. Squadron & Apprenticeship Program, Goodyear Tire & Rubber Company, Akron, Ohio

E. R. Elkins, Director, Skilled Trades, U.R.W. International Union, Akron, Ohio

John P. Heinz, Apprentice Coordinator, Ford Motor Company (Foundry & Engine Div.), Cleveland, Ohio

Robert J. Usher, Chief Training Branch, N.A.S.A.—Lewis Research Center, Cleveland, Ohio

SECRETARY

Mrs. Ray Lesniok, I.U.E., Local 707—AFL-CIO, Cleveland, Ohio

CONSULTANTS

Dr. D. H. Price, Department Head, Trade & Industrial Education, University of Cincinnati, Cincinnati, Ohio

Ralph C. Neal, Apprentice Training Consultant, Ohio State Dept. of Education, Columbus, Ohio

William J. Kacvinsky, Representative, Bureau of Apprenticeship & Training, U. S. Department of Labor, 386 The Arcade, Cleveland, Ohio

Richard Swain, Representative, Bureau of Apprenticeship & Training, U. S. Department of Labor, Detroit, Michigan

INDUSTRIAL MAINTENANCE TRADES

First Session

At 1:00 P.M., conferees assembled in the hotel lobby of the Sheraton-Dayton for transportation to the Frigidaire Division, G.M.C. Plant in Dayton where their first session was held. The meeting was called to order by **William J. Kacvinsky,** Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio. Mr. Kacvinsky welcomed the delegates to the 15th Annual Ohio Apprenticeship Conference and thanked **Mr. Willard Thuma** for the extensive and interesting plant tour of the Frigidaire Refrigerator Appliance Division. He also expressed his thanks to **Mr. Lester Irvin,** Chairman, Skilled Trades, I.U.E. (GMC) Plants, Dayton, Ohio, for his help in arranging the tour.

Mr. Kacvinsky then introduced Mr. Willard Thuma, Labor Relations, Frigidaire Division, G.M.C., Dayton, Ohio who discussed apprentice selection at Frigidaire by the point system. He stated that one of the most important facets of a good apprentice is a thorough screening. At Frigidaire they have a uniform method of selecting apprentices, and have had no problems with discrimination. Selection of apprentices must be in order of rank at the time of selection. Ranking lists can change daily, weekly, monthly, by the highest scoring apprentice being put on top of the ranking list.

"To initiate the original apprentice program, records were kept on 1,400 journeymen. This material was then computed and evaluated, and from this information we determined which tests to use in our apprentice selection. The new law says that notices must be posted with schools, the Board of Education, and the Ohio Employment services when you are establishing selection of apprentices.

"Our program requires non-employees to be 18 to 26 years of age; employees 40 years or younger must have no physical limitations to perform the trade or craft he chooses. Apprentices must be a high school graduate, or equivalent, with at least a C average. The apprentice also must provide a transcript of his scholastic grades before selection, from his school records. Our applicants may make three (3) craft choices. He will not necessarily be given the craft of his choice, this is determined by his scores on his tests.

"On selection of apprentices, we must make people aware that there are unscrupulous schools who will train people to take tests for training programs. The people who enroll in these schools may score high on evaluation in these tests, but do not necessarily make good apprentices. In fact, many know nothing about a craft. They also fail as apprentices."

A delegate from Thompson Ramo Wooldridge, Inc., Cleveland, Ohio, asked if the tests given by Frigidaire were standard tests. Mr. Thuma answered yes, but said that they will not give this information to the public. If they did, a person could study for the testing and as a result score high and not necessarily be good craft material. Mr. Thuma then introduced Mr. Lester Irvin, Chairman, Skilled Trades, I.U.E., (GMC) Plants, Dayton, Ohio, for a few remarks.

Mr. Irvin went on to explain the need for better understanding of apprentice selection today. He said that years ago a person was just put on the job as a helper and then became a journeyman if he could perform the work. The equipment of today will not permit this. It is too complex and too technical. That is why it is very important to have a good selection program for apprenticeship training. It must be kept uniform and meet the needs and standards of todays complex methods.

Mr. Richard Swain, Bureau of Apprenticeship and Training Representative, U. S. Department of Labor, Detroit, Michigan, asked what the breakdown was on points.

Mr. Lester Irvin explained that they have an 8,000 hour program. The apprentice is paid his hourly rate for 4 hours of related instruction at Patterson School, this is during working hours. Each apprentice is given approximately a $37.50 tool allowance also. The schools will cooperate completely with their needs of apprenticeship training.

Mr. John P. Heinz, Apprenticeship Coordinator, Ford Motor Company, Foundry & Engine Division, Cleveland, Ohio, asked how many hours of related instruction was given to the apprentices at Frigidaire. Mr. Irvin answered that 672 hours of related instruction was given at Patterson School of Dayton.

Mr. J. J. Eyre, Manager, Engineering Squadron & Apprenticeship Program, Goodyear Tire and Rubber Company, Akron, Ohio, asked how the apprentice received his automatic increases. Mr. Irvin explained that he received them every 916 hours.

Mr. Ray Lesniok, Representative, I.U.E., Local 707, Cleveland, Ohio, asked if the apprentice receives his journeyman card after 8,000 hours or is he required to work 1,000 hours additional. Mr. Irvin explained that he receives his journeyman card after 8,000 hours. No additional hours are required.

Mr. Kacvinsky then stated that he hated to interrupt the open discussion but it was necessary to adjourn this meeting in order to load the bus for the trip back to the hotel so that the bus could beat the rush hour traffic and get the conferees back in time for the evening banquet. The meeting adjourned at 3:50 P. M.

IRONWORKING TRADES

Wednesday **October 27**

CO-CHAIRMAN

James A. Watters, Sr., Chairman, Ironworkers Joint Apprenticeship Committee, Member, Ironworkers L.U. #290, Dayton, Ohio

Herbert Henry, Representing, Maxon Construction Company, Dayton, Ohio

SPEAKERS

D. A. Samuelson, President, A. G. Samuelson Construction Co., Springfield, Ohio

J. W. Hardesty, Apprenticeship Director, International Association of Bridge, Structural and Ornamental Ironworkers, A.F.L.-C.I.O., St. Louis, Missouri

PANEL MEMBERS

The members of the Dayton Area Ironworkers Joint Apprenticeship Committee:

James A. Watters	Lester Detrich
Edward Binegar	Charles Davis
Richard Hopkins	Mac McCallum

CONSULTANTS

Dr. Charles Nichols, Representative, Trade and Industrial Education Service, Ohio Departmental of Education, Kent, Ohio

James Noel, Representative, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio

Harry S. Quine, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Akron, Ohio

IRONWORKING TRADES

(First & Second Sessions)

Co-Chairman **James A. Watters, Sr.,** Iron Workers, Local 290, Dayton, Ohio, opened the conference by welcoming the conferees to Dayton and then he gave a brief outline of the program for the day.

As first speaker, he introduced **Mr. J. W. Hardesty,** Apprenticeship Director, Int'l. Association of Bridge, Structural and Ornamental Ironworkers, AFL-CIO, St. Louis, Missouri. Mr. Hardesty stated that the selection of apprentices for the trade had been done entirely by local Joint Apprenticeship Committee action and selection standards had been flexible according to individual committee operations.

"Now there are Federal and State regulations which bring the selection of apprentices into line with Equal Employment Opportunity requirements of both State and Federal laws. In these selection standards there are now several basic requirements; non-discrimination clause; selection according to qualifications and dissemination of information regarding applications. This information must include the number of openings and the date, place and time of application.

"In June of 1964 a package suggesting selection procedures was mailed to all local unions and apprenticeship committees. It outlined the State and Federal regulations, selection procedures to be followed and samples of applications, applicant evaluations, tests, and a form for the dissemination of information on applications. The law says that the local employment service and local schools must be notified. This may be done either directly or by notifying the local B.A.T. Representative, or the Apprenticeship Information Center if there is one in the community.

"In the final selection of applicants the points for relatives are out in spite of the efforts of the International Union." Mr. Hardesty read a list of Ohio JAC's to secure information on those who are in compliance with E.O. Regulations or the reasons why not. Material was mailed to the JAC's from the Iron Workers International Office and they contained the entire procedures for Equal Employment Opportunity compliance.

Mr. Hardesty stressed the importance of adopting National Pattern Standards by local JAC's so that there would be uniformity in the training.

The International Union is preparing a folder containing all material on apprenticeship to date. When it is approved a copy will be sent to all local unions and JAC's. This folder is in work at the present time, but there may be changes before it is issued. The folder is designed as a handbook to JAC's and contains material which will assist them in making decisions in the operation of apprenticeship programs.

Mr. Hardesty touched briefly on the history of apprenticeship both in general and in the Iron Workers trade. At the 1951 convention, President Lyons started action on developing essential standards to be included in the constitution as a guide for local unions. This

was done at the 29th convention. In 1955 the National Apprenticeship Director was appointed to coordinate apprenticeship activities for Iron Workers throughout the country and to develop material to assist local committees in operating their programs. The standards were flexible and there were no definite selection requirements.

"In 1964 the apprenticeship standards were removed from the constitution, since by that time there were both U. S. and State apprenticeship laws and regulations passed concerning apprenticeship.

"Pattern standards were developed and sent out to all locals and JAC's. These pattern standards are still flexible and are to be regarded as a sample. The International Union does not dictate to the local unions, but they do point out what they find best and make recommendations accordingly.

"In considering the objectives of apprenticeship, there are four bodies involved; the employer, the industry, the union and the apprentices."

In answer to questions from the floor Mr. Hardesty stated that the transfer of membership of the apprentices between unions should be done in accordance with the constitution. He also stated that JAC reports to local union meetings are not required but are highly recommended, to keep the membership advised of the current activities and problems of the Joint Apprenticeship Committee. These reports should be given under "good and welfare."

Mr. D. A. Samuelson, President, A. G. Samuelson Construction Co., spoke on the subject "Is the Program Important to the Contractor?"

Mr. Samuelson remarked that as a former member of Local 290 he had a good understanding of the people and their problems in the Iron Workers field and that he had a personal view as well as views as an employer. As an employer's view of apprenticeship he made several points on applicant qualificatios. First, the applicants must have potentials for the trade. It is nice if he is a good fellow, but he must have personal qualifications. Education is important in terms of the man's ability to become a qualified journeyman. He must have the mental qualities to learn on the job and in the related classes. The man must want to learn the trade, aside from earning joureyman's wages.

In addition to the work of the trade the man must be safety conscious and be aware of the value and need for good workmanship. Accidents are costly to the employer, the union and the man. Industrial compensation is a burden to the industry as a part of the overhead, but there is no real compensation for accidents.

In the related classes the instructor must inspire the man to learn and develop a continuous interest in learning. The instructor must be tolerant of younger people and must have the knowledge and have ability to transmit it to the apprentices. If possible, he should have special instructor's training. Iron Workers are builders, and are creative, they must have pride of workmanship.

Mr. Samuelson came from a family of bricklayers and he considered the pride or workmanship was fifty per cent of their qualifications.

Big jobs are fine, but they are a small percentage of the con-

sidered total, and in apprentice training attention should be paid to the needs of small employers.

Management must participate more actively in the development of their operations of apprenticeship programs, as well as furnish the necessary funds. Rules and regulations are necessary, but the industry must develop their own manpower to meet its own needs. They must sell the trade to apprentices. Work is now being lost due to lack of competent manpower. The industry sells services, but manpower and not equipment is the problem. The employers are seriously interested in apprenticeship and are more than willing to cooperate.

Mr. McDonald, Iron Workers, Local 17, Cleveland, Ohio, gave his views on present problems affecting workers in his area which included minority problems. Cleveland has minority problems which will increase with time. The Government encourages minority group individuals to move into the construction trades. They had no great previous interest in these trades.

The Cleveland J.A.C. has adopted E.O. selection procedures, but the turnout from the minority groups has been very disappointing. They had 50 applicants of whom 10 were negro. In spite of lowering entrance standards, only one Negro qualified and is now on the program. The pressure from minority group organizations is still on, especially on Federal construction. There are still a number of conflicts with labor. Cleveland has an examination coming up for both apprentices and journeymen, and they will stick to qualifications for both types of men. The minority problem affects the larger cities now, but will come up in smaller cities very soon.

Mr. Walter Moore, Local 17, Cleveland, Ohio, stated that they have had good results from their program. The last group of applicants numbered 150. Sixty showed for instruction, 49 applied for the tests, 30 were interviewed and 19 accepted. With better selection absenteeism dropped and Cleveland now has 98 per cent attendance in related classes. In training the apprentice on the job he should be shown not only "How" but "Why". If a man is working under a permit, he should be kept off work involving Federal funds. Mr. Moore has found that apprentices lacked knowledge of the conditions which prevail in the construction industry and did not understand lost time due to the fluctuation of work.

Also the sponsors lack information in promoting applications for apprenticeship. Following the above remarks, the Chairman called for questions or discussions from the floor. There was active participation by all the conferees until the Chairman closed the discussions for lunch.

* * *

Co-Chairman **Herbert Henry,** Maxon Construction Company, Dayton, Ohio, opened the afternoon session, and after brief remarks he again introduced Mr. Hardesty who reviewed and expanded on his presentation in the morning session.

He again referred to the apprenticeship manual which is being prepared by his office. The manual will contain a number of sections which cover important factors in the operation of apprenticeship programs. He considers the indoctrination of apprentices to be very important, and that section has information and instructions for the guidance of the apprenticeship committee.

There is a section on Joint Apprenticeship Committee rules for the operation of the program. It contains the rules that govern both the apprenticeship committee and the apprentices, and suggests penalties for the infraction of the rules. The apprentices must be under the control of the J.A.C. at all times.

There is also a list of tools to be purchased by the apprentices during the term of apprenticeship. Included also is an article on apprenticeship by Robert M. Earley, Bureau of Apprenticeship and Training. This article was published in the "Iron Worker" in August 1964 and Mr. Hardesty recommends that this be read by all apprentices. He also read "One Dozen Ways to Cancel Your Apprenticeship Agreement." He then asked for questions from the floor.

There was a floor discussion and questions regarding the value of the manual. Its correct name is "Reference Manual and Guide on Establishment and Operation of Iron Workers Apprenticeship Program." Mr. Hardesty hopes to have the manual ready by February 1966.

A representative of the Cincinnati Apprenticeship Information Center visited the afternoon session. He stated that his purpose in being present was to secure information for screening applicants for the Iron Workers trade. He explained the operations of the A.I.C. in screening and referring applicants to particular trades.

There was a general discussion involving very active participation by all conferees and covering many subjects bearing on the operation of apprenticeship programs; apprentices completing before their time; instructional materials used by instructors; up-grading and procedures, and effect on deferment; Manpower Development and Training Act as applied to the construction industry; incentives for training, laws in Congress, tax deductions; non-union shops; union problems; Right to Work Laws; affect of automation on Iron Workers; compensation of instructors.

There is a trend for Iron Workers J.A.C. to set up their own related facilities. The reasons were explored together with the advantages and disadvantages.

Mr. Henry closed the session with his thanks to the conferees for their attendance and for their participation in a very interesting conference.

Meeting adjourned 4:45 P. M.

MACHINE, TOOL & METAL TRADES

Wednesday **October 27**

OPENING REMARKS

Gerald D. Biddle, Member, Ohio State Apprenticeship Council, and International Representative, Skilled Trades Department, U.A.W., C.I.O., Toledo, Ohio

CHAIRMAN

John Sieger, Manager of Training, Ford Motor Company, Dearborn, Michigan

SPEAKER

Roy Harp, Training Specialist, Ford Motor Company, Stamping Plant, Bedford, Ohio

PANEL MEMBERS

Joseph Milgski, Jr., M.E.S.A.—Local #4, Toledo, Ohio

George E. Freiberger, Chairman, Skilled Trades Committee, Local 87, U.R.W., Dayton, Ohio

Frank Gagliardi, Representative, Skilled Trades — U.A.W.-C.I.O. Cleveland, Ohio

John Sieger, Mgr. of Training, Ford Motor Company, Dearborn, Michigan

H. E. Meeker, Personnel Mgr., International Harvester Co., Springfield, Ohio

Roy Harp, Training Specialist, Ford Motor Co. (Stamping Plant) Bedford, Ohio

CONSULTANTS

Robert M. Reese, Trade and Industrial Education, Ohio State University, Columbus, Ohio

Oscar R. Poole, Representative, Bureau of Apprenticeship and Training, U. S. Dept. of Labor, Cleveland, Ohio

MACHINE, TOOL & METAL TRADES

(First Session)

Mr. Gerald D. Biddle, Member, Ohio State Apprenticeship Council, International Representative, Skilled Trades Department, U.A.W., C.I.O., Toledo, Ohio, introduced members of the panel and welcomed them to the 15th Annual Ohio Apprenticeship Conference sponsored by the Ohio State Apprenticeship Council.

He then turned the meeting over to **Mr. John Sieger**, Manager of Training, Ford Motor Company, Dearborn, Michigan, who was to serve as Chairman of the Session.

Mr. Sieger: "We are meeting here today because of our interest in apprenticeship. Most of us have been engaged in this activity for many years. The importance of qualifications and selection of apprentices are factors which make for successful apprenticeship.

"Today, **Mr. Roy Harp,** Training Specialist, Ford Motor Comany Cleveland Stamping Plant, will talk to you about: Apprenticeship Qualifications and Selection."

Mr. Harp: "Thank you, Mr. Sieger. It is indeed a pleasure to be at this 15th Annual Apprenticeship Conference.
